Feed

Aug., 1912. 6 to 11 lbs. grain daily of the following mixture: 50 lbs. each bran, corn meal, cotton seed meal, and linseed meal, 16 lbs. Ajax Flakes, with 3 lbs. bran and 1 lb. ground oats added on 10th and 11th; 1 to 3 lbs. beet pulp, 5 to 10 lbs. green corn, 5 to 10 lbs. green cow peas and soy beans, 5 to 8 lbs. alfalfa, pasture.

Sept., 1912. 12 lbs. average grain daily of the following mixture: 50 lbs. each bran, corn meal, cotton seed meal, and linseed meal, 16 lbs. Ajax Flakes; 2 to 4 lbs. beet pulp, 10 to 15 lbs. green corn, 10 lbs. green cow peas and soy beans from 1st to 5th, 10 to 15 lbs. green soy beans from 5th to 30th, 5 lbs. mangels from 20th to 30th, 10 to 11 lbs. ensilage, 7 lbs. alfalfa hay with pasture.

Oct., 1912. 12 lbs. average grain daily of the following mixture: 100 lbs. wheat bran, 50 lbs. each corn meal and cotton seed meal, 150 lbs. Ajax Flakes, 25 lbs. linseed meal; 124 lbs. beet pulp, 4 lbs. roots, 388 lbs. green corn, 339 lbs. green soja beans, 363 lbs. ensilage, 33 lbs. soja bean hay, 199 lbs. alfalfa hay, oat and clover pasture.

Nov., 1912. 11.5 lbs. average grain daily of the following mixture: 10 lbs. wheat bran, 50 lbs. each corn meal and cotton seed meal, 160 lbs. Ajax Flakes, 25 lbs. linseed meal; 90 lbs. beet pulp, 96 lbs. roots, 182 lbs. green corn, 62 lbs. green soja beans, 460 lbs. ensilage, 104 lbs. soja bean hay, 150 lbs. alfalfa hay, Canadian peas and wheat, oat and clover pasture.

Dec., 1912. 11.5 lbs. grain daily same ration as given in November; 101 lbs. beet pulp, 198 lbs. roots, 49 lbs. corn fodder, 559 lbs. ensilage, 156 lbs. soja bean hay, 183 lbs. alfalfa hay.

Jan., 1913. 10 lbs. average grain daily of the following mixture: 100 lbs. wheat bran, 50 lbs. each corn meal, cotton seed meal, and linseed meal, with 1 lb. ground oats added after 2d; 4 lbs. average beet pulp, 105 lbs. corn fodder, 29 lbs. roots, 601 lbs. ensilage, 90 lbs. soja bean hay, 281 lbs. alfalfa hay.

Feb., 1913. 8 lbs. grain daily of the following mixture: 50 lbs. each bran, corn meal, cotton seed meal, and linseed meal, with 1 lb. ground oats added; 119 lbs. corn fodder, 139 lbs. beet pulp, 66 lbs. roots, 598 lbs. ensilage, 306 lbs. alfalfa hay.

Mar., 1913. 8 lbs. grain daily same ration as given in February with 1 to 2 lbs. ground oats added; 155 lbs. beet pulp, 215 lbs. roots, 112 lbs. corn fodder, 622 lbs. ensilage, 333 lbs. alfalfa hay.

Apr., 1913. 7 lbs. average grain daily same ration as given in February with 33.5 lbs. bran and 50 lbs. ground oats added; 45 lbs. beet pulp, 119 lbs. roots, 296 lbs. green feed, 462 lbs. ensilage, 272 lbs. alfalfa hay.

May, 1913. 7 lbs. grain daily same ration as given in February with 1 lb. bran and 2 lbs. ground oats added; 79 lbs. beet pulp, 629 lbs. green feed, 465 lbs. ensilage, 279 lbs. alfalfa hay.

June, 1913. 7 lbs. grain daily same ration as given in February with 1 lb. bran and 2 lbs. ground oats added; 90 lbs. beet pulp, 890 lbs. green feed, 450 lbs. ensilage, 270 lbs. alfalfa hay.

July, 1913. 7 lbs. grain daily same ration as given in February with 1 lb. bran and 2 lbs. ground oats added; 93 lbs. beet pulp, 930 lbs. green feed, 450 lbs. ensilage, 279 lbs. alfalfa hay.

Aug., 1913. Same ration as given in July.

Feed

Sept., 1912. 4 to 13.5 lbs. grain daily of the following mixture: 50 lbs. each wheat bran, corn meal, and cotton seed meal, 150 lbs. Ajax Flakes, 25 lbs. linseed meal with 3 lbs. bran and 1 lb. ground oats added from 7th to 11th and 1 to 12 lbs. corn meal from 12th to 30th; 47.5 lbs. beet pulp, 170 lbs. green corn, 58 lbs. green alfalfa, 102 lbs. ensilage, 48 lbs. alfalfa hay with pasture.

Oct., 1912. 14 to 16 lbs. grain daily of the following mixture: 100 lbs. wheat bran, 50 lbs. each corn meal and cotton seed meal, 150 lbs. Ajax Flakes, 25 lbs. linseed meal, with .5 lb. ground oats added from 8th to 21st, and .5 lb. corn meal from 22d to 31st; 108.5 lbs. beet pulp, 10 lbs. roots, 8 to 16 lbs. green corn, 4 to 8 lbs. ensilage, 2 to 3 lbs. soja bean hay, 2 to 5 lbs. alfalfa hay, oat and clover pasture.

Nov., 1912. 16 lbs. grain daily of the following mixture: 100 lbs. wheat bran, 50 lbs. each corn meal and cotton seed meal, 160 lbs. Ajax Flakes, 25 lbs. linseed meal with .5 to 1 lb. corn meal added; 108.5 lbs. beet pulp, 230 lbs. roots, 192 lbs. green corn, 76 lbs. green soja beans, 297 lbs. ensilage, 90 lbs. soja bean hay, 150 lbs. alfalfa hay, Canadian peas and wheat, clover and oat pasture.

Dec., 1912. 15 to 16 lbs. grain daily of the same ration as given in November with 1.5 lbs. corn meal added; 128 lbs. beet pulp, 222 lbs. roots, 49 lbs. shredded corn fodder, 403 lbs. ensilage, 146 lbs. soja bean hay, 184 lbs. alfalfa hay.

Jan., 1913. 15 lbs. grain daily of the following mixture: 100 lbs. wheat bran, 50 lbs. each corn meal, cotton seed meal, and linseed meal, 160 lbs. Ajax Flakes, with 2 lbs. corn meal and .5 lb. ground oats added; 5 lbs. beet pulp, 3 to 4 lbs. corn fodder, 2 to 4 lbs. roots from 22d to 31st, 16 to 14 lbs. ensilage, 6 lbs. soja bean hay from 1st to 16th, 7 to 11 lbs. alfalfa hay.

Feb., 1913. 15 lbs. grain daily of the following mixture: 50 lbs. each bran, corn meal, cotton seed meal, and linseed meal, 160 lbs. Ajax Flakes, with 2 to .5 lb. corn meal from 1st to 19th and .5 to 2 lbs. ground oats added; 140 lbs. beet pulp, 125 lbs. corn fodder, 104 lbs. roots, 280 lbs. ensilage, 306 lbs. alfalfa hay.

Mar., 1913. 15 lbs. grain daily same ration as given in February with 2 lbs. ground oats added; 5 lbs. beet pulp, 12 lbs. roots, 4 lbs. corn fodder, 10 lbs. ensilage, 11 to 9 lbs. alfalfa hay.

Apr., 1913. 15 to 14.5 lbs. grain daily same ration as given in February with 2 lbs. ground oats added; 5 lbs. beet pulp, 12 to 5 lbs. roots, 10 to 40 lbs. green feed, 10 to 7 lbs. ensilage, 10 to 9 lbs. alfalfa hay.

May, 1913. 14.5 to 14 lbs. grain daily same ration as given in February with 2 lbs. ground oats added; 5 lbs. beet pulp, 20 to 35 lbs. green feed, 7 lbs. ensilage, 9 lbs. alfalfa hay.

June, 1913. 14 to 13.5 lbs. grain daily same ration as given in February with 2 lbs. ground oats added; .5 lb. beet pulp, 35 lbs. green feed, 7 lbs. ensilage, 9 lbs. alfalfa hay.

July, 1913. 13.5 lbs. grain daily same ration as given in February with .5 lb. bran and 2 lbs. ground oats added; green corn and soy beans, cut corn after 14th, 35 lbs. green feed, 5 lbs. beet pulp, 7 lbs. ensilage, 9 lbs. alfalfa hay.

Aug., 1913. 13 to 13.5 lbs. grain daily same ration as given in February with .5 lb. bran and 2 lbs. ground oats added; 5 lbs. beet pulp, 35 lbs. green feed, (cow peas, soy beans, and green corn), 7 lbs. ensilage, 9 lbs. alfalfa hay.

Sept., 1913. 13 lbs. grain daily same ration as given in August; 5 lbs. beet pulp, 35 lbs. green feed, (cow peas, soy beans, and corn), 7 lbs. ensilage, 9 lbs. alfalfa hay.

Entry of Additional Record. Previous year's record as a five and a half year old: 9993.50 lbs. milk, 500.30 lbs. butter fat; as a six and a half year old: 11227.00 lbs. milk, 551.88 lbs. butter fat. Published in Vols. XXIV. and XXVI.

Manager

My Young Bulls are all sold.

May have some more shortly.

J. W. WEBB

Westbury, ... Long Island, N. Y.

Bethany, W. Va.

The Agricultural Guild

Offers for sale **at moderate prices** a few bull calves **good enough to head choice herds,** and at low prices. Bulls that will improve most herds. In herds belonging to the members of the Guild are found the following bulls :

Imported Border Raider

He is a show bull of very high quality, which he impresses on his calves. He carries 27 1-2 per cent. of the blood of May Rose II.

Dairymaid's Glenwood of Pinehurst 10548

His full sister is the second highest producing cow of the breed. His three tested daughters averaged 467 pounds of fat as two-year-olds.

Imp. Pride of Day 1849 P. S.

He was a King's Cup winner on the Island. His full sister produced 583 pounds of fat as a two-year-old. His calves are uniformly good.

Stranford's Glenwood of Pinehurst VII. 17392

This bull furnishes the best combination of the Selma, Dairymaid, Stranford Princess and Glenwood blood to be found. His calves are very choice.

Besides these great bulls, our herds contain sons or grandsons of Governor of the Chene, Masher's Sequel, Galaxy's Sequel and King of the May.

With the best of bulls, and over one hundred offlcially tested cows, we are in a position to breed Guernseys intelligently.

We are Breeders, not Dealers

We offer for your selection choice young bulls backed by good records. We price them worth the money.

We veal all bull calves that are not reasonably sure to improve the dairy stock of the country. We guarantee satisfaction.

All our Herds are Tuberculin Tested

Send for price lists to

Prof. William Hill, Bethany College

PERGUE FARM
GUERNSEYS

Are noted for their **true dairy type, good breeding** and **excellent producing qualities.**
Are you lookidg for a first-class herd header? If so, we can supply you at a very reasonable price. We are offering for sale the following:

Imp. Raymond of Sarnia,

who is a son of Raymond of the Preel IV. He also carries the blood of **Imp. Masher's Sequel,** who sired 39 A. R. Daughters. This excellent young bull was shown in 1912 and won **1st Prize and Junior Championship at Illinois, Iowa,** and **Minnesota State Fairs** and **International Dairy Show, Milwaukee.**

Washington of Maple Glen

dropped Feb. 10, 1912. Sire **George Washington of Fairfield Farm.** Dam is a grandmother of **Rutila's Gold Basis.** This young bull has the best May Rose breeding, and as an individual is second to none.

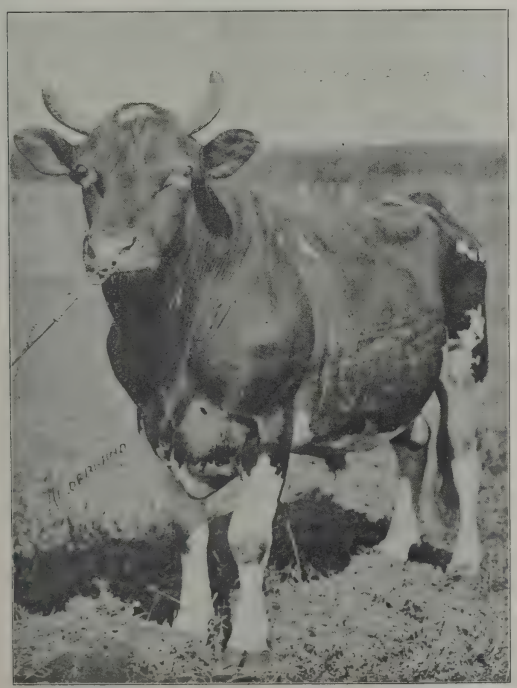
We are also offering a few Heifers and Young Cows and a limited number of young MAY ROSE Bulls

Write us your wants, or better still visit **Pergue Farm,** where you can select stock that will make you a profit as producers.

HERD TUBERCULIN TESTED

New Location. We have purchased 300 acres of fine land, located four miles west of Streator on the Peoria branch of the Chicago and Alton R. R. Our P O. address will not be changed, but our railroad station will be Munster after Mrrch 1st. Our dairy barns are located just opposite the depot at Munster and we have 6 trains daily so the farm is easily reached. For particulars address

SASS BROS., La Salle Co., STREATOR, ILL.



CHESTNUT HILL FARM

200 Wick Building, Youngstown, Ohio

We are offering some very fine sons of Imp. Galaxy's Sequel, out of great producing dams. Also, a few Heifers and Young Cows.

Est. MYRON C. WICK, Prop.

CHAS. H. DRISSEN, Supt.

Ledyard Bay Guernseys

Young Bulls and Bull Calves for sale from cows with big records and sired by Old Faithful 14947 and Ledyard Bay 2d 19299.

Old Faithful is a large bull with good back and wel sprung ribs, giving him great feeding and dairy capacity. In breeding he is backed by the cream of the Helendale Herd.

Ledyard is full brother to Azucena's Pride 2d, holder of the following records:

12633.30 lbs. milk; 706.46 lbs. fat as a 2½ year old.
16203.90 lbs. milk; 855.70 lbs. fat as a 4 year old.
Champion Record for the class.

It is a notable fact that the sire and dam of Ledyard Bay 2d are direct descendants from such noted animals as Lord Stranford, Sheet Anchor, Rutila's Daughter, Lucretia, &c.

Ledyard Bay 11074, the sire of Ledyard Bay 2d, has now eight daughters in the Advanced Register that average 520 lbs. fat, all but two with first calf. I have ten more. We wonder what they will do when tested.

Write for my Sales List and Folder.

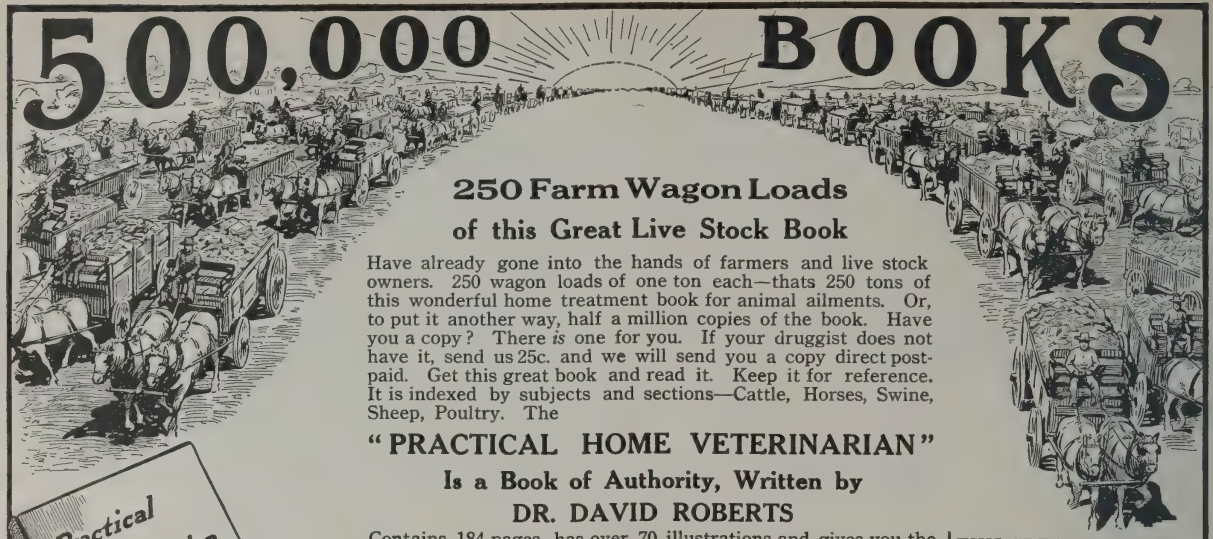
Fills Your Silo Quickly

With Less Power and Labor

You can operate this machine with a 4 h. p. gasoline engine. It's the lightest running blower type of ensilage cutter made—The *throwing, blowing, lifting force* carries the ensilage in a steady full stream rapidly up into the highest silo without waste of power. The ensilage packs perfectly and keeps sweet and succulent. The

Papec Ensilage Cutter

is easy to set up and take down. Simple in construction, not easy to get out of order. The entire frame is one solid piece of semi-steel. The bearings are always in line, run smoothly and will not heat. The feeding mechanism is geared to the main shaft—always gives you the desired length of cut. THE PAPEC ENSILAGE CUTTER is not chain driven but has heavy gears which transmit all the power. It cuts ensilage perfectly and swiftly—as fast as you can bring the corn to the machine.



Write for Illustrated Catalog. Send today for this book. It shows how The "Wonderful Papec" cuts ensilage with less power, time and labor.

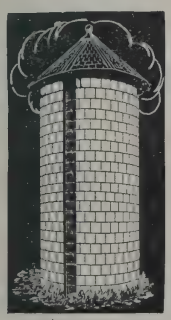
Protect Your Herd by Installing Cork Brick Floors

BARN OF MR. CHOPIN R. BRACKETT,
LONG LAKE, MINN.

Cork Brick have demonstrated conclusively after more than three years' use that they are from every standpoint, an ideal floor for cow stalls, calf and bull pens, piggeries, etc. Letters just as strong as Mr. Bigelow's have come from scores of stock owners. For the sake of your herd, you should not put off investigating Cork Brick any longer. A postal card brings full information.

Mr. GEO. S. BIGELOW
Breedsville, Mich., says in an unsolicited letter dated Aug. 26, 1913.

"Confirming my telephone talk with you this morning, I desire to have you send me 600 Cork Brick to Breedsville, Mich. I believe it was in June, 1911, that I gave you my first order. In two years' wear I have never had a brick come loose or **never had one break** and cannot see that there is any perceptible wear on them. They are very **warm** in winter, and I find that I do not require **one-half the bedding** that I would on cement or brick floors, and **I have had no udder trouble** whatever from any of my cows that some breeders have had, where the surface upon which they lie is too cold. From this long use and heavy test, as my cows weigh from twelve to fourteen hundred pounds, **I cannot say too much** for the use of Cork Brick in a cow stall."



WHY NOT SEND FOR FREE SAMPLE AND BOOKLET.

ARMSTRONG CORK & INSULATION COMPANY, 119 24th Street, Pittsburgh, Pa

Guernseys Deserve Good Ensilage

To keep ensilage fresh, sweet and succulent from the time the silo is filled until the last forkful is fed, you need to protect it from heat, cold and moisture. The

NATCO IMPERISHABLE SILO

is built of vitrified clay hollow blocks which contain two dead air spaces. The non-porous quality of these blocks and their glazed sides exclude all air and moisture. They make a silo wall that is

Weatherproof, Decayproof, Fireproof, Verminproof

The "Natco never needs painting—no hoops to tighten—no continual repair bills. It lasts for generations and keeps ensilage in perfect condition *always*. Attractive in appearance—an asset to your permanent farm buildings. *Any mason can erect it.*

Write today for illustrated book No. V. describing the construction of this better silo—mailed free.

Donald of Ellenwood 16329

One of our herd bulls, is certainly a splendid individual. His pedigree shows such individuals as Glenwood's Main Stay 6067, Mainstay 3789, Glenwood Girl 6th 9113, Sheet Anchor 2934, Manager 3393, and other famous A. R. blood. He resembles very much Old Sheet Anchor. Our other herd bull, Glenwood's Main Stay 24th 12664, who is sire to Donald, has proven himself a worthy sire.

About half of our cows have been admitted to the Advanced Registry with creditable records. Their blood traces back to such ancestors as Divan 5846, Pat of Haddon 3919, Sheet Anchor's Rutila 9170, Glenwood Boy of Haddon 4605, Glenwood's Champion 15639.

Write for price list and descriptive breeding of young bulls from A. R. cows. We are also breeders of select Berkshires. Visitors are welcome.

These Seven Cows

May All Be Kept For One Year On

the product of one acre of land. It's hardly believable. And keeping seven cows for a whole year on one acre goes a long way towards reducing the cost of milk. Eureka Corn produced in one year, on one acre, 70 tons and 800 pounds. Figuring at the rate of 50 pounds of ensilage per day, which is a very liberal allowance, this amount will feed seven cows for one year, with enough left over for 261 feeds. This enormous crop won our $50.00 gold prize for the heaviest yield. We believe this record cannot be broken by any other corn, but we believe Eureka will beat its own record this coming year.

We offer $100.00 in Gold to the First Party Breaking our Present Record in 1914

We believe our crop of Eureka Corn for 1914 planting will germinate better than 98%. Eureka Corn was introduced by us about 25 years ago. It is a white smooth dent corn, grows the tallest, usually from 16 to 20 feet, has the most leaves and is short jointed. If planted thin, it will yield two and three ears to the stalk. Planting Eureka Corn is as good as an insurance policy to any farmer. It grows where other kinds fail and the yield is tremendous. Last season Eureka Corn was planted in 45 states, and the returns were exceedingly gratifying.

EUREKA CORN

Grows Tallest—Has Most Leaves—Greatest Number of Ears

You do not need to plant your whole farm when you can fill a 200-ton silo from 4 or 6 acres with Eureka. We're selling Eureka at last year's prices. Good seed is going to be very scarce and much higher before the planting season is over. Ask yourself what corn is worth per bushel that will produce 70 tons and 800 pounds. We are not asking you to experiment, we are only asking you to buy seed corn that has been proven by thousands of successful farmers to be the best that money can buy.

Read What Some of Our Customers Say:

Southampton, Mass.
Ross Bros. Co., Worcester, Mass.
Gentlemen:—I received the two bushels of Eureka Corn you sent me and was very much pleased with it. I would have not filled my silo this fall without it, for the season was so dry, and it grew on land where other corn would have been a failure this year.
Yours truly,
PAUL WIESEL.

Norwich, Conn., Oct. 26, 1913.
Ross Bros. Co., Worcester, Mass.
Gentlemen:—I would only be too glad to answer all letters that come regarding your corn. The corn averaged about 18 to 20 ft. in height. I picked out two stalks that measured 22 ft. from the ground to the tip of the blossom; one stalk was 3 in. in diameter.
Yours truly,
CLARENCE SHOLES.

Belgrade, Me., Dec. 1, 1913.
Ross Bros. Co., Worcester, Mass.
Gentlemen:—The Eureka Corn that I bought of you last Spring grew well; raised enough from the one bushel planted to fill my silo, 9 x 20. Corn was planted the fifth of June, and we had a very dry summer, but it made a heavy growth.
Yours truly,
A. L. COTTLE.

We refer you to any of these well-known planters: F. M. Kingsley, Lebanon, Conn.; Spring Glen Farm, New Haven, Conn.; Maple View Farm, Southington, Conn.; Strafford Co. Farm, Dover, N. H.; Columbia Stock Farm, E. Barnet, Vt.; Chas. M. Lunt, W. Farmington, Me.; Guy F. Huntley, Marlow, N. H.; Richard T. Eastman, Littleton, N. H., Edw. L. Welcome, W. Chesterfield, N. H.; E. D. Driver, W. Charlestown, Vt.; Wm. Cameron, W. Glover, Vt.; Fred J. Ackerman, Chelsea, Vt.

Sheffield World's Prize Flint Corn

still holds the record for the heaviest yield of flint corn, 123.8 bushels of crib dry corn from one acre. If you grow corn for grain, plant Sheffield. No other flint corn equals it. It can be planted later and will mature earlier than any other kind. It will produce more good ears, well filled out, than any other variety. Look out for your stock of flint corn before it is too late. There is a lot of poor corn on the market. Our stock of Sheffield has been tested and will germinate nearly 100%.

SEED OATS

It pays to buy the best, whether you wish to cut for green feed, for fodder, or ripen for grain. Anyone of the several kinds we offer will produce enough more feed to many times over pay for any difference in price. This has been proved by actual test and we are confident that in the stover alone you will get enough more feed to more than pay the difference in the price of the seed. You also get heavier and plumper heads filled with grain that will produce milk at a lower cost than almost any kind of green feed. All we ask is a trial.

Molassine Meal

MADE IN ENGLAND

Testimony Like This Counts

STATE OF CONNECTICUT

Board of Agriculture.

Capitol, Hartford, June 28, 1913.

My Dear Sir:

Have used Molassine Meal as a part ration on two of the cows in our herd. Am well satisfied with the result, both as a producer and as an appetizer.

Shall use it permanently as a feed in our rations for our winter dairy.

Very respectfully,
(Signed) L. H. HEALEY.

Molassine Meal has been fed for 20 years because it is

UNIQUE DISTINCTIVE SUPERIOR

Nothing Will Take Its Place

With it you can force your cows, whether for records of butter fat or milk production, and it is the testimony of feeders of unquestioned standing that **without Molassine Meal they believe it would have been impossible to obtain the results they have.**

It enables every organ to do its **best work**; it keeps the digestive tract free and clear of worms or harmful bacteria; it assists digestion and **allows the cow to get full value from her food.**

Feed ¼ Molassine Meal, ¾ regular ration to get results.

Look for this Trade Mark on every bag

"MOLASSINE MEAL" is put up in 100 lb. bags. Ask your Dealer for it or write direct.

Have you had our latest Feeders Book? If not, write us for it; FREE.

April 1914

New Quick-Action Method of Erecting Barn Equipment

We have just completed a plan that reduces the whole proposition of barn equipment erection to absolute simplicity. It enables any man to begin at once the work of building or remodeling his barn.

This new method is applied to the JAMES standards with which readers of the Guernsey Breeders' Journal are familiar.

We simply make JAMES Sanitary Barn Equipment better than ever by providing a new and easy way of erecting.

When ready to begin, all you need to do is to get the required number of JAMES anchors. You can get these immediately.

Set these plates—which are to hold the stall posts—in your cement curb and go right on finishing up the floor. Please study the pictures for clear proof of why you can start work tomorrow on

JAMES Sanitary Barn Equipment

No. 1. Cement Worker placing JAMES anchors in soft cement of curb. After anchors are in, work of cementing barn floors proceeds without delay. Meanwhile, your JAMES equipment is on its way to you.

No. 2. Placing stall posts on bolts inserted in another plate

No. 3. Attaching our new square horizontal pipe to upright posts. All fittings are in their proper places on equipment.

No. 4. Attaching stall partition—one end being bolted to upright, the other embedded in the barn floor.

No. 5. Attaching stanchion alignment device to fittings.

No. 6. Placing Sure-stop Swinging Post on Flanges of upright fittings. These flanges have strong pins or buttons on which the sure-stop is hung.

No. 7. Connecting rod which moves all the sure-stops at one time.

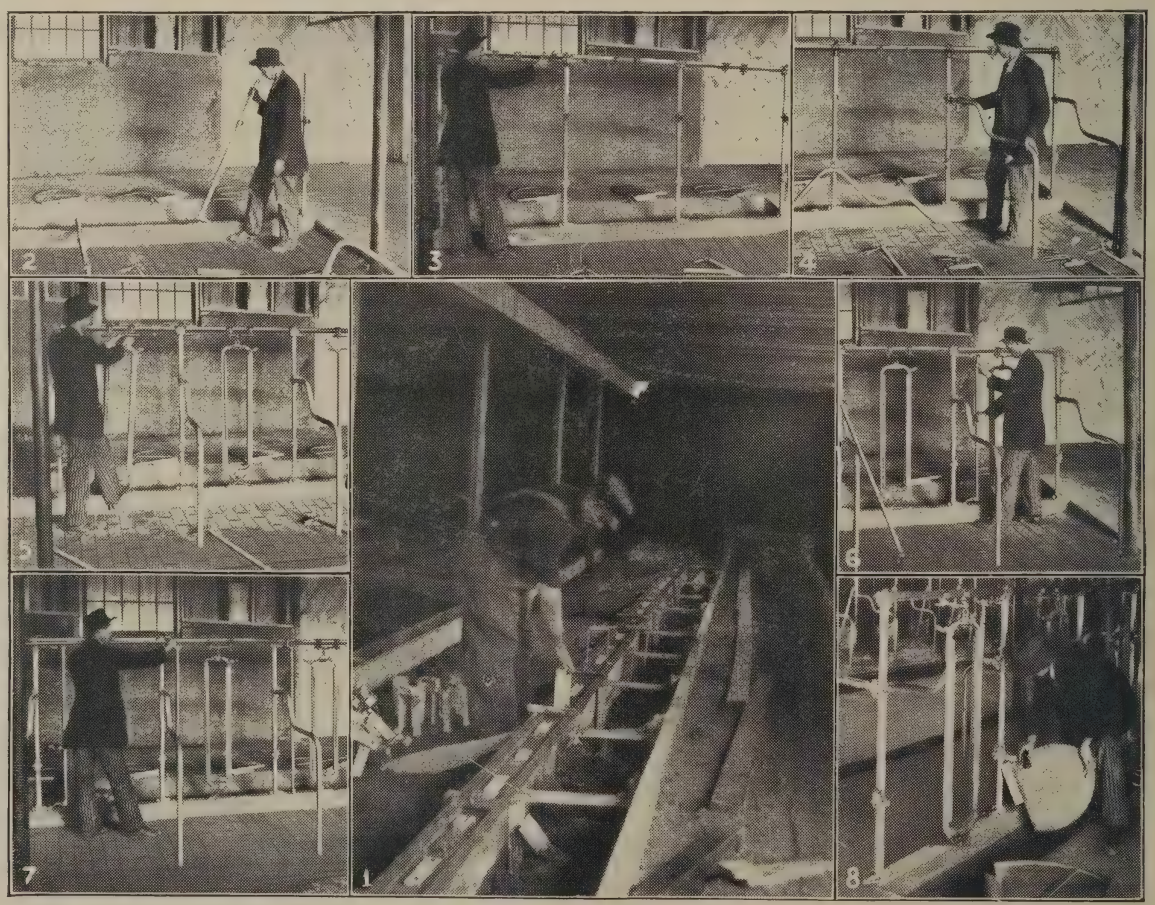
No. 8. Attaching manger division to fitting already in place on upright post.

These pictures show the erection of the JAMES 14C Stall. Stall 14A is erected in exactly the same way, excepting that our 14A stall has the complete manger.

Other New Features

Horizontal pipes are now square—or quadrangular—instead of round. This means that the fittings are so firmly held that they cannot twist on the pipes.

Bull pens, cow pens and calf pens are just as easy to erect as the stalls.



Another big improvement is the baking of all paint on the equipment.

Assembled Stall—Knocked down for Easy Handling.

JAMES Equipment will reach you in five assembled groups—all nested and bundled. No boxes fitted with small parts—no complicated directions.

You can't go wrong in erecting JAMES Equipment. One man can do all the work. Write today for complete particulars.

Selma of Pinehurst 14521 and Her Twin Daughters

Owned by Mrs. E. W. Strawbridge

Frank S. Peer

IMPORTER OF

GUERNSEY CATTLE

is due to arrive at the U. S. Quarantine Station, Athenia, N. J., April 6th, with his

44th Importation, Consisting of about 120 Head

This includes the splendid sire **Osseo 4th** of "May Rose" breeding on the sire's side and out of a Champion daughter of "Masher's Sequel." The noted show bull **Flora's Sequel 2d of the Vimera,** a son of the Champion cow "Flora of the Vimera," together with a number of daughters of both these bulls; also

2 Yearling Bulls, 20 Cows, 60 Bred Heifers 40 Yearling Heifers

This stock was personally selected by Mr. Peer and is of the usual high quality of his importations.

We shall be pleased to write interested parties about this stock and to have them inspect it when it arrives home, Osceola Farms, Cranford, New Jersey, on and after May 11th. Address prior to May 11th, Care U. S. Quarantine Station, Athenia, New Jersey

(Cranford is 17 miles from New York City on the Main line of the Central R. R. of New Jersey, with a train every 20 minutes; and four miles from Rahway on the Main line of the Pennsylvania R. R.)

SARNIA

I am offering for sale a particularly choice lot of imported heifers, some of them in calf. By such sires as Princess's Jewel, Raymond's Pearl King, Gov. of the Chene, Justinee's Sequel of the Preel, and others equally as well known.

Also, some imported and home bred cows with Advanced Registry records, and some high class young bulls nearly all from Advanced Registry Cows. Personal inspection invited

Breeders of Guernsey Cattle

We have bull calves for sale from

Imp. Golden Secret 12599

a direct descendant from old May Rose through MAY ROSE 2d and ROSE OF GOLD, two of the most celebrated first prize winners of the breed. The progeny of Golden Secret make the best known cross with King of the May stock. Also, calves sired by

John Q. of Edgewater 20967

on his sire's side, a direct descendant of GOVERNOR OF THE CHENE through GOLDEN HERO OF L'ETIENNERIE and IMP. HOLDEN 4th, both distinguished prize winners and sires of advanced registry stock. Two daughters of Holden 4th were recently sold at auction, one for $2500, and one for $1700. The dam of John Q., IMP. CHARMANTE 6th, is a cow of beautiful show ring type, and a very large producer, record **15149.8 pounds milk, 720.2 pounds fat.** Also bull calf by

Yeoman's King Victor 22295

and one by IMOGENE'S PERFECTION 24967, two young bulls bred at the farm combining the strongest and best blood lines of the breed.

Will also sell two more Heifers of splendid individuality, now in milk or about due to calve

What Wm. Galloway Thinks of

CORK BRICK

Mr. Wm. Galloway's Barn, Waterloo, Iowa.
Stalls paved with 7500 Cork Brick

Every stock owner should write for our 32 page illustrated book describing Cork Brick. It's free. Sample too if you want it.

One of the finest dairy barns in the country is that of Mr. Wm. Galloway, the well known manufacturer, of Waterloo, Iowa. Almost two years ago, he had all his stalls paved with Cork Brick. The following letter shows how well satisfied he is with the results:

"I am glad to report that I am having very fine success with the Cork Brick. They make a very warm floor for the cattle to stand on. They are resilient, sanitary and durable, and best of all the cattle do not slip around on this floor the way they would on cement and other floors.

"In fact, I think the Cork Brick are just the ideal thing for a floor in a stable or barn of any kind in which you put either cattle, horses or any other live stock that have to stand in the same place. I would not think of building a barn without using Cork Brick, and can cheerfully recommend it to any one wishing to have ideal flooring for a barn of any kind."

MAY WE SEND YOU FURTHER INFORMATION

ARMSTRONG CORK & INSULATION COMPANY, 119 24th Street, Pittsburgh, Pa

HELENDALE FARMS

Athens - Wisconsin - Portage

Office, 700 Cedar Street, Milwaukee

Give us the Guernsey Cow for profitable dairying and there are none handsomer.

For building up a dairy herd from common stock, there is none to compare with the Guernsey sire.

The new list of young bulls, 8 months to 2 years old of the famous Yeksa and Materna families, recently issued by Helendale Farms, has met with so much approval, and is so nearly disposed of, that a supplementary list has been added, this giving a few more opportunities to secure a well bred sire at reasonable prices.

They are tuberculin tested and guaranteed. They will be disposed of in the order in which acceptances are received.

List on application to above address.

BULLS FOR SALE

Marva's Rose King 22797

Born August 5, 1912

SIRE—Deanie's Rose King 17773

DAM—Triple Champion's Marva 30601. She is a daughter of Triple Champion, a grandson of both Imp. Island Champion and Masher's Sequel. The milk of eight daughters of Triple Champion, which have qualified for the Advanced Register, averaged with their first calves 7043.00 lbs. of milk and 374.44 lbs. and 5.46 per cent. of butter fat.

The record of Triple Champion's Marva for A. R. was 9234.80 lbs. of milk and 454.70 lbs. of butter fat. She is now under retest with 4231.80 lbs. of milk and 204.04 lbs. butter fat in 91 days.

Deanie's Rose King 17773

Whose dam was Bonny Deanie 17086, with a record of 15016 lbs. of milk and 656.09 lbs. butter fat. in re-test.

Money Moon 24200

Born Dec. 5, 1912

SIRE—Deanie's Rose King 17773.

DAM—Novice Masher 33365

Decended from such famous sires and dams as Glen Masher, Monarch of the Glen, Glenwood Girl 6th and La Belle France.

She has qualified for A. R. with 7813.60 lbs. of milk and 392.39 lbs. of butter fat, and 5.82 per cent. with her first calf.

OAK RIDGE GUERNSEYS

19 Cows in Advanced Registry

13 are American Bred (1 with first calf) and average 9,892 lbs. milk; 481.3 lbs. fat.

6 are Imported (2 with first calf) and average 8,863 lbs. milk; 465.8 lbs. fat.

The 19 average 9567.3 lbs. milk; 476.2 lbs. fat, equal to 556.2 lbs. butter.

These records were all made by us within the last three years, and by cows that are today working in our herd.

NEXT MONTH COMES CORN PLANTING

In anticipation of doubling the feeding value of the 1914 crop, and receiving for your labor all that you are entitled to, order a UNADILLA SILO forthwith. It will perform wonders with corn. Nutritious, succulent silage in the ration, both winter and summer, enables one to dispense with the expense of half the hay and mill feed. This saving, plus the value of the increased milk yield, will equal the cost of a UNADILLA the first year. Do you know of a surer way, excepting the raising of pure-bred Guernseys, to make your money return a

100 PER CENT. DIVIDEND

Write for catalogue illustrating the time-tried and practical features that have given the UNADILLA a national reputation for being the best built and most convenient Silo in use. We are sales agents for the celebrated

PAPEC PNEUMATIC ENSILAGE CUTTER

OFFERING OF IMPORTED GUERNSEYS

My recent importation consisted in large part of heifers not bred. A selection of twenty-five can now be offered that are safely in calf to the undermentioned

MAY ROSE BULLS

and the resulting progeny should prove highly desirable since heifers and service bulls alike, are of the most popular breeding

Imp. Itchen May King 25174

SIRE—Imp. Itchen Red Raider 27342, by Imp. Moss Raider 22155 out of a full sister to Imp. May Rose King.

DAM—Itchen Verbena 5501 E. G. H. B. by May Day 1132 E. G. H. B., who sired the renowned Itchen Daisy III 15630.

This young bull is a superb individual—a worthy son of a famous sire and his extended pedigree shows five crosses of May Rose blood, through the best channels.

Don Bernardo of Linda Vista 20617

SIRE—Jethro's May King of Linda Vista 14591, own brother to Rose of Langwater 24204 (King of the May-Hayes Rosie) who holds third place in Class F with record of 12966.50 lbs. milk—669.89 lbs. fat and third place in Class D with record of 15008.20 lbs. milk—751.62 lbs. fat.

DAM—Rutila's May Rose 24946 who holds fifth place in Class E with record of 11415.75 lbs. milk—655.93 lbs. fat by Imp. May Rose King 8336.

This cow with her dam and grandam were the three best cows bearing this relationship, that I have ever known.

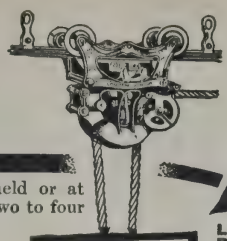
WOODEND FARM'S

SPECIAL OFFERING FOR APRIL

Two Fine Sons of Imported Cora's Governor of Chilmark

old enough for service. Both are out of A. R. cows.

Cora's Governor now has 25 daughters that have finished their year's work in the A. R. He has never had a daughter started who did not qualify with a good margin. His only junior 2-year-old to finish with less than 300 lbs. fat, made 282.20 lbs. The same heifer re-entered at 4 1-2 years made 517.79 lbs. He has 3 junior 2-year-olds with 509.50 to 529.06 lbs. fat.



The first bull offered is FIRST DAWN'S GOVERNOR, full brother to Dawn of Woodend 509.50 lbs. fat as a jr. 2-year-old. Dam First Dawn A. R. record 392.27 lbs. fat one of the 4 A. R. daughters of Primeval. First Fawn's dam is Sunbeam's Dawn A. R. record 379.76 lbs. and has 3 A. R. daughters. Sunbeam's Dawn is closely related to Yeksa Sunbeam, the first cow in the world to make an official record of 1000 lbs. butter in a year.

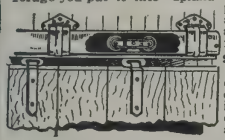
The second bull is out of Morton's Lily of Locust Hill, A. R. record 476 lbs. fat, one of two A. R. daughters of Fairview Duke. This cows breeding on both sides is from the herd of John C. Higgins, the breeding that has done such phenomenal work in the Anna Dean herd.

We have younger bulls by Cora's Governor and several by Maxwell Valentine, and Emerita 2nd's Son. Send for the list and if possible come and see them. We will meet you if you notify us. If you are interested in any particular bull and will ask us, we will send you picture and pedigree of him.

B. BIERI, Supt. Woodend Farm, Mound, Minn.

You Save the Labor of Several Men With LOUDEN Hay Tools

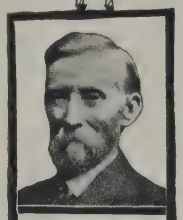
Every minute is made to count, in the hay field or at the barn; you save time and labor cost of from two to four men every day, with



Louden Junior Hay Carrier and Balance Grapple Fork

They are dependable. Will go right along through a day, a week or a month, year after year, without loss of time on account of disorder or breakage.

Will Stack or Store More Hay in a Given Time Than Any Other Fork or Carrier



Louden Junior Hay Carrier is absolutely correct in principle and action—the simplest, most powerful and smoothest working hay carrier made. Built of malleable iron, with extra strong frame, which cannot spread or bind on track. Swivel clamp prevents loss of time from twisted or kinking ropes.

Louden Balance Grapple Fork handles any kind of hay, fodder or forage you put it into—upland hay, dry short clover or alfalfa, cow peas or threshed straw. Will pick up half a ton at once and bind it together so that none can get away. Built of the finest steel made especially for us; designed according to our own patent.

Sling Carriers. The Louden Company was the first to recognize the value of slings and sling carriers, and originated most of the successful ideas in use. Where a large amount of hay is to be moved, slings are big time savers.

Louden Bird-Proof Barndoor Hanger does away with the sparrow's happy home and makes you forget about ice, snow, trash and other barn door troubles. Always on the track; easy to move. The only self-adjusting double flexible hanger; can't be broken by crowding stock. Tubular steel track never sags with the heaviest doors.

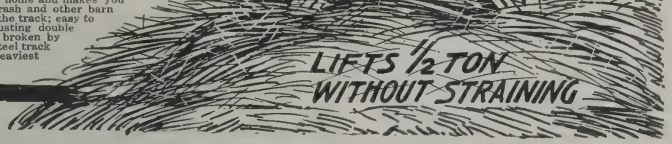
Wm. Louden
Originator of Modern Barn Equipment

Louden Power Holst is a great labor and money saver wherever hoisting power is needed. Does away with team on the draft rope and a man to drive it. One man operates it from the load. May be used with any carrier. It handles the biggest load of hay in five minutes. Saves you $5 a day or more. Operates with gasoline, electric or steam power. Nothing complicated about it. A few minutes practice enables a man to operate it.

Louden Hay Tools Have Been on the Market Since 1867

They are covered by numerous patents for up-to-date improvements, making them superior to all others in design, construction and operation.

Louden Standardized Barn Equipments are the Original and the Modern, all savers of labor, time and money on the farm. They include:



- **Louden Sanitary Steel Stalls and Stanchions.**
- **Louden Feed and Litter Carriers.**
- **Louden Bird Proof Barn Door Hangers.**
- **Louden Hay Tools.**
- **Louden Standardized Spring-Balance Mangers.**
- **Louden Alignment and Go-Right Devices.**
- **Louden Bull Pens, Calf Pens, Maternity Pens, etc.**

Books and circulars on any of this equipment, and giving valuable information, sent FREE. Write Today.

See the Louden Line at your dealer's.

Free Barn Plans: If you are about to build or remodel your barn let our Architectural Department help you. It will save you labor and money. The service is FREE.

Proprietors

Langwater Guernseys Are Producers

LANGWATER Dorothy 27944, has established a **precedent** for the cows of the Guernsey breed by making a record of 16099.7 lbs. milk and 781.51 lbs. fat as a three and one-half year old and **carrying** her **calf** seven months while doing so.

This is not only the highest record of the breed for a cow carrying her calf this length of time while on test, but it places Langwater Dorothy seventh among the Advanced Register cows of the breed as a milk producer. Langwater Dorothy is a daughter of King of the May and stands first in milk production and second in butter fat among his daughters.

Langwater Dorothy 27944

2 year old record: 13022.7 lbs. milk; 649.78 lbs. fat.

The Annual Meeting of the American Guernsey Cattle Club

Will be held at Hotel Imperial, Broadway and 32d Street, New York City, Wednesday, May 13, 1914.

Executive Session 10.30 a. m.

Guernsey Breeders' Luncheon following.

Guernsey Breeders' Conference.

Tuesday evening, May 12, at 8 p. m., there will be a general Guernsey breeders' conference at which time some person of distinction will make an address, and a general discussion of matters of importance to the breeders will be had.

Some Creditable A. R. Work

Elsewhere in this issue will be found details of the record of Jehanna Chene which entitles her to go to the head of Class E. This fine record gives her a credit for 365 days of 16186.70 lbs. milk and 863.36 lbs. butter fat.

A great deal has been said about the ability of the Guernsey to produce large amounts of butter fat. It was interesting to note how closely the records of eleven Guernsey cows exceeding 800 lbs. of butter fat run with the records of twenty-four Holsteins exceeding that amount as published in the recent issue of the Holstein Blue Book.

These show the average for the Guernseys to be 884.72 lbs. butter fat, while the average for the Holsteins is 884.57 lbs., a difference of only .15 of a pound.

May Rilma.

A great deal of interest has been shown in the work of May Rilma. Up to the first of March, with the records completely checked, she was shown to produce 947.65 lbs. butter fat and 17766.90 lbs. milk in 327 days. At the present writing, the 15th of March, she has 740.40 lbs. milk additional to her credit. The regular test for March shows 100.1 lbs. milk—6.007%—6.013 lbs. butter fat. The Massachusetts check test showed 98.2 lbs. milk, 6.01%—5.9046 lbs. butter fat. Using the average of these two percentages with the amount of milk already to her credit will give her 992.16 lbs. butter fat, her milk being 18507.30 lbs. This places her at the head of all Guernseys in the production of butter fat and within 301.20 lbs. of the highest milk record.

It is expected that the cow will produce in her year 1060 or more pounds of butter fat and close to 20,000 pounds of milk.

Valuable Reference Data

Complete A. R. Index.

In the last issue, we published the index of the bulls and cows which comprise Volume 28 of the Herd Register, and which have appeared in the monthly Journal from July to March. This is followed this month with a complete list of A. R. animals in the entire twenty eight volumes.

Great Sires and Producing Dams.

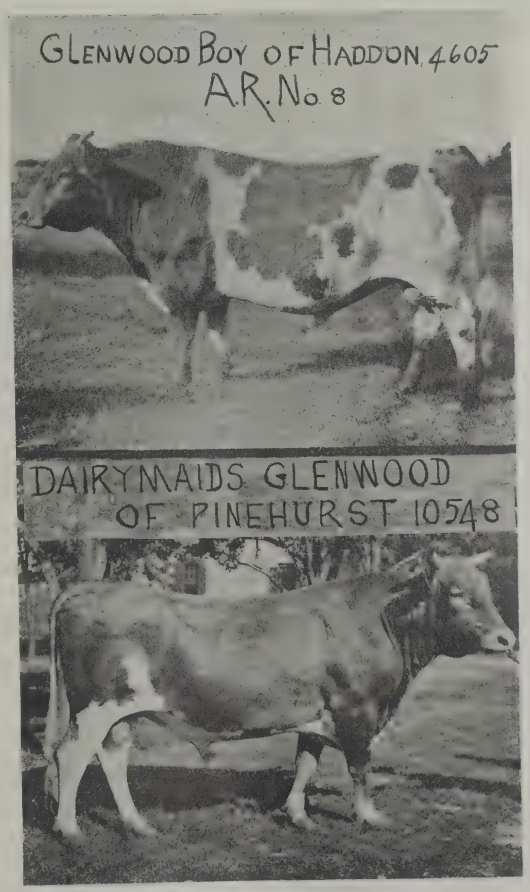
In addition to the index above referred to there will be found in the May issue a new and revised list of A. R. Sires and Producing Dams. This list, as published a year ago, has proven a great help to the breeders and it is hoped by re-publishing and bringing the data up to date, it will again prove of equal value.

General Index.

There is now on the press a general index of the 28 volumes of Herd Register as published. This should be very valuable for reference in finding data of animals and also in selecting names. It will also be useful from the fact that the change to the new style and form of Herd Register has made really two classes or sizes of Volumes and this general index will be the new size and style and, therefore, in referring back, one can, by consulting it readily turn to the old style Volume in which the record will be found.

Coming Guernsey Meeting.

At the special meeting of the Executive Committee of the Western Guernsey Breeders' Association held in Madison, the directors decided to hold two summer meetings in Wisconsin during May and June. These conferences will be held at West Salem, La Crosse County, and Elkhorn, Walworth County. Joint picnics of two county associations will be held at each place. It is expected that W. H. Caldwell of Peterborough, New Hampshire, will attend these meetings. Plans were adopted at the meeting which will make it easier for county associations to get helpful outside speakers for their meetings.



The Home of The Selma's and The Jedetta's

Pinehurst Farms, Moorestown, N. J.

owned by

Mrs. E. W. Strawbridge

PINEHURST Farm, the home of two of the greatest families of the Guernsey breed, consists of one hundred and sixty acres of slightly rolling land just at the edge of Moorestown, New Jersey, a suburban city about a forty minutes ride from Philadelphia, Pennsylvania. The beautiful summer home of the owner, Mrs. E. W. Strawbridge, lies at the front of the farm and about a five minutes walk brings one to the farm buildings proper. They are constructed of wood, painted red, with white trimmings, and consist of the main barn, with two stables extending in a westerly direction from each end. Five smaller sheds which serve as bull and calf pens, two silos, a machine shed and a corn crib complete the quota of buildings. The main barn houses the horses grain and hay, while in the south stable there are three box stalls for test cows and stanchions to accommodate thirty more animals. In the north wing is built the dairy and several box stalls for calves are also located there. Around the barnyard of which the main barn forms the west wall are located the other barns for bulls and young stock, and also the two one hundred ton silos. All the roughage for the herd is produced on the place, corn and alfalfa being the main crops raised, while some cow pea hay and oats are grown for green feed to supplement pasture in the late summer and early fall. The product from the thirty milch cows is retailed to a fancy Philadelphia trade.

The land was purchased eighteen years ago and breeding operations were started a little later with cows from the herds of Levi P. Morton, Rhinecliff, New York, and Joseph Evans.

The purchases that have aided most in the development of the herd, however, were made on December 5, 1896, when the great Glenwood Boy of Haddon 4605 who now has twenty-six advanced register daughters and nine advanced register sons was purchased from E. T. Gill, of Haddonfield, New Jersey, and on April 2, 1903, when Dairymaid of Elm Place 14197 A. R. 19, with 473.47 and 668.36 pounds of butter fat to her credit, was purchased from G. B. Tallman, of Fayetteville, New York. Through the wonderful records of Dairy Maid of Elm Place, made before feeding for advanced register work had become a science and before the days of silage, and through the performance of her daughter Dairymaid of Pinehurst, the Pinehurst farms have become known far and wide. Old Dairymaid has been the most regular breeder ever owned on the farm, having produced a calf every year until last year, when at the age of fifteen years, she calved prematurely while at pasture and blood poison having set in quite severely, she had to be killed. She lives again, however, in many worthy sons, daughters, grandsons and granddaughters scattered throughout the United States. Bred to Glenwood Boy of Haddon 4605, she produced four bulls and one hiefer. Three of the bulls having gone to head the herds of Miss Mary Vaux at Bryn Mawr, Pennsylvania, M. L. Welles, of Rosendale, Wisconsin, and Mr. Rieber, of Butler, Pennsylvania, where they are getting some fine young stock. The other son was Dairymaid's Glenwood of Pinehurst 10548, who, after having passed to George W. Ott, of Doylestown, Pennsylvania, George J. Miller, of Three Tuns, Pennsylvania and W. W. Marsh of Waterloo, Iowa, was repurchased by Mrs. Strawbridge on November 4, 1910, and has been used in her herd ever since, having sired the following advanced register cows, Marguerite of Pinehurst 24658 A. R. 1296, Haddon's Jewel 2nd 28928 A. R. 1359 with a record of 8242.60 pounds of milk and 345.92 lbs. of butter fat, and Lilian Glenwood 27438, A. R. 1534 with a record of 10517.60 pounds of milk and 563.49 pounds of butter fat. He has sired also a large number of very promising heifers not yet in milk. The heifer was Dairymaid of Pinehurst 24656 A. R. 843, mentioned above, who made a record of 7913.50 pounds of milk and 405.51 pounds of butter fat at one year and ten months of age, and later in the hands of W. W. Marsh, made 14,562.4 pounds of milk and 860.26 pounds of butter fat at three years of age and at four years and eight months made 17,285.3 pounds of milk and 910.67 pounds of butter fat. Old Dairymaid, bred to Stranford's Glenwood of Pinehurst 13609, a son of Glenwood Boy of Haddon 4605, produced a bull and a heifer. The bull is now in the herd at Maple Farms, Midlothian, Illinois, and the heifer, Lady Dairymaid of Pinehurst 29723, A. R. 2106, went to Mr. Marsh, and there has recently made a record. of 9669.80 pounds of milk and 523.83 pounds of butter fat with her first calf.

From the bull Glenwood Boy of Haddon 4605 have been developed primarily the two great families of Jedettas and Selmas. Jedetta 11966 A. R. 227 was born February 25, 1899, on the farm of Levi P. Morton, mentioned above and purchased by Mr. Strawbridge at eight months of age. She was sired by Annatto 3887, and out of Derita 7668, and is the only

Owner Mrs. E. W. Strawbridge, Moorestown, N. J.

offspring of either of these animals that has ever been heard from in a large way.

Jedetta's first two calves were born dead, and the first living calf was produced December 20, 1903, in the animal Jedetta of Pinehurst 17434 A. R. 502, sired by Glenwood Boy of Haddon 4605. She is a handsome cow with beautiful balanced udder, and has made two advanced register records, one at two years and two months of age of 9,256.9 pounds of milk and 424.02 pounds of butter fat, and the other at five years and five months of 15,109.10 pounds of milk and 778.80 pounds of butter fat, and is the dam of four females and three males among whom is Jedetta of Pinehurst 2d 25704 A. R. 2151, who made a recordof 9,257.1 pounds of milk and 437.93 pounds of butter fat.

Jedetta's (11966) second calf was Jedetta 2d 19630 A. R. 623, born November 18, 1904. With the appearance of this calf, she was put in official test and made during her year 8601.30 pounds of milk and 451.07 pounds of fat, and carried a calf nine months. Jedetta 2d was sired also by Glenwood Boy of Haddon 4605, and has made the following records. At two years of age she made 7849.00 pounds of milk and 410.69 pounds of butter fat, and at three years and seven months was entered again and made 8949.40 pounds of milk and 482.-10 pounds of butter fat, and at seven years and ten months made 10417.40 lbs. milk and 483.16 lbs. butter fat. She is the dam of five progeny, three being females and two males.

Jedetta's third calf, Jedetta 3d 21496, A. R. 1298, born April 5, 1906, and sired by Glenwood Boy of Haddon 4605, made as a four year old 9798.70 pounds of milk and 431.19 pounds of butter fat, and is the dam of two female and two male progeny. She is under re-test, and making a larger record than she did during her first performance.

The fourth calf was Jedetta 4th 25918, A. R. 1070, born March 18, 1907, sired by Glenwood Boy of Haddon 4605, who made a record, calving prematurely at two years and one month of age, of 5814.10 pounds of milk and 29.29 pounds of fat. She is the dam of Jedetta A of Pinehurst 29720, A. R. 2080, who with her first calf made 7988.10 pounds of milk and 349.81 pounds of butter fat, and with her second calf is milking around forty-six pounds daily.

The Selma family has proven even greater than the Jedetta, the old cow, Selma of Pinehurst 14521, A. R. 325, having produced not only several notable offspring but also an official record of 41,608.90 pounds of milk and 2,567.56 pounds of butter fat in four consecutive tests. She was born November

A Little Data.

One of the positions that has been held for several years unchallenged is that of the leader of Class E by Dairymaid of Pinehurst 24656. Her place has seemed quite secure with the nearest competitor 115 lbs. away.

This month Jehanna Chene 30889, a granddaughter of the famous Island bull Governor of the Chene R. G. A. S. 1297 P. S., steps up to the head of Class E with a record of 863 lbs. of butter fat. This fine young cow was sired by Imp. Governor I of the Chene 10563, who now has twelve daughters in the Advanced Register, and out of Pauline Spotswood 30446, A. R. 1924, with a record of 545.02 lbs. of butter fat in Class B.

Five hundred pound records that used to look so good are becoming more common, but when a heifer beginning her year's work at twenty-three months of age, as did Rowellan's Matron 37221, makes 9542.6 lbs. of milk and 522.7 lbs. butter fat, she deserves more than passing notice. This is 155 lbs. more than the average for her class, and we may expect to hear from her again.

A record of 533.69 lbs. butter fat comes in with the following statement that sounds almost like an apology for its size,—It is the lowest record of any of our mature cows." Peachwood 2d's stable mate, Imp. France XVIII's Daughter 25001, completing at the same time, has a record of 15,907 lbs. milk and 701 lbs. butter fat. While this does not bring her among the Class Leaders, she has in quantity of milk produced exceeded three of the five. Her persistency in milking is shown by the fact that she gave 34.9 lbs. on her first and 34.8 lbs. on her 365th day of her year. Still stronger evidence of her persistency is shown by the fact that having dropped her first calf on Nov. 25, 1910, her second, Nov. 16, 1911, and her third February 28, 1913, she has been milking continually for 1193 days with only 23 days rest. She has given in that time nearly eighteen times her weight or nearly twenty tons of milk and seven-eights of a ton in butter fat, besides giving birth to three calves. She has developed during her A. R. work from a heifer to a cow of great capacity and increased in weight to 1400 lbs. Such cows are good workers and an honor to any breed.

Last summer May Rilma 22761, who has given 947 lbs. butter fat in 327 days, touched a high figure with 103 lbs. of butter fat in thirty days. Golden Elsie 2d 33422, as a three and a half year old, now comes forward with 72 lbs. of milk in one day and nearly a ton of milk in thirty days. She gave slightly over 100 lbs. of butter fat also in 30 days.

That the capacity of the Guernsey is still ahead of us is very apparent.

English Guernseys in the Year 1913

A Review Taken from the Live Stock Journal Almanac

GUERNSEY breeders have had a successful year. The membership of the English Guernsey Cattle Society has considerably increased. Many new breeders have joined it, while new herds have been started in various parts of the country, several in Scotland. Capital entries have been made at the principal shows and the merits of the breed have been thoroughly maintained. As is well known there are a large number of enthusiastic breeders in the United States where the valuable qualities of the Guernsey are fully appreciated. Much is done to familiarize the public with the capabilities of the breed for milk production and otherwise. Mr. Robert F. Ling, Secretary of the English Guernsey Cattle Society, in reply to an inquiry, mentions that from January 1st to mid October the number of export certificates issued have been—America (U.S.A.) 13 bulls, 152 cows; Argentine Republic, one bull; Australia, one bull and three cows; total 170. This number will be increased, as at the time when the information was given there were several animals waiting for shipment that had not then received certificates.

The Society's milk records continue to grow in popularity, and 19 herds were represented in 1913 compared with 10 in 1912. The records are of individual awards both for milk and butter-fat, so that the dairy qualities of each animal are arrived at. In the 1912 test 51 cows and heifers were tested, these being from the herds of Sir H. F. Lennard, Mr. J. Pierpont Morgan, Mr. H. Fitzwalter Plumptre, Mr. F. Pratt Barlow, Canon S. R. Raffles-Flint, Mr. G. F. Ferrand, Mrs. J. E. Ellis, Mrs. R. C. Bainbridge, Col. E. A. Fitzroy, Mr. F. H. Norman, and others. The produce of milk ranged up to 10,737 lbs.; butter-fat percentage up to 6.35; butter-fat produced up to 462.1 lbs. The champion cow was Canon Raffles-Flint's Ladock Princess. Her milk produce was 10,737 lb.; percentage of butter-fat, 3.95; butter-fat produced, 418.7; weeks in milk, 41. Among the cows giving over 9,000 lbs. of milk were Ladock Pride, Saucy 2nd, and Goldstream 2nd. The best butter-fat records were those of Wickham Fancy 2nd, Goldstream 2nd, and Wickham May.

Not many herd sales were held during the year. At the sale of Lord Ashburnham's Herd 30 animals averaged £24 7s. 7d., two best prices having been 50 gs. for Ashburnham Amabel sold to Mr. H. F. Plumptre and 40 gs. for Ashburnham Maidenhair sold to H. R. H. the Duchess of Albany. At Mr. Pratt Barlow's sale 31 head averaged £28 12s. 2d. Lynchmere Citron Blossom,sold at 40 gs. to Mr. E. J. Wythes; Lynchmere Queen of the May 3rd. 52 gs., to Sir E. A. Hambro; Lynchmere Pretty Maid 4th, 71 gs., to Sir E. A. Hambro; Lynchmere Fay of the Mill, 54 gs., to Mr. H. F. Plumptre; and Lynchmere Citron Blossom 3rd, 41 gs., to Mr. Wythes.

As has already been indicated, excellent entries were secured at all the principal shows, the Bath and West, Royal Counties and Royal having been specially well supported and the class of animals exhibited has been very good. Special prizes were offered by the English Guernsey Cattle Society during the past show season at the exhibitions of Royal, Royal Counties, Bath and West, Devon Counties, Tunbridge Wells, and West Penwith Agricultural Societies.

At the Oxfordshire Show Mrs. W. H. Palmer won in the bull class with Hayes Fido 2nd, second being Mr. A. W. Bailey Hawkins for Loyal of Stagenhoe. Mrs. Palmer's Hayes Loyal was first in the cow class and Mr. Remnant's Wickham Hope 4th was second.

Guernseys made a really strong section at the Bath and West Show at Truro. For older bulls the winner was Mrs. Bainbridge's Raymond's Joe, Mr. Bailey Hawkins taking second with Merton Signet 5th, third Mr. Christopher's Trewwince New Boy. A fine class of two-year-old bulls was headed by Sir E. A. Hambro's Flora's Raymond, the same exhitor's Langley Gay Boy being second, and Viscount Valletort's Cotehele Lad came third. Mr. Oakey's Toby was the winning yearling, second being the Hon. J. Boscawen's Tregye Troy, and third Col. St. Aubyn's Golden Reveller. A good class of cows had the Rev. Canon S. R. Raffles-Flint's Ladock Princess first. Sir E. A. Hambro's Wena came second, and Mr. Bailey Hawkins' Winter Green 5th third. In three-year-old heifers Col. St. Aubyn's Golden Horn of Glynn 4th secured first from Mr. Blight's Governs Daisy. First in two-year-olds was Mr. Oakey's Sweet Briar, Mrs. R. C. Bainbridge's Elfordleigh Beautiful coming second, and Canon Raffles-Flint's Ladock Sweet Briar third. Lord Falmouth's Tregothnan Fairy Rose won in yearlings, with Sir E. A. Hambro's Hayes Bob 3rd and Hayes Rose 2nd second and third. Successful at the Devon County Show, held the week previous to the Bath and West, were Mr. G. F. Ferrand's Chieftain of Hawley, Mrs. Bainbridge's Raymond's Joe, Mr. G. Blight's yearling bull, Mr. W. Penrose's Trequean Arthur, Mr. G. F. Ferrand's Hawley Jessie, Mr. G. Blight's Governs Daisy, Mrs. Bainbridge's Elfordleigh Beautiful, and Mr. G. F. Ferrand's Morland Beryl. The English Guernsey Cattle Society's special went to Mr. Blight's Governs Daisy, with Mrs. Bainbridge's Elfordleigh Beautiful reserve.

A very large entry appeared at the Royal Counties Show at Windsor. For senior bulls Mr. H. Fitzwalter Plumptre's Fleur de Lys 5th took first, Mrs. Bainbridge's Raymond's Joe being second, and Mr. G. F. Ferrand's Chieftain of Hawkley third. In a strong class of two-year-old bulls Sir E. A. Hambro's Flora's Raymond won,second being Mr. J. I. Smail's Royal Squire of Warren Wood, and third Sir E. A. Hambro's Langley Gay Boy. The yearling bulls had for leader Mr. H. F. Plumptre's Golden Casket 3rd, Mr. J. C. Forster's Clatford Hero 3rd being second, and Mr. J. F. Remnant's Dene Boy third. The winning cow was Sir E. A. Hambro's Itchen Lady May, the same owner's Wena taking third, and Sir H. Lennard's Lady No. 91 second. The leader in three-year-olds was Col. E. St. Aubyn's Golden Horn 4th of Glynn, and Sir E. Hambro's Hayes Felois 7th came second, with Mr. J. C. Forster's Clatford Meadow Sweet 2nd third. The winning two-year-old was Sir H. Lennard's Lady No. 99 with Sir E. Hambro's Hayes Polly second, and Mr. F. Pratt Barlow's Violet of the Vrangue third. In the yearling heifer class first, second, and third were Sir E. A. Hambro's Hayes Bob 3rd, Hayes Rose 2nd, and Milton Cuchess of the Chene 7th.

The classes were good and well filled at the Royal Show at Bristol. For cows Canon Raffles-Flint won with Ladock Princess, second being Sir E. A. Hambro's Wena, and third Mr. Plumptre's Ashburnham Amabel. For those calved in 1909 or 1910 Mr. Remnant's Treacle 3rd took first, followed by Sir E. A. Hambro's Hayes Express 6th, and Canon Raffles-Flint's Ladock Beauty. In the two-year-old heifer class first was Sir E. A. Hambro's Hayes Polly, and his Milton Blue Bell 3rd came third, second being Mr. Pratt Barlow's Violet of the Vrangue. The latter exhibitor won in yearlings with Lynchmere Meadow Sweet 2nd, Sir E. A. Hambro's Hayes Rose 2nd, Hayes Bob 3rd, and Milton Duchess of the Chene 7th were second, third, and fourth. Older bulls were led by Sir E. A. Hambro's Flora's Raymond, Mrs. Bainbridge's Raymond's Joe taking second, and Mr. Ferrand's

Chieftain of Hawkley third. In yearling bulls first and second were Mr. Plumptre's Royal Sequel 2nd and Golden Casket 3rd, with Sir E. A. Hambro's Hayes Cherub 3rd third.

The first prize-winners at Tunbridge Wells were Sir E. A. Hambro's Wena, Hayes Express 6th and Hayes Rose 2nd, Mr. F. Pratt Barlow's Violet of the Vrangue and Roberts' Boy Sequel, and Mr. H. Fitzwalter Plumptre's Royal Sequel 2nd.

First at Tring were Sir E. A. Hambro's Wena and Mrs. R. C Bainbridge's Raymond's Joe. In the inspection classes at the London Dairy Show Mr. J. F. Remnant's Treacle 3rd was first for cows, second being Mr. H. Fitzwalter Plumptre's Donnington Juno, third being Mr. Remnant's Gold Cup of Hatch 2nd. Mr. A. W. Bailey Hawkins won for heifers with Merton Beauty the second prize falling to Mr. Norman's Goldstream 5th.

In the Guernsey butter test at the Bath and West Show first prize was awarded to Mr. A. W. Bailey Hawkins' Winter Green 5th, which had been 182 days in milk, gave 35 lb. 10 oz. milk, 1 lb. 8½ oz. butter, and received 36.50 points. Second was Col. St. Aubyn's Golden Horn 4th of Glynn, 39 days in milk, yielding 41 lb. 14 oz. milk and 1 lb. 15¾ oz. butter, and receiving 31.75 points. The open milk test for cows of any breed or cross, 900 lb. live weight or over, resulted in Mrs. Bainbridge's Guernsey Cherry taking first prize, her milk yield being 54 lb. 14 oz. (76 days in milk), and the points awarded 58.47. A butter test for Guernseys took place at the Royal Counties Windsor Show. First was Sir H. Lennard's Warbler, which received 45.60 points; she had been Bashaw, Mar. 6. Guernsey, Galley 2 130 days in milk; her yield was 39 lb. 6 oz., butter 2 lb. 4 oz. Second was Mr. J. F. Remnant's Wickham Hope 4th, 59 days in milk, milk yield 37 lb. 4 oz., butter 2 lb. 1¼ oz. Third was Mr. H. Fitzwalter Plumptre's Winter Green 7th, 155 days in milk, milk yield 28 lb., butter 1 lb. 7½ oz. Guernseys were much better represented at the London Dairy Show than of late years. Mr. H. Fitzwalter Plumptre was first in the milking trials with Donnington Juno (93.8 points), followed by Mr. Oakey's Brittleware Joy (93.3 points), Mr. Remant's Treacle 3rd taking third with 89.1 points. In the butter test for any breed Sir H. F. Lennard's Undine 2nd secured one of the £3 prizes with 38.75 points. Mr. Plumptre's Donnington Juno also won a prize with 34.80 points.

The Guernsey cow Ma Charmante 6th, 7747 E. G. H. B., bred by Mr. John C. Forster, Clatford Mills, Andover, recently, after her second calf, concluded her official test under the rules of the American Guernsey Cattle Club, viz., 15,149 lb. milk, 740 lb. butter-fat. Her dam, Ma Charmante 2nd, a splendid butter cow (having yielded 2 lb. 3¼ oz. off grass alone), has been frequently exhibited with success in England. Her sire, Clatford Hope 2nd, was out of Antona 7th, twice first at R. A. S. E., a member of a very well-known family. Ma Charmante 6th changed hands in America for 2,500 dollars

Guernseys Stand at the Top

IN spite of the rapid progress made in Wisconsin along the line of better dairy cows, we still have too many farmers with the poorest of scrub stock. When you urge one of these men to purchase a well bred bull, that he may improve on a losing proposition, he will tell you in a knowing way that he cannot see the use of expending big money for a blooded bull, because he always gets a calf, that answers the purpose, at the stock yards for a five dollar bill.

The cows of this herd are of every known color, and the best cattle judge in the world could not tell you exactly what blood they carried. I know one herd, the best producer of which has a body as black as a well fed African's cheek, a nose that shows a little of her Jersey ancestor of years ago, and a hind leg that shows some brindle.

Poor as these cattle are, and bitterly as this man is opposed to a pure bred sire, because of the price, you may induce him to buy a well marked Guernsey grade bull, sired by a registered animal and out of a high producing cow. Watch the result. Go into that barn the following year. See the yellow and white calves tied everywhere. Note the uniform color, the shield in the forehead, and the white marks over the hips and shoulders, a great improvement over the calf crop of the year before.

The farmer, his wife, and the children are pleased. They can look forward to the time when these young things are in milk, and they have a herd of uniform color, the blood of which they can at last give a name to.

Follow this herd until they come in milk, and then compare each animal with her mother. First of all we have the fine coat of white and fawn, a vast improvement over the old herd colors. Note the yellow skin, the larger flow of milk of a higher testing quality, milk that is to be produced at a lower cost.

Every fair minded farmer knows that you cannot get over $45 for one of those cows of unnamed blood. And the daughters,—what would they sell for? A well marked Guernsey heifer, with her first calf, will bring $75. Mature Guernsey cows in this section, even those sired by grade bulls, are worth and will bring $100. Mature Guernsey cows sired by registered bulls, are sold for as high as $200 each. Why? Because city dairymen and far seeing farmers are alive to the fact that the Guernsey cow is the most economical producer of milk and butter today.

The consumers of milk in all the cities are demanding better milk, richer milk, and the Guernsey cow is the dealer's salvation. The Guernsey cow is not only the milk dealer's cow. She is also the farmer's cow. She will produce more rich milk with the amount of food consumed, than cows of any other breed. This has been proven by tests at the New York and New Jersey experimental stations.

The Guernsey herds stand at the top at the creameries. Milk condensers, too, prove the worth of the Guernsey cow. The Pacific Coast Condenser Company, located here, pay by test, using 4% as a basis. For instance, the price of 4% milk is $1.65 per hundred. How many Holstein herds will average near 4%? They will get around $1.50 for their product. Owners of Guernsey herds receive $2.10 and upwards, because of high tests.

Yearly records are what prove the worth of a cow. Any ordinary cow ought to do well for at least a week. But the Guernsey cow must produce well for a full year, and the large number in the advanced registry, prove the worth of the Guernsey.

I am personally acquainted with the records of the first two daughters in milk sired by the Guernsey bull "Marcia's Glenwood of Pinehurst," owned by Mr. Coffin of Eau Claire, Wisconsin. These two heifers entered the Illinois dairy contest. They finished second and third over all breeds under three years of age, and third and fourth over all breeds and cows of any age. Your readers are all familiar with the work of those other Glenwood Guernseys "Dairymaid of Pinehurst" and "Jedetta of Pinehurst" in the Iowa contest.

Guernsey breeders can do much for the Guernsey cause, and at the same time help the owner of scrub cattle to work into higher producing cows by first proving to him the merits of the Guernsey, and then selling him a pure bred sire at a reasonable figure. E. M. Fitz Maurice, Berlin, Wis.

Michigan Guernsey Breeders' Association

AT the annual meeting of the Michigan Guernsey Breeders' Association, held at Lansing, January 14, the following officers were elected: President, G. D. Eggleston, Parma; Vice Presidents, Charles K. Angevine, Coldwater, William L. Burruss, Parma, H. E. Squires, Decker; Secretary and Treasurer, C. G. Parnall, Jackson.

Mr. E. T. Gill of Haddonfield, N. J., read the following interesting paper.

The little island of Guernsey with its 24 square miles is famous the world over as the home of the Guernsey cow. The climate, soil, and the small farms into which the island is divided, are all favorable factors for her development. The foundation stock must have been good, and the interbreeding only of the best, and these, with the possibility of excluding all foreign blood, enabled these island farmers to achieve a great success. Rich yellow milk being their sole objective point, their progress under these favorable surroundings, was positive, and a high average was obtained. The superiority of the Guernsey is largely due to the fact that the island breeders have not attempted too much. Quality has been their chief desire.

A farmer who keeps from 4 to 10 cows and occupies from 5 to 10 acres, on which to feed them, can afford to retain only the best, he can get among his breeding animals.

When he pays from $30 to $50 per acre rent, good cows become a necessity, and to meet such payments and prosper indicates more than average economy, good management, and good cows. That these island farmers have maintained a larger number of cattle per acre than can be found in any other land, indicates ability of no mean order. That they have long known the superior merits of their cattle is shown in the fact that they have excluded by law all other breeds of cattle from their island for more than 100 years. Whether the distinct types now known as Jerseys and Guernseys, had a common origin is not known. That there was in their earlier history a nearer likeness both in external appearances and other qualities, is certain.

Until about 25 years ago Guernseys were kept in America chiefly for family use, The Biddles, Fishers, Dr. King and other about Philadelphia, have had them on their farms since 1840. About the year 1865 the Fowlers began importing a few Guer-

About the year 1865 the Fowlers began importing a few Guernseys with their large importations of Jerseys. These were made the foundation of several herds that were increased by breeding and other importation. One of the largest of these was established by Thomas M. Harvey of Pennsylvania. Our ex-president Mr. Codman, Mr. Bowditch, and others of Massachusetts, visited the island some years later, and selected Guernsey cattle for their personal use. Soon it became obvious to the gentlemen who had become interested in Guernseys that some organization was necessary to preserve their purity, and to encourage further importations. Accordingly a meeting was called at the Astor House, New York, Feb. 7, 1887 for the purpose of organizing the American Guernsey Cattle Club. At this time there were not more than 150 Guernseys in all the states, whose pedigrees could be traced to the island. In December 1878, nearly 2 years later, the first Herd Register was issued and recorded 334 cows and 131 bulls. Since that time the growth of the Herd Register has steadily increased, and in May last there were recorded in the Herd Registry 44,508 cows and 24,848 bulls, while the expenditure for the year was $62,476.40, which with a balance on hand of $2,203.09 shows the entire income of the club to have been $64,679.49. The club has in saving banks $1,686.04. The value of the office building in Peterborough, N. Y., is $12,000. This, with invested funds, furniture, etc., makes the financial standing of the club, at that date, $32,540.63, and no liabilities. There is not a more industrious or better systematized office building in New Hampshire than is that of the American Guernsey Cattle Club, and our members are indeed to be congratulated in having it thus. The advanced registry work continues to grow and is spreading farther west and south each year. It may be of interest to note that at the close of the year 1913 we find 1026 cows representing 169 breeders at work in the advanced registry, while the 2698 cows already in the advanced registry average 8481.4 pounds of milk and 424.2 lbs. of fat with an average of over 5% butter-fat, and our 35 leading Guernseys average 14,185.14 lbs. of milk and 756.27 lbs. of butter-fat, an average of 5.33% fat.

It was my good fortune a few weeks ago, to visit Mr. E. B. Cassatt of Berwyn, Pa., and see his great cow May Rilma, a cow, that, barring accident, will beat the 1000 lb. mark and may, under favorable circumstances, excel the Holstein record of 1058 lbs. Though this cow is not a show cow, she possesses constitutional vigor and desirable characteristics most necessary to a dairy cow, and as you stand and view her, you are impressed with the invisible powers within.

The first Guernsey Breeders Association of America was organized Feb. 5, 1884 at the rooms in the Old Philadelphia Society for the promotion of Agriculture. There were fifteen gentlemen present, and it was my good fortune at these meetings to associate with most of the men who were instrumental in preserving as pure breds the Guernseys of America, such as Geo. Blight, Silas Betts, Thos. M. Harvey, Samuel Kent, Judge Biddle, A. J. Cassatt, Ezra Michener and others. The papers read at these meetings, the good natured and witty debates, I will never forget. Let me quote from a paper by Silas Betts that which may, in a way, apply today: "Foundation stock must come from the island and the better this stock, the greater the demand will be here. Poor Guernseys are not wanted at any price. There is already a surfit of indifferent dairy animals in this country. Nor is it desirable to apply any unnecessary stimulant to excite extravagant prices. Let good breeding and improved stock be our chief reliance, before any corner in prices is attempted. There are not enough good cows any where to justify a universal rise in price, and if importers have found that poor stock does not pay to bring over, let them bring the best; such rarely fails to command a good price. Our increase will thus be slower, but the good results will justify patience." In discussion, Mr. Hazard said "there have been too many cows brought over merely as a mercantile transaction, and which are, in a great measure, devoid of the qualities of the Guernsey cow."

"In January, 1885, the Publicity Committee, through Mr. Betts, stated that Willis P. Hazard would publish monthly reports of the work of the Association in the interest of the Guernsey cow, provided the Association would contribute $300. for one year. For any further expense, Mr. Hazard was to re-imburse himself from the proceeds of the publication. It was my good fortune, with the other members of the Association, to assist in financing the first American publication in the interest of the Guernsey cow—the Guernsey Breeders Journal, the first number of which I hold in my hand. Compare it with the one of today, published by the A. G. C. C., with a monthly circulation of 2,600, and going into every state in the Union but three, as well as into Canada, England, Australia and Guernsey. There is nothing like it printed in the interest of the Guernseys and surely no American breeder can do without it.

It may be of interest to know how I first fell in love with the Guernseys. About 1880 at Boarding School, I visited with a companion, a noted Jersey herd belonging to Mr. Samuel Sharpless, near Westtown, Pa. It was my good fortune at this time to meet one of natures own gentlemen, Thos. M. Harvey, a charter member of the A. G. C. C. When this kindly old gentleman learned of my fondness for pure bred stock, he told me of his long experience with the Jersey and other cows and why he discarded all for the Guernsey. The Guernsey, he said, produced in winter on dry feed yellow butter that needed no coloring, and was of the finest flavor. Her constitution was far superior to that of the Jersey, while Guernsey bulls crossed on common cows made wonderful improvement. I was impressed and immediately began to save my money, so that by vacation I had $100 saved up, with which I visited Mr. Harvey and bought my first Guernsey calf. She had a black nose, was dark about the eyes and resembled a Jersey in color, but she was my first, and I was a proud boy. This calf was registered as Annie 544, dropped Oct. 20, 1880, and sired by Imported Sir Champion 38, a great bull, whose blood figures in many of the noted animals of today. His escutcheon was remarkable having wonderful thigh ovals that breeders traveled miles to see. This was the day of the Guenon system of judging, and I myself know from the escutcheon alone more of a cow than I know today by a careful study of her entire body. About this time two prominent Guernsey men and students of the Guenon system gave a public demonstration of its value with a number of cows near Philadelphia, the cows being covered so that little more than the escutcheons were exposed. I have always regretted that I was unable to get to this meeting, but I understand that these gentlemen came about as near to the true characteristics of the cows as they could have done had the cows tails been stuck through a knot hole as the only visible part. Yet, for some unknown reason, to this day, I like to see a good escutcheon, simply as one of the many good points of a cow, and not as the only standard by which to judge her. My heifer had a great escutcheon, and made as a 2 year old 10 lbs. 6 oz. of churned butter in a week. From this on I began purchasing imported and home bred animals, but most of them failed to come up to my standard, and were soon sold. I retained only for my foundation three great cows, Lucretia 802, a cow of the old Biddle strain, whose granddaughters are yet with me; imported Bess of Ogier 835, to whom I bred Darius of Sunnyside 2716, a grandson of old Sir Champion 38, and so got Pat of Haddon, the first bull in the A. R., who in turn, sired four of the first cows in the A. R. besides the noted Glenwood Boy of Haddon. Hard luck seemed to follow the calves of this wonderful old cow, and Pat of Haddon was all the progeny she left worthy to perpetuate her blood. My best purchase was when I secured imported Glenwood Girl 1693, dropped February 7, 1884, at the Ledyards sale in Philadelphia, Sept. 23, 1884. She was a fat thick necked heifer, with four well placed teats, and quite an udder for a six month calf; deep in body and with evident constitution. She had a beautiful escutcheon, and that, with the color of her skin, attracted me most. At the New York State Fair, she had just taken first prize.

In 1898, in her 15th year, because of an injury to her back, she was killed. Her breeding record was two abortions, five bulls (two died as calves and three were used only in grade herds) and seven daughters, all of which I kept until they died, the three younger are in the A. R., while the four older ones had good home records. Glenwood Girl was no accident; her sire, Meteor, was out of a cow with a record of 16 lbs. of Guernsey butter. I bred her to Kalmia 740, a half brother to the great cow Materna, and got Glenwood Girl 2d, with a record of 593.4 lbs. the dam of Glenwood Boy of Haddon, who sired Dairy Maid and Jedetta of Pinehurst and other noted animals. Another daughter was Glenwood Girl 6th 9113, and the first cow in the A. R. In two milkings a day this cow gave as much as 63 lbs. She started in the test after milking six weeks and calved the next week after completing the year's work, and made 12187.3 lbs. of milk and 572.3 lbs. of fat. She ran with a herd of forty cows, stood in a stanchion and had very ordinary treatment and little of my personal attention, as I was lumbering in Virginia. I have always felt that if this cow had had modern opportunity, she would have made a wonderful record. Of the great cows of the past, beside Glenwood Girl and her daughters, I recall Rutilla's daughter, Materna, Fantine 2d, Morn, Maranda, and other wonderful cows that were capable under present day methods of great records. In conversation with J. L. Hope, of Madison, N. J., recently, he said that in looking back over the great cows of their herd, he felt that Rutilla's Daughter was the greatest cow that had ever been at Florham Farms.

The type of the early importations was a big, well-boned cow with a wonderfully yellow hide, but many of them had poor shaped udders and teats so close that you would skin your knuckles milking them. Good udders and teats were, of course, appreciated by the early breeders, but the color of their skin, and their ability to produce yellow milk and butter economically is what first called their attention to the Guernsey cow, a fact too often forgotten by the breeders of today, who think too much of the amount of fat produced, and not enough of quality. Do you know that with that orange color goes a sweet nutty flavor? Abroad I have seen Guernsey butter command a price higher than that of any other breed, for there, it is unsalted and no artificial color applied. In this natural condition you get the full flavor, and lift your hat with respect to the queen of cows, who in all the world stands alone in this particular characteristic.

The Guernsey breeders of today have great advantages over those of thirty years ago, who could purchase only animals with little, if any, pedigree, and with no official records of their ancestors; for the characteristics of the progeny is not entirely the result of the sire and dam, but may represent any of the ancestors back for several generations. When I refer to breeders, I do not mean men who merely keep registered Guernsey cows and are willing to sell anything in their herd at a price; they are simply dealers; but a real breeder is one who buys his first animals with the idea of establishing a herd, from which, according to his own judgment, he can reproduce his ideal cow. Then, by breeding and selecting from several generations that he has seen grow up under his supervision and study, he will keep animals that money cannot take from him, and because of his familiarity with generations of these individuals, and his knowledge of the certain crosses that knick favorably, he can line breed and inbreed with confidence; for by selection, breeding and feeding alone, can wonders be accomplished. It is by so breeding that prepotency can be established and prepotency is the keynote to successful breeding. Always bear in mind that inbreeding is an intensifier. It intensifies weaknesses as well as virtues, and it is by rare skill and untiring energy that great results are accomplished. Of the five bulls used on Haddon Farm, four were bred there and the fifth is out of Miranda of Mapleton, the long distance record cow of the world, while she in turn was sired by Glenwood's Mainstay 2d, all of the Glenwood blood.

To my friends who are beginning the breeding of Guernseys, I would suggest. Don't buy bulls out of phenomenal record cows, that have no ancestry. The great Jersey Bell of Situate set the Jersey breeders afire in her day, and her sons sold for thousands of dollars, and were failures. She was a beautiful cow, and a wonderful producer, but had no ancestry. Always look for individual excellence and ancestry in a breeding sire.

Guernsey Jottings

Barras Raymond of Lewison 16150

Sire Imp. Raymond of the Preel 11353 Dam Imp France's Daisy of the Barras 24828
Owner W. L. Windom, Duluth, Minn.

Guernsey Breeders' Journal:

Our herd consists of pure bred, and some grade Guernseys, and we consider the grade just as good for milk and butter fat production as the pure bred.

We have never done any advanced register testing because circumstances haven't been favorable for doing so. Neither have we kept an exact account of each cow in the herd. We have kept an account of the amount of butter fat and milk sold from the entire herd for three years, and weighed and tested the milk occasionally, from each cow, so we know pretty well whether they are profitable or not.

We tested and culled our grades for a number of years. We feed rather light, about 3½ lbs. of dried brewers grains, per day, (soaked) and about the same of ground oats, (dry.) A heaping bushel basket of corn silage between two cows twice daily, and what hay they will eat up clean twice a day. Alfalfa hay usually.

We separate the milk and cream and send the cream to the creamery. The average amount received per cow was: 1st. year, $80.00; 2nd year, $82.00; 3rd year, $98.00. Besides this, we made our own butter and used what milk and cream we needed. The pure bred Guernsey can't be beat to grade up a herd with.

A near neighbor has been using our sires, and recently sold his entire bunch of grade cows for $150.00 each. They were crossed on grade Durhams, the milking strain.

Our surplus bulls have all been sold near home and they invariably add $25.00 to $75.00 to every heifer raised. These grades are now bringing from $100 to $150 each.

Crouch Bros

Jackson County Guernsey Breeders Association.

The Annual Meeting of the Guernsey Breeders' Association of Jackson Co., Wis., was held at Alma Center, Wis., January 24, 1914. The meeting was well attended. Most of the members were present, also many farmers in the neighborhood. This association was organized six years ago with eleven members. There were about twelve head of pure bred Guernseys in the County at that time. The association is now composed of twenty-five members, and we have ninety-six pure bred Guernseys in the County.

The grade Guernsey cow is gaining ground here each year. People that use a pure bred Guernsey bull on their common stock are getting heifers that are higher testers and give as much milk and sometimes more than did their dams. This is the result of the first cross. There seems to be good demand for grade heifers sired by pure bred Guernsey bulls.

The following officers were elected for the coming year:

President, E. W. Hawley, Alma Center, Wis.; Sec. and Treas., Wm. F. Dettinger, Hixton, Wis.; members of the Executive Committee, Chas. S. Ristow, Black River Falls, Wis., John P. Engleman, Hixton, Wis., A. Pachernigg, Taylor, Wis.

Wm. F. Dettinger, Secretary.

From Office Correspondence.

To the Guernsey Club, Peterborough, N. H.

Dear Sirs:—

I see in the Amarican Agriculturist paper of January 31th, 1913, your little advertisement a bout your Cow. asking the reader to let you tell sumpthing about her.
you call her guernsey, the utility cow, so I ask you to tell me sumpthing about her, as I would like to buy.
Pleas. What you may say, let it be the Truth and nuthing more. when will she be fresh to pale. how old. What milk capasity. what Butter capasity.When well fed, do she milk hard or easy. is she gentle to milk. how mutch will she weigh what culler is her hair. is she dehorned. What will you deliver her to my station for. in good condition. as enny one mite espect.
I am not making inquiry for the fun of it, but in cincerity. and I want the honest Reply. if you answer at all. hope to hear favorable from you son. What stock is she. Is she thur Bred. Oblige. O. B.

R. W. Anderson of Lindstrom, Minn., writes: Every number of the Journal makes me more enthusiastic about the Guernsey. I have just recently purchased our first pure bred females, a pair of imported heifers from Mr. C. L. Hill, so that I am just joining the ranks of breeders.

Why not Guernseys for South West.

One of the members of this Club, in returning a vote, says: Roswell, N. M., is in the wonderful Pecos River Valley, one of the Garden spots of this country. Within the past year a creamery has been erected, and many of the orchard and alfalfa land owners are going into dairying. A car load of milking Shorthorns came here a few weeks ago and a consignment of forty Holsteins arrived today.

Milk and butter are high and I believe a pound of butter can be produced here cheaper than any place I know of. With from eight to eleven tons of the finest alfalfa per acre, 100 to 120 bushels of our large Indian corn per acre, 100 bushels of oats per acre, not mentioning other cereals, you can readily understand what a gallon of milk or a pound of butter will cost from high or pure bred cows. A. F.

Mr. W. M. Banford of Chilliwack, B. C., writes that his cow, Dolly of Willow, is the champion Guernsey cow of Canada and Grand Champion of Western Canada. She was bred by Roper Bros., Prince Edward Island. Mr. Banford states this animal has been a prize winner from a calf.

Dolly of Willow
W. M. Banford, Owner, Chilliwack, B. C.

In 1912, she won first prize and was champion at the Dominion Exhibition held at Ottawa; also the same through the Maritime Provinces and Prince Edward Island.

In 1913, she was bought by Banford Bros. and exhibited through Western Canada, was awarded first in cow class, also champion of the breed and Gold Medal for best female of all breeds at Vancouver, B. C. The same honor was awarded her at Vicoria and New Westminster.

Pepin County, Wisconsin, Organizes Guernsey Association.

A few of the prominent dairymen gathered in the Court House of Pepin County, Wisconsin, on February 28, and organized the Inter-County Guernsey Breeders' Association, electing the following officers: President, Geo. Sankey, Durand, Wis.; 1st Vice President, Wm. Harmon, Arkansaw; 2d Vice President; W. H. Biddick, Downsville; Secretary, Geo. F. Krampeter, Mondovi.

The Inter-County includes the counties of Buffalo, Pepin, Pierce and Dunn. Ten members were enrolled with a membership fee of two dollars a year.

We wish this new organization much success.

Guernseys Gaining.

A recent meeting of the Guernsey Breeders' Association of Stanley, Wis., discloses the fact that Guernseys are fast gaining in favor. Since the organization of the association a year ago, twenty head of pure-bred Guernseys have been brought in.

The secretary, Mr. Ole Samuelson, says in his annual report that there are now fifty-six pure bred and two hundred and twenty-four grade Guernseys owned by the members.

H. W. Griswold of West Salem, Wis. writes he has just purchased of Mr. C. C. Allen of Kenosha a son of Princess Deasie who is now third in the two year old class and under re-entry is making a much larger record. She is a daughter of Queen Regent who promises to make over 700 lbs. fat this year.

Mr. C. C. Allen of Kenosha has just purchased a son of Golden Elsie II. She is now second in the two-year-old class and milking 65 lbs. daily under re-test. He also purchased of Dr. Russell her full sister.

From Washington comes the following:—"I have been in the market some time for a Guernsey bull as I believe they are in the coming dairy cattle. I want a bull to head a herd of mixed grade cows. As I am a new man in the business, the Guernsey breed is like French to a Dutchman, but I am going to learn it just the same. We have only a few as yet in this Northwest country, and not being a judge and not having money or time to waste, I want all the information I can get before buying."

A breeder of Holsteins from Massachusetts writes: "I intend to give up Holsteins and get Registered Guernseys as soon as I can make the change."

SECOND ANNUAL MEETING AND BANQUET.

Fort Atkinson Guernsey Breeders Association.

Editor of Guernsey Breeders' Journal:

I yesterday attended a banquet of the Fort Atkinson Guernsey Breeders' Association and was particularly pleased with the arrangements of the details of the meeting as made by President Merriman and Secretary Heid. I enclose copy of the menu which was printed on yellow paper, the tables were decorated with daffodils, the napkins were yellow, the waitresses wore yellow aprons and caps and the yellow scheme was even carried out with the food as far as possible by serving of course, yellow butter, Hubbard squash, yellow ice cream, yellow cake with yellow frosting and the salted nuts were served in yellow paper dishes.

Over 125 sat down at the banquet and great enthusiasm was manifested for Guernsey cows. The average of $288 each made at Mr. Krumheuer's for a herd where none of the cows had been officially tested had been pleasing to the Fort Atkinson Breeders especially when nearly all of the animals staid right at home. One of the grade cows purchased at the sale for $150 or $160 was sold next day for $200. The breeders report a continual procession of buyers for grade cows from all over the United States and the wonder is that it is possible to get so many good ones together to supply the demand.

At the suggestion of Mr. E. H. Webster of Hoards Dairyman they are thinking of taking up a new line of work intended to encourage the use of only aged tried sires in their herds, changing these from one herd to another as necessary, feeling sure that in this way they can rapidly increase the average merits of cattle raised.

CHARLES L. HILL.

The Home of The Selma's and The Jedetta's

(Continued from Page 22)

26, 1900, on the place and was sired by Khedive of Pinehurst 6537, and out of Viola Dudley 11533, who like Jedetta's parents produced no other remarkable progeny. She was put on test when she calved as a three and a half year old, and standing in the stanchion with ordinary herd care as was the case in her two subsequent records,—she made 8567.80 pound of milk and 544.06 pounds of butter fat during the year. On October 18, 1906, she was again put on test and made during that year 9563.10 pounds of milk and 615,97 pounds of butter fat, carrying a calf the full nine months.

Her third record was started September 8, 1908, and during the year she produced 10,064.70 pounds of milk and 644.65 pounds of butter fat, and in her fourth official test started May 1, 1910, she made 13,383.30 pounds of milk and 762.88 pounds of fat, and since finishing her last record, has dropped a pair of twin heifers, now great big busters over a year old, and a bull calf not yet registered.

Her first calf was Selma of Pinehurst 2d 19626, A. R. 624, born July 12, 1904, and sired by Glenwood Boy of Haddon 4605. She is the dam of four female and three male progeny and has made the following records. At two years and five months of age, she made 7078.00 pounds of milk and 430.01 pounds of butter fat, and at five years and four months of age, 8728.90 pounds of milk and 489.68 pounds of butter fat. She was sold in February 1911, to A. W. & F. E. Fox, of Waukesha, Wisconsin, for whom she and her daughter, Selma A of Pinehurst 26296, won many prizes on the show circuit.

Her next calf was Selma of Pinehurst 3d 23798, A. R. 786, born October 27, 1905, and sired by Glenwood Boy of Haddon 4605. She has two records, one made as a two year old of 9035.60 pounds of milk and 472.97 pounds of butter fat, and the other of three years and five months of age of 8893.60 pounds of milk and 512.98 pounds of butter fat, and is now under a third test and making a much larger record. She is the dam of three bulls and one cow, Marguerite of Pinehurst 24658, A. R. 1296, (mentioned above) who at two years of age made 10,431.80 pounds of milk and 493.26 pounds of butter fat and at four years, made 13,662.50 pounds of milk and 643.87 pounds of butter fat.

Her third calf was a bull, Selma's Glenwood 12596, born October 18, 1906, sired by Glenwood Boy of Haddon 4605, and sold when a calf to Charles L. Hill of Rosendale, Wisconsin, where he has sired four Advanced Register daughters, and has many more now under test.

Her fourth calf was Selma of Pinehurst 4th, born October 18, 1907, sired by Glenwood Boy of Haddon 4605, with three official records. As a two year old she made 8955.40 pounds of milk and 487.57 pounds of fat, and on subsequent re-entry made in nine months 8819.60 pounds of milk and 553.61 pounds of butter fat. She is now making her fourth record, and has milked up to fifty-six pounds of milk per day.

Her fifth calf was the bull Selma's Stranford of Pinehurst 14157, born September 8, 1908, sired by Stranford's Glenwood of Pinehurst 13609, and sold to Dr. Truman W. Brophy of Chicago, Illinois, where he is siring a fine lot of individuals.

Her sixth calf was Selma of Pinehurst 5th 32811, sired by Stranford's Glenwood of Pinehurst 13609, and sold to T. E. Hyde of Bloomsburg, Pennsylvania, when three years old.

To this excellent herd of American bred Guernseys, Mrs. Strawbridge is now introducing some of the best blood of the Island in a late importation of four daughters and one grandson of Governor of the Chene, and, if the past accomplishments in breeding are any indication of what will be done in the future, some animals and families even more remarkable than those mentioned above are bound soon to appear.—H.

Michigan Guernsey Breeders' Association

(Continued from Page 27)

I might say, in passing, that for myself, contrary to the judgment of other breeders, I prefer a bull with two of his rudimentaries on the scrotum and two well ahead. I care nothing for the size, if they are only well apart.

Don't breed mongrel pure breds by buying first a bull from one breeder and then from another of different families. They may be from excellent cows with big records, but the lines of breeding and the types may vary greatly, and, in time, you will have a Heinz herd—57 varieties. Stick to one line of breeding and to a type if you wish to achieve success. To keep the type of a cow before you, remember the three Bs, Belly, Brains and Bag, a homely but forceful way of remembering a good thing.

The Belly indicates constitution and capacity.

The Brain indicates the great nerve force that carries the cow to successful achievements.

The Bag must be of proper formation and consistency for the secretion of the milk.

If the three Bs are right, all the necessary points for a producer will be there even the escutcheon. Don't use a bull from a cow that is a shy breeder. Don't discard cows because they are not show cows. They may be down in the back a bit, as unfortunately many of our great cows are, or they may have black noses and be badly colored, but don't let fads and fancies discourage you as long as you have the three Bs. Of course, encourage beauty, but let utility rather than beauty be your guiding factor, and profit by the mistakes of some of our Jersey friends. Every man who breeds a better cow is serving his country as surely as did George Washington, for in this highly civilized day, the cow is the **mother** of our country. It is impossible for a man to attain any measure of success or satisfaction in his breeding operations unless he loves or likes his animals and delights in associating with his charges.

The man who lacks confidence in either himself or his animals will surely lack the degree of enthusiasm necessary for success.

The scale of points adopted by the A. G. C. C. is about as good as can be, and displays the wisdom of that grand old man, ex-Governor Hoard who has done so much for the dairy cow and his fellow man, and yet they fail to tell the tale and the judgment of the man in the ring is final. Whatever animal he places first, he is expected to follow with the same type, and so he may discard good cows for inferior ones if he allows fads and fancies and the criticisms of the rail birds to influence him. Exhibitors say if such a man judges, I take these cows to the show, and if so-and-so judges, I take another type. Are judges born or taught? Many artists may paint from practive and education, but the real artist is born, and to his talent adds education and experience and then he sees in his mind's eye the unseen. A real judge must have the instinctive insight as well as the training, and until better ways of judging are discovered, would it not be wise at our shows to have one acting judge and two advisory judges, who must be practical breeders. Surely the judgment of three is superior to that of one, and there should be less delay, as the acting judge places the animals and submits his decisions to the advisory judges before the ribbons are placed.

The future of the Guernsey cow depends upon the wisdom of the breeders, their honesty and their zeal as well as upon the efficiency of our secretary and the executive committee, whose characters and experiences as practical breeders mean so much for the success of the Guernsey cow.

Annual Meeting and Lunch of the Guernsey Club of Boston

ON February 25, the seventy-five Guernsey breeders met at Young's Hotel. After a well served and bountiful lunch, Mr. Charles H. Jones presiding, the following were the speakers.

Mr. Robert Scoville, of New York, was called upon, as representing The American Guernsey Cattle Club. He expressed the greeting of that Club, and added that they must look to the local associations to foster the enthusiasm that was so necessary to advance the Guernsey interests. He referred to the talk given before the Eastern Guernsey Breeders' Association in Philadelphia, regarding uniformity in type. He said that the speaker made his talk a series of unanswered interrogations, which were evidently designed to leave the matter for each to decide for himself.

It is easy to find out in the beef breeds the answer to many of the problems in breeding, but when it comes up to the fine qualities so essential in the dairy cow, there will undoubtedly be room for debate for years to come. It will probably be harder and harder as we progress with our work. He referred to the valuable aid which the list of great sires and dams was to the breeder, and said that a new and revised edition of same would soon be published.

Dr. Theobold Smith was the next speaker, and his topic was Aids in Keeping One's Herds Free from Disease. If one is to succeed in this respect, he will surely win with the Guernsey.

It is the antagonism of infectious germs to the efforts of the breeder that makes the danger. If much of the quality and energy of one's animals is combated just so much harder must be the work of the breeder. It behooves the breeder to keep infection away. This may come from accident, if so and it is promptly handled and rightly cared for, the results will not be serious. The greatest danger line is the problem of those animals, apparently healthy, but who are what we term germ carriers. They are the ones who give to those whose systems are at low ebb the seat of trouble, which we wish to avoid. It is from such that many of the infectious conditions arise.

The three great diseases which all breeds must fight are Tuberculosis, Pneumonia and Abortion. At one time it was thought that vaccination was to be one aid in combating, but it is not the way to fight them. He especially referred to the use of the Behring method recommended in connection with Tuberculosis and did not advocate it. He referred to some work which had been under his observation in the injection of dead bacteria for combative purposes similar to the work in the army relative to checking the spread of typhoid fever. This winter some animals on whom this manner was tried, died from the disease as easily as those not receiving that treatment. He believed the whole effort of the breeder should be along the line of careful quarantine, and referred to the work which had been done in connection with a large herd of cattle in New York state.

"The number of animals comprised in the study is 425. The animals were originally selected because of their desirability from the standpoint of breeders and milkers or because of their "type" and entirely independent of their being or not being tuberculous.

The tuberculous animals greatly outnumbered the non-tuberculous and in most instances several generations of tuberculosis on both sides is known to have existed, 300 tuberculous animals were studied. The existence of tuberculosis was determined by the administration of treble the official dose of tuberculin, repeated in non-reacting animals three times at intervals of six months. All animals reacting to either test were removed at once to the tuberculous farm, the administration of which is entirely separate from that of the non-reacting herd. Little or no possibility of the transmission of infection from the tuberculous group to the healthy one exists.

"With few exceptions tuberculous cows are bred to tuberculous bulls, the selection in any case is made for purposes of "type" and no account of the infection is taken in so far as breeding is concerned.

"At birth the calves are immediately taken from the mother and no possible communication thenceforth exists between them except that the calf is given by bottle one feeding of the first milk secretion of the mother, removed by stripping and fed unsterilized. All subsequent feedings are made from a modified formula, based on pasteurized milk collected in discriminately from sound and tuberculous animals. The feedings are made directly after pasteurization and before the milk has been cooled; pasteurization is begun immediately after the milk has been collected and before it has lost its natural heat.

"Over 200 calves have been born of the tuberculous herd, not one has become tuberculous though all have been tested three times by massive doses of tuberculin. Some evidence exists tending to indicate that these animals are rather more resistant to tuberculosis than animals born of non-tuberculous parents.

"No falling off in type, in milk production or fertility is present in these calves, no increased death exists among them as compared with the offspring of healthy cattle. We may also add that no falling off in value takes place and among calves of this ancestry are several of the most valuable cows and bulls in the world. These facts remain constant even where at least three generations of known tuberculous parentage exists.

"As to the condition of the tuberculous animals themselves. None showing gross evidence of the disease are kept but in so far as the other reactors are concerned, practically all the world records as to fertility, milk and cream production are held by animals either themselves thus infected or who are offspring of tuberculous ancestry.

"The object of the experiment is to produce a herd of dairy cattle entirely free from tuberculous taint and yet endowed with all the most valuable strain characteristics possessed by this breed of stock."

The Dr. answered many questions in regard to bovine tuberculosis being communicable to humans. He felt the danger was two-fold; in drinking milk and inhaling from the stable atmosphere. He felt that in cases of tuberculosis among children, about one-fourth was due to the drinking of milk. With adults the danger was much lessened. He felt that the lung type of tuberculosis was not readily communicated. Bovine germ had been found in the sputum, but out of several hundred tests it was in a negligible quantity. The glandular form of tuberculosis, especially in children, he felt, might come from the bovine.

The next speaker was Prof. W. T. Castle of the Bussey Institute: He said that next to the health of the herd the greatest matter of interest that confronted the animal breeder was that of the laws which govern reproduction. He did not propose to discuss more than the general principles that guided the breeder. The question of the selection would not be the same with different breeds. Not all breeders would make the same matings, but undoubtedly all would be made through the same with different breeds. Not all breeders would make the same matings, but undoubteday all would be made through the same general principles. There are certain shapes of udder, certain class characteristics that are correlated. It is the province of the breeder of the different classes of stock to so interpret these, as to make up their estimate of the animal to represent their ideal type or the ideal type of the breed. He said there were certain of the principles underlying the work that were not correlated, as for instance you could change the color of the animal or could breed horns off. Neither would have anything to do with the question of milk production. The question was how wide is the application of these principles in practice. Especially, in this connection did he point out the Mendel law. It is much easier to apply such in the question of plants, but it is a much more complex matter in case you use same in connection with animal breeding. To accomplish work in this line one has got to select two potent factors. When these are crossed results are so wide that one may lose some characteristics that he may wish to hold. On the other hand if one too closely inbreeds he may invite weakness. The accomplishment of this purpose is dependent upon how successful one is in getting all the qualities one may wish to perpetuate, into one group. Cross-breeding is of no great use in forming characteristics. You may bring increased vigor or size. It may be of some service in the question of beef products where the individual is to go for slaughter, but to produce animals of characteristics you wish to perpetuate by further breeding the results are not as successful.

In summarizing, he said he considered that the breed characteristics were independent and not correlated to those of production. 2d. The independence shown in inheritance has great limit.

He felt it was safer to expect results from careful selection of animals of different families within the breed than to look to out-crossing for results. He believed it more desirable to develop several good families within the breed.

He referred to the literature of theoretical breeding and especially commended the Journal of Heredity, published by the American Genetic Association of Washington, D. C. In answer to the question of which ancester has most control over production, he said he could only answer that from the work in special classes, referring especially to the question of porduction of eggs where it was found that the male was more influential.

Mr. Louis E. P. Smith was called upon, and urged the Guernsey breeders to use every effort to make the Guernsey showing at the Middlesex Fair of value to the breed.

Mr. E. A. Walter, President Western Guernsey Breeders Association was present and brought greetings and referred to the work being done in that section.

Mr. James M. Codman, when called upon, said he could not but urge the breeders to still remember the golden Guernsey cow and that she would speak for herself. Spread the white hairs, note the golden color next to the skin, the one characteristic which has made the breed famous, and he believed it was more to the interest of the breeder to favor this than it was the color of the hair, or the nose.

Mr. N. I. Bowditch spoke also regarding the Guernsey showing at the Middlesex Fair, and urged all to make an effort to help the cause along.

Island News

R. G. A, & H. Society

THERE was a very fair attendance on Thursday at the 72nd annual general meeting of the Royal Guernsey Agricultural and Horticultural Society held at the Market Hall, under the presidency of Mr. Osmond Priaulx, one of the Vice-Presidents.

The Chairman opened the meeting by stating he would be pleased if there were no recriminations during the proceedings which promised to be of a lengthy character, and that they proceed with the work as quickly as possible and for the benefit of the Society.

The minutes of the last annual general meeting were first of all to be taken as read, but a member objected and the Secretary had to read them.

At the close the chairman asked the member if he had any questions to put and a reply in the negative was given.

Eventually the minutes were unanimously adopted on the proposition of Mr. James Le Page.

The Secretary's annual report was read. The balance sheet for the year's working which was taken as read showed a debit balance of £2 17s. 5½d. on the General Account, the expenditure being £1, 157 6d. 11½d. The herd book department showed £427 5s. credit balance; the Milk and Butter Test account showed £33 10s. 10d. debit balance. The total surplus belonging to the Society, on January 1, 1913, was £739 14c. 10½d.

The Secretary in his report referred to the loss the Society had suffered through the death of Colonel bell, C. B.

The demand for Guernsey cattle was yearly increasing, and the Guernsey cow was known nerrly all over the world as a milk and butter producer of the highest order. This fact was mainly due to the efforts of their late president in keeping the English ports open to local shipments.

The combined cattle and flower show held at Beau Sejour in August last proved a success.

With regard to the Herd Book section, over 1,300 Pedigree and about 200 Foundation Stock animals have been registered during the year. About 1,000 animals have been exported, the greater number to America, the others going to England, France, Brazil, and Australia.

During the year several animals have been entered in the Milk and Butter Test Department, and good records had been obtained.

Capt. McCrea drew attention to the comparatively small expenditure for advertising, £97 15s. 3d. in the General Account to that of the Herd Book Department which amounted to £145 15s. 8d.

The Secretary replied that this was due to books, etc.

Mr. C. B. Blampied asked what was the advertising Account.

Mr. S. A. Candon asked if the printing was done by tender.

To the last question the Secretary said the reports were by tender, and as regards Mr. Blampied's question, the reply was that advertising was the principal item.

In reply to another question the Secretary said Mr. Wardley, the printer of the report, got a commission of 50 per cent.

on the advertisements in the report so that the cost to the Society for printing was not very much.

Mr. Bachmann: Surely the Society should make a profit.

Mr. William Mauger: Shouldn't the full cost of the printing be put on one side of the accounts and the receipts on the other?

The Secretary: Mr. Wardley sent in his account and deducted his commission.

The accounts were then unanimously adopted.

Alteration of Rules

The business of the meeting with regard to certain alterations of rules was then proceeded with.

Capt. McCrea intimated that he desired to withdraw his proposed amendments to Rules 1 and 2, and would bring them up next year. He did this now to prevent a waste of time. This was agreed to nem con.

With regard to proposed alterations to Rule 5.

Mr. P. Martel, Junr., stated that the Guernsey Farmers' Association had had a meeting that evening and resolved that an amendment should be made to the proposal and that seven members of the Society should be "agricultural" members and should not be re-eligible for one year.

The Chairman pointed out that it would be difficult to determine who was an "agricultural" or other member. Who was to decide who was an agricultural member?

Mr. William Mauger supported the last part of the amendment, as he thought it would be desirable to have new blood.

Mr. Martel obtained permission to withdraw the word "agricultural."

Mr. W. H. Foote considered this was an unfortunate alteration at this time. Mr. J. R. Gibbons and Mr. Le Patourel were the retiring members and the former had done a great deal of work in the way of the reforms and revising, and he, the speaker, thought his services should be retained as the work was not yet completed.

Mr. William Mauger said he agreed with the amendment but he also agreed with Mr. Foote that the services of Messrs. Gibbons and Le Patourel should not come into force till 1915.

Mr. Martel, junr., agreed to this being embodied in his amendment and the meeting unanimously agreed by a show of hands.

An amendment to Rule 19 giving powers to the Committee to expel or suspend at their discretion any member imposing on the Committee in exhibits, etc., was also agreed to.

The words "whose decision shall be final" were unanimously added to Rule 22.

Election of Officers

The next business was the election of officers.

Mr. John Carre proposed and Mr. W. H. Foote seconded Mr. Osmond Priaulx as President.

Mr. Priaulx's election was carried by acclamation.

Messrs. J. Carre and W. H. Foote were re-elected, and Mr. A. W. Bell, elected, vice Mr. O. Priaulx, elected President, as Vice-Presidents.

The Committee were elected as follows: St. Peter-Port, Messrs. E. Britten, C. Molesworth, R. G. Agnew, A. Le Patourel, E. T. Wheadon and L. de Putron; St. Sampson's, Messrs. E. H. Ogier and J. R. Gibbons; Vingtaine de l'Epine, Mr. E. P. Mahy, Clos du Valle, Mr. G. A. Ogier; Castel, Messrs. E. de Garis, Jas. Le Page and T. R. Gallienne; St. Saviour's, Messrs. J. Le Page and T. M. Simon; St. Peter's, Messrs. A. E. Brouard and J. W. Tostevin; Torteval, Mr. T. Langlois; Forest, Mr. F. Jehan, St. Martin's, Messrs. J. A. Tostevin, C. R. Blampied and Capt. McCrae; St. Andrew's, Messrs. P. Le Page and P. Martel, senr.

There were several ballots during the election.

Herd Book Council.—The retiring members, Messrs. J. R. Gibbons and Le Patourel were unanimously voted.

Alderney Cattle.

The cattle boom continues. Last week St. Martin's, Guernsey, drew a good draft; this week it is Torteval's turn. We learn that Mr. R. A. Herivel's prize cow, a photograph of which appeared in the "Weekly Press" a fortnight ago, has something to do with these Guernsey visits. Mr. John N. Herivel, cattle dealer, of High-st., has purchased eight head for Torteval. Among these is a fine heifer from Mr. Peter Herivel's High-street farm, of the same pedigree as the prize cow. The cattle now await a steamer for transportation.

—Guernsey Press, Feb. 14, 1914.

The Cattle Trade.

The steamer Alert ran up to Alderney on Tuesday, and returned to Guernsey with twenty-six head of cattle for Guernsey farmers, and consigned to Mr. Langlois, of St. Martin's. This is a boon for Alderney and very satisfactory to local farmers.

At a meeting of the Royal Alderney Agricultural Society held on Monday in the St. Anne's Schoolroom, it was decided that the Secretary be asked to write to the Board of Agriculture and Fisheries, asking for their intervention in the matter of sending cattle to Guernsey on the local Courier. This matter is also being taken in hand by the Guernsey Crown Officers, in order that 21 days, and not 28, be allowed for steamers coming from French ports to Guernsey, to take cattle from Alderney to Guernsey.—Guernsey Weekly Press.

Dinner of the Royal Alderney Agricultural Society

The annual dinner of the Royal Alderney Agricultural Society was served in the spacious dining room of Scott's Hotel on Wednesday. There was a good attendance, about fifty being present. Mr. William Harrison and staff catered excellently. The two visitors of the evening were Captain R. Shearburn, R. E., and Mr. John Gibbons, of Val-es-Portes House, both well-tried friends of the Society of long standing.

In the absence of the President, Mr. N. Le C. Barbenson, who is out of the island, the chair was taken by Capt. Fellows, R. A., Vice-President, who presided with his customary geniality and tact.

After dinner, on the proposition of the chairman, the toast of the King was drunk with musical honours. Other toasts were that of the R. A. A. S., with the Guernsey Herd Book, and the visitor.

Mr. Dan Sebire in proposing the health of Captain Shearburn, alluded to the great interest the gallant officer had always taken in the Society, and to the regret of all present at his impending removal.

Captain Shearburn, in responding, said the eight years spent by him on the island had been among the happiest of himself and family, and they would always keep a warm spot in their hearts for their many Alderney friends.

The musical programme was thoroughly enjoyed. Mr. Dan Sebire's "The Cows are in the Clover" was thoroughly enjoyed, as were the songs of Mr. Birks, "Another glass around," "Our Armonic Club," and "Right before the Missus too." Mr. Whitehead proved himself an acquisition in "Thora" and in "If those Lips could only speak." The duet "Larboard Watch" by Mr. R. C. Le Cocq and Mr. N. W. Gaudion was much appreciated. Captain Shearburn sang with vim "Mandalay," and Captain Fellows brought out his old timers and the Society's favourites, "The Bassoon" and "Paddy stole the rope," with an encore. Mr. D. Le Cocy sane "The Lads in Navy Blue," and Mr. Gibbons' "Midshipmite" was well received. Other songs were to the fore, and on the whole the dinner was one of the most successful of recent years. Much credit is due to both Captain Fellows amd Jurat Gaudion, the Secretary, and to the Committee of Management, for a most enjoyable evening.

GUERNSEYS

The Importation for our

ANNUAL SALE

THURSDAY, MAY 14, 1914

will be headed by

Sailor Boy 2858 P. S.

1st prize R. G. A. S. Whit. 1912; Kings Prize, Aug. 1912;
1st Prize Guernsey Farmers' Show, 1913

SIRE--Billy's Fancy 2205 P. S., 4th Prize R. G. A. S., Mich. 1909.
DAM—Valentine III 7514 P. S., 3d Prize R. G. A. S., Whit. 1913. She has just completed her Island, Advanced Register test with a record of 15,475.87 lbs. milk, 773.04 lbs. fat, 908.28 lbs. butter; and carried a calf during seven months of the test.

We claim for "SAILOR BOY"

1. That he cost more money than any bull previously imported.
2. That he has never been beaten at the Island Shows.
3. That no bull, combining his show ring quality, ever offered at public auction had for dam a cow who produced 15,475.87 lbs. milk, 773.04 lbs. fat, on Advanced Register test.
4. That no bull of his qualifications has ever been imported or sold in this country.

Lisbon Guernsey Breeders' Association

COMPARATIVELY few breeders of Guernsey cattle in the U. S. know of the "Lisbon Guernsey Breeders' Association."

On Sept. 5, 1911, a few of the more enthusiastic admirers of the Guernsey cow held an open meeting in the County Court House at Lisbon, Ohio, After some discussion, we organized what is now known as the "Lisbon Guernsey Breeders' Association," adopting a constitution and By-laws as follows:

"The undersigned members and admirers of Guernsey cattle as a favorite dairy breed unite as an association, the object of which shall be the promotion and encouragement of breeding Guernsey cattle, their advancement, and the discussion of such topics as may be of general merit.

Article I. We organize under the name of the "Lisbon Guernsey Breeders' Association."

Article II. Members of this association shall consist of the charter members thereof, and any breeders or advocates of the Guernsey breed of cattle who may be elected pursuant to the By-Laws.

Article III. Officers shall consist of president, vice president, secretary and treasurer, who, with twelve others hereinafter known as Board of Directors, to be elected at each annual meeting of the association, shall constitute the executive committee, all elections shall be by ballot.

Article IV. The time and place of holding the annual meeting, shall be fixed by the executive committee, and notice sent to all members sixty days in advance.

Article V. A special meeting may be held at any time at the call of the executive committee..

Article VI. Alterations or amendments to the constitution may be made by a two-thirds vote at an annual meeting of the association.

BY-LAWS.

Article I. Order of business.
Roll call.
Reading of minutes of previous meeting.
Nominations and elections.
Report of Committees.
Deferred business.
Communications.
New business.
Discussion of questions.

Article II. Outside of Charter members, applicants must present their applications to the Secretary upon blanks furnished by the association, who will submit it to the executive committee at any time. Three (3) negative votes shall exclude the applicant.

Article III. Five members shall constitute a quorum.

Article IV. The Executive Committee shall transact the preliminary business of the association. They shall provide essayists and other business for the meetings. Three members shall constitute a quorum..

Article V. The day of meeting at the farms of the members shall be arranged between the breeder and the Executive Committee, and notification given all members two weeks in advance.

Article VI. All members shall notify the host within ten days of meeting whether he will be present.

Article VII. The annual membership fee shall be one dollar.

Article VIII. Alterations of, or amendments to, these By-Laws may be made by a majority vote of those present at a regular or special meeting of the association.

CHARTER MEMBERS.

M. R. Baker, Ed. Brinker, T. E. Lodge, Wm. Albright, E. R. Riddle, G. A. Walter, G. F. Mason, E. B. Adams, H. C. McCamon, F. S. Armstrong, Van J. Morris, W. F. Stooksberry, Ralph Adams, E. N. Morris, W. A. Lyder.

The following officers were elected for the ensuing year: M. R. Baker, President; T. E. Lodge, Vice President; H. C. McCamon, Secretary, G. F. Mason, Treasurer.

We then proceeded to purchase a herd bull which was to be selected by a committee and purchased by the association. A service fee of $5.00 was to be paid into the treasury for the maintenance of the herd bull, which was later decided and agreed upon at $100.00 per year.

After quite a bit of inquiry and investigation, the Committee purchased from O. C. Barber the herd bull, bred from a son of Imp. Raymond of the Preel, having for a dam an A. R. daughter of Masher's Sequel. This animal, however, as was agreed upon, was to be the only one owned in common each member purchasing such as he selected, and as many as he chose to.

We have traveled along the Guernsey way until the present time, meeting in some cases obstacles, but, as a whole, we have flourished. We have, of course, lost a few members. Circumstances have changed with some, compelling change of business. However, we have had several applicants, none of which have been encouraged or given an application blank.

At our last Annual Meeting, officers were elected as follows: T. E. Lodge, Pres.; W. F. Stooksbury, Vice Pres.; H. C. McCamon, Sec.; T. E. Brinker, Treas. In addition, the Executive Committee consists of F. S. Armstrong, Elkton; E. B. Adams, Lisbon; M. R. Baker, Lisbon; G. F. Mason, Lisbon; Van J. Morris, Lisbon; G. A. Walter, Lisbon, making a total of ten members.

Our association now owns seventy-three females and eight males.

In addition to the original herd bull, a grandson of Raymond of the Preel and Masher's Sequel, we have two May Rose King bulls, one a grandson of Imp. May Rose King on sire's side; a grandson of Imp. Masher's Sequel on dam's side; another, a grandson of King Bell from a Gov. of the Chene cow.

In fact we are attempting to keep abreast of the times with our selection of sires. We have, of course, some fashionably bred cows and some of the old Connecticut stock that traces back to early importations. In fact, we are not looking for the little pony cow that has some fashionable pedigree without a single speck of dairy individuality. Blest be the time, and it will soon be here, when we will look at the cow first, if she fills the score then look at her pedigree.

It so happens that the writer was once a breeder of Jersey cattle. I found that to be in the boat I should have a large bank account. When I would go to a sale of Jersey cattle I would find there the multi-millionaire, bidding on the little Pony cow and he kept on bidding until he landed her. I had no chance to buy the pretty little thing because he had the long green, I could not pay over $500 and shouldn't have paid over one half of it if I were to get value received. I once saw a gentlemen put the first (and only) bid on a cow of $2500, now I am not sore at him because he did that but I pity him for the blindness, she was the fashionably bred Island cow, the kind the bloods were all looking for and was probably worth $200. Her purchaser went into bankruptcy and that is the road we all will travel unless we get down to

the business part of this proposition. Let us, fellow breeders, wake up to fact that it is a dairy machine we want and not a mirror.

The idea of going absolutely insane over some little Pony cow without one single redeeming dairy feature is absurd to say the least. Get the dairy quality whether she was raised in Guernsey or in some unheard of lonely spot back of the old mill. When you get this kind of type, make selections of sires from producing dams whether Island or American bred. Keep on doing the same thing and you will have a herd of cattle that even Connisseurs haven't dreamed of. We think the Guernsey cow is the basis for just such a herd and we expect to be heard of later in the show ring and at pail with the A. R. records. Keep on with the Guernsey cow. She will win.

H. C. McCamon, Secretary.

FEED RECORD.

Feb. 1913. 12 lbs. grain daily of the following mixture: 3 lbs. bran, 1.5 lbs. each ground oats, Ajax Flakes and D. D. D. Grains, 1 lb. each Homcoline and gluten, .5 lb. cotton-seed meal, 2 lbs. oil meal; 7 lbs. beet pulp, 5 lbs. turnips, 25 lbs. ensilage, 10.5 lbs. alfalfa hay.

Mar. 1913. 11.5 lbs. grain daily of the following mixture: 3 parts each bran and Eagle D. D. D. Grains, 2 parts ground oats, 2.25 parts Homcoline, 1 part Brewers' Grains, 1.5 parts each Aajx Flakes, gluten, and O. P. oil meal, .5 part cotton-seed meal; 6 lbs. beet pulp, 30 lbs. ensilage, 10.5 lbs. alfalfa hay.

April, 1913. Same ration as given in March.

May, 1913. 15 lbs. grain daily of the following mixture: 4.5 parts bran, 2 parts Homcoline, 2.5 parts ground oats, 2.25 parts each Ajax Flakes and Eagle D. D. D. Grains, .5 part each Brewers' Grains and cotton-seed meal, 1 part gluten, 1.5 parts O. P. oil meal; 4.5 lbs. beet pulp, 25 lbs. ensilage, 11 lbs. alfalfa hay.

June 1913. 13.5 lbs. grain daily same ration as given in May with .5 lb. pea meal added daily; 4 lbs. beet pulp, 20 lbs. ensilage, 6 lbs. green alfalfa, 10 lbs. alfalfa hay.

July, 1913. 14.7 lbs. grain daily of the following mixture: 4 lbs. bran, 1.5 lbs. hominy, 2 lbs. each ground oats and D. D. D. Grains, 1 lb. each Union Grains, Ajax Flakes and oil meal, 1.6 lbs. pea meal, .6 lb. gluten; 3 lbs. beet pulp, 20 lbs. ensilage, 11 lbs. alfalfa hay.

Aug. 1913. 16.8 lbs. grain daily of the following mixture: 4 lbs. bran, 3 lbs. each ground oats and oil meal, 2.5 lbs. Ajax Flakes, 1 lb. D. D. D. Grains, 2.1 lbs. pea meal, 1.2 lbs. gluten; 5 lb. syrup, 2 lbs. beet pulp, 30 lbs. roots, 18 lbs. ensilage, 22 lbs. green corn, 12 lbs. alfalfa hay.

Sept. 1913. 16.8 lbs. grain daily of the following mixture: 4 lbs. bran, 2.5 lbs. ground oats, 2 lbs. each D. D. D. Grains, and Ajax Flakes, 1.5 lbs. gluten, 1.8 lbs. pea meal, 3 lbs. oil meal; 2 lbs. beet pulp, 24 lbs. roots, 15 lbs. ensilage, 25 lbs. sweet corn, 11 lbs. ensilage, hay with pasture.

Oct. 1913. 15.5 lbs. grain daily of the following mixture: 3.5 lbs. bran, 1.5 lbs. ground oats, 3 lbs. D. D. D. Grains, 2.5 lbs. Ajax Flakes, 1 lb. each gluten and pea meal, 3 lbs. oil meal; 2 lbs. each beet pulp and roots, .66 pt. molasses, 12 lbs. ensilage, 15 lbs. sweet corn, 2 lbs. clover and 10 lbs. alfalfa hay.

Nov. 1913. 15.3 lbs. grain daily of the following mixture: 4 lbs. bran, 3 lbs. each ground oats and Ajax Flakes, 2 lbs. each Eagle D. D. D. Grains and Brewers' Grains, 1.5 lbs. each gluten and oil meal, .5 lb. pea meal; 3 lbs. beet pulp, 40 lbs. beets, 15 lbs. ensilage, 11.5 lbs. alfalfa hay.

Dec. 1913. 15.6 lbs. grain daily, 14 lbs. of the following mixture: 1 lb. Union Grains and .6 lb. pea meal added: 250 lbs. bran, 50 lbs. each hominy and Buffalo Gluten Feed, 300 lbs. ground oats, 150 lbs. D. D. D. Grains, 100 lbs. each Ajax Flakes, Bartlett's Sugar Malt, cotton-seed meal, and oil meal, 25 lbs. flaxseed meal; 2 lbs. beet pulp, 27 lbs. roots, 15 lbs. ensilage, 11 lbs. alfalfa hay.

Jan. 1914. Same ration as given in December.

Annual Meeting Western Guernsey Breeders' Association

THE fifteenth Annual Meeting of the Western Guernsey Breeders' Association was held in Agricultural Hall, University of Wisconsin, February 6, 1914, Pres. R. W. Rowlands in the chair. Minutes of previous meeting were read and approved. Secretary's report, which was as follows, was read and approved:

Report of the W. G. B. A. for 1914.

No. life members, Feb. 1, 1913	28
No. life members added during the year	1
No. life members, Feb. 6, 1914	29
No. annual members Feb. 1, 1913	95
No. annual members added during year	15
No. annual members Feb. 6, 1914	110
No. dropped during the year	2
Annual members, Feb. 1, 1914	108
Honorary members, Feb. 1, 1913	6
Honorary members added	2
Honorary members, Feb. 1, 1914	8

CHARLES L. HILL, Secretary.

The report of the Treasurer, which was as follows, was read and accepted:

Report of Treasurer of the Western Guernsey Breeders' Association for year ending February 1, 1914.

Balance on hand, Feb. 1, 1913	$291 76
Interest	17 41
Life membership	10 00
Annual dues	60 00
Total receipts	$379 17
Expenditures:	
Postage	$ 8 54
Express	95
Telephone	30
Mrs. H. F. Ora, expense attending annual meeting	6 94
Membership, American Breeders' Association	2 00
Printing and stationery	21 50
Total expenditures	$ 40 23
Balance on hand Feb. 1, 1914	$338 94
Of which permanent fund	$300 00

Respectfully submitted,
CHARLES L. HILL, Treasurer.

The following named persons were elected new members of the Association:

W. A. Lawson, Rosendale, Wis.
David F. Clark & Sons, Poskin Lake, Wis.
George McKerrow, Pewaukee, Wis.
Gavin McKerrow, Pewaukee, Wis.
W. A. McKerrow, University Farm, St. Paul, Minn.
J. Fruit, Waukesha, Wis.
Mathew Brunner, Durand, Wis.
E. W. Berg, Peebles, Wis.
T. W. Ferguson, S. Milwaukee, Wis.
L. P. Martiny, Chippewa Falls, Wis.
R. F. Klemm, Baraboo, Wis.
Edward Tilden, Chicago, Ill.
H. Tillman Hart, Chicago, Ill.
J. K. Blatchford, Chicago, Ill.
Edward C. Ziesel, Cromwell, Ind.
C. W. Stout, Mikana, Wis.
Mrs. Alice R. Gilpatrick, Granville, O.
W. S. Dexter, Kenosha, Wis.
Ralph C. Webster, Columbus, Wis.
L. J. Wendt, Waukesha, Wis.
Geo. Stone, Duluth, Wis.

Invitations for the summer meeting were received from J. R. Bent, Oglesby, Ill., H. W. Griswold, West Salem, Wis., John H. Williams, Waukesha, Wis., and Edward Walter, Walworth, Wis. The question of where to hold the summer meeting and whether more than one should be held was left to the executive committee.

The Secretary reported plans for work for the ensuing year which included giving aid in strengthening the county and local Guernsey Breeders' Associations of the state on which there are now twenty-six at least and two or three more about to be organized. After some discussion, motion was made and carried that we urge the American Guernsey Cattle Club to give the West a larger representation in the executive committee and hold its annual meeting in the West once in two or three years, and they were also asked to give aid, if necessary, in the campaign to extend the influence and usefulness of the local organizations in the middle-west. Mr. Hill, as President of the Club, assured the breeders present that the Club were always willing to aid in any way within their means and power in such work.

The committee on nominations made the following report for officers for 1914 and upon motion, by-laws were suspended and the Secretary was instructed to cast a unanimous ballot for the following officers:

Pres., Edward A. Walter, Walworth, Wis.; Vice-Pres., J. R. Bent, Oglesby, Ill.; Dr. L. A. Wright, Columbus, Wis.; Wm. L. Erbach, Athens, Wis. Secretary and Treasurer, Charles L. Hill, Rosendale, Wis.; Executive Committee, H. W. Griswold, West Salem, Wis.; Wm. J. Heid, Fort Atkinson, Wis.

Mr. Roy H. Beebe of Ashland, Wis., made an address on "The Opportunities for Furthering Guernsey Interests in the North Land." A synopsis of this paper is presented herewith.

Opportunities for Furthering Guernsey Interests in the North Land.

Three great states border on the American shore of Lake Superior. Each in its northern half, is entering upon the constructive period of its agriculture. Almost within the past three years have we witnessed the change from the period of prophecy, the time when we have told each other of the things we might do and the things we ought to do. Now, we are telling the stories of accomplishment, the things we have done.

The early farmers are of the homestead class, the survivors of timber days. Then again, we have the more substantial class of pioneer farmers who were driven to the brush by the panic of '93, To them we owe much. Undirected and isolated they have demonstrated the possibilities of our agriculture, as we know it now. To-day, our new rural population is made up of the men who are making homes in the North. They come from the four corners of the earth. They have all the varieties of tongues and traditions. They bring with them to this great melting pot, all the methods of European agriculture. I believe any of us who have given the subject thought

agree that we are best fitted for live stock farming. We have looked to the southern counties and seen the dairy prosperity and have said to ourselves, "Let us have a share of this dairy wealth, let us get to it quick. If the southern counties have made mistakes, we know how to avoid them. If they have built well, let us profit by their knowledge." So you will find to-day in the north a great movement toward the development of the dairy industry. You will find the hay farmer selling his hay to the cow. You will find little groups of neighbors organizing into groups for the purpose of marketing cream. New creameries, new silos are becoming common.

These pioneer dairy farmers are just now discussing dairy breeds. Many of them have no decided preference. This was shown by a dairy survey taken in the vicinity of Ashland by the Ashland Commercial Club. Many farmers expressed no preference at all. Many expressed a willingness to abide with the decision of the majority of their neighbors, for the sake of community breeding.

If I were to consider the Guernsey cow as an advertising proposition, I would call the time and conditions of this northern domain the greatest opportunity within my knowledge. Perhaps I can illustrate this from an experience which has been close at home. Our greatest immigration is from the peasant class of southeastern Europe, a country which has no dairy traditions. To these people coming North, all cows are black cows or white cows or red cows. Among a people like this, one man observed recently, "a full blooded bull is worth as much as a full blooded professor." They are eager to learn, they are receptive and I know of communities among these people where Guernsey grades are the only milk cattle. It is not an uncommon thing to stumble upon a clover spot in the brush and find a picture to thrill an artist. Some old grandmother just arrived from Europe, dressed in her quaint costume of the old world is guarding a heifer. It is the family pet, protected from the flies by a home made net. And while the heifer browses contentedly, the grandmother gently switches the flies from the heifer's neck and head. This is a Guernsey community, yet one hears spoken a strange dialect of Austria or Hungary.

I do not believe the breeders are aware of the great opportunity for propaganda work in this country. In northern Wisconsin alone, in the twenty-nine counties, we call undeveloped, there are some 25,000 square miles of territory, about five times as large as the state of New Jersey. Any one of nine counties in this Wisconsin territory is as large as Rhode Island. In this area are said to be 8,000,000 acres of wild land with agricultural possibilities. Of the fifteen counties of Upper Michigan and the great counties of Northeastern Minnesota, imagine them as comparing in size with many New England states. In Upper Michigan you have knowledge of the great Jersey and Holstein herds at Sidnaw, Matchwood and Big Bay. Of the Duluth Guernseys, you know as much as I. The influence of these centers is reaching out to the smaller farmers. These northern herds of blooded dairy cattle are stirring the ambition of farmers who until now have had no breed preference.

What would I do to extend the Guernsey breed in the North? I would vixualize the merits of the breed. I would try to reach a people who are not able to read all that is written in English. I would not be satisfied alone to write bulletins and magazine in English. I would do what some of us have already done. Lease a sire to any group of settlers who would take care of him and pay for service. I do not believe in giving anything away. We are leasing sires at profit to The Barksdale Guernsey Cattle Club and the Fish Creek Guernsey Cattle Club. You never heard of these clubs, but every member is a rip roaring Guernsey enthusiast and these clubs will grow in organizations more serious than leasing a bull.

Then again I would put into every pioneer home, into every school house, into every creamery, one of those beautiful colored plates of Dotty Dimple or Glencoe's Bopeep. I would have on the cabin walls of the North, pictures of Guernsey cattle as beautiful as the picture of the cream separator, or the brewery calendar or the blessed saints in red and gold. I would let them have a place by the side of the certificate of baptism and other inspirations to good living.

And last of all, I would encourage the registry of grade cows. I mean I would endorse the work of such men as Craig and Grout of Duluth who are back of this Grade Guernsey Production Registry. These men know the pride and interest and ambition inspired in pioneer communities by the possession of high producing grades. They know the inspiration to better breeding, these records of production have created. This movement centers around Duluth. It is worth while to us because we cannot all own pure breds.

We need more bulls of good repute. Our farmers are asking for them on some plan of lease or loan as is being worked out in Ashland. A good fellow in Ashland has encouraged this idea and done much in this way to make Guernsey breeding centers and Guernsey communities. Mr. Hill gave us a bull and through his influence, a little essay on the grade Guernsey was translated into Slovak and is now widely circulated among people of this dialect. We are going to win out some way and are going to get sires into more communities. Of men like yourselves we ask, don't dump your inferior stock on us. Send it somewhere else. Our people have a sublime faith in your breed. Do not turn their dairy idols to clay. It has taken long, patient work to build this faith and every humble stump farmer with Guernsey inclinations, is hoping some day, to own a registered animal, a real Guernsey as beautiful as the picture of Dolly Dimple.

Prof. L. G. Cole in charge of the Department of Experimental Breeding at the University of Wisconsin, gave a very interesting address on "Some Problems in Breeding."

A special meeting of the Association will be held in Madison on March 12th and a campaign to secure a large membership for the Association, to secure additional members for the American Guernsey Cattle Club, and to plan some aggressive work for the coming year will be taken up.

This meeting was one of the most interesting in the annals of the Association.

CHARLES L. HILL,
Secretary and Treasurer.

Prof. T. L. Haecker of Minnesota will be the speaker at the Guernsey Breeders' Conference, New York, May 12th.

Annual Meeting of the Eastern Guernsey Breeders' Association

THE meeting was called to order at 11.15 a. m., with President Herbert T. Borden in the Chair.

On motion of Mr. Roberts, the roll call was dispensed with.

The Secretary read the minutes of the last annual meeting, and the minutes of the meeting of September 30, 1913, which on motion were ordered to be received and filed.

It was then announced that election of officers would take place, and the following officers were nominated, and on motion the Secretary cast the ballot:

Mr. Lardner Howell, President; H. H. Snavely, First Vice-President; Henry W. Leeds, Second Vice-president; M. M. Hollingsworth, Secretary and Treasurer.

Mr. Isaac Roberts was elected as a member of the Executive Committee.

In the absence of Mr. Howell the First Vice-president, Mr. H. H. Snavely, was invited to take the Chair.

On motion of Mr. Roberts, seconded by Mr. Gill, it was voted to increase the membership limit by twenty-five, making the total seventy-five.

At the request of the Chair, the Secretary read Article II of the Constitution, embracing the rules as to qualifications for membership.

The Secretary read the names of those proposed for membership, as follows: G. H. Cullen, Nathan Lippincott, Samuel H. Harmon, William Lieber, Wallace Armstrong and E. S. Harmer. It was announced that the membership committee accepted these applications and on motion of Mr. Phillips, duly seconded, it was voted to elect the applicants to membership in the association.

Mr. Gill: I would like to nominate the following gentlemen: Milton Campbell, Mulford Company, Philadelphia; A. Clinton Clement, Westville, N. J.; R. F. Whitmer, Franklin Bank Building; Walter E. Wright of Moorestown, N. J., and William M. Moore of Woodstown, N. J., were also nominated.

James Logan Fisher and W. H. Borden were nominated as honorary members.

There being no reports of committees or deferred business, the Secretary proceeded to the reading of communications. Letters were read from E. W. Twaddell and Francis B. Evanson, asking that their resignations be accepted as they were no longer breeders of Guernsey cattle. On motion, the resignations were accepted.

The Chair called for new business.

Mr. Roberts: We have had some difficulty in the past in arranging days and dates for our summer meetings. There is nothing more vital to the interest and life of this Association than those summer meetings, and I think there is nothing that gives greater pleasure to those who attend them, and in order to eliminate some of the trouble, we have had in the past, I would suggest that all of the members who would be willing to have the Association meet at their farms would hand in their names before the meeting breaks up to Mr. Hollingsworth, our Secretary, so that he would have an available list to draw upon.

(It was suggested that the members so disposed hold up their hands, and the Secretary noted their names).

Mr. Roberts moved that a group of members of the Association be allowed, if they desired, to advertise in the Guernsey Breeders' Journal, under the heading of the Association. The motion was seconded by Mr. Gill, and on being put to a viva voce vote, was unanimously carried.

The Secretary announced the award of a cup to the cow most exceeding her requirements in the Advanced Registry for 1913, and stated there should be a committee to award that cup to the proper person and have it engraved. On motion of Mr. Tallman, Mr. Isaac Roberts, Mr. Gill and Mr. Leeds were appointed a committee to award the cup.

It was suggested that Mr. Caldwell confer with Mr. Gill as to the record of the cows entered for the contest.

The Chairman announced that the old membership committee consisted of Mr. E. T. Gill, Dr. Seltzer and E. A. Smith. On motion of the Secretary, it was voted to continue the old committee.

The Chairman then introduced Prof. F. C. Minkler, of the New Jersey Experiment Station, and stated that he would deliver an illustrated lecture on "Type as a Factor in Breeding Producing Guernseys."

ADDRESS OF PROF. F. C. MINKLER.

Type as a Factor in Breeding Producing Guernseys.

Mr. President, and Members of the Eastern Guernsey Breeders' Association: I am a great believer in community spirit. I am a great believer in the organized efforts of a group of farmers or a group of breeders, and it always gives me a great deal of pleasure to be one in attendance at the meetings of the Eastern Guernsey Breeders' Association, because you have such a definite aim, because you have such high ideals, and because you are actually accomplishing things in the breeding world. It is not my disposition to scold, it is not my disposition to find fault, but it does occur to me that a number of Guernsey Breeders, members of this association, are partly responsible for failure on my part to carry out the idea that was suggested by Mr. Roberts and Mr. Phillips and a number of other members, who suggested that I write to a number of breeders, making two requests, first, that they send me a photograph of the highest producing Guernsey in their herd, and second that they send me a photograph of the particular Guernsey in their herd, or that they had bred, or that they considered the most useful animal, from a show yard stand-point. I waited patiently for those photographs to come—they did not come. I jacked some more of the members up, and this is the reply that they gave in some cases: "I have not in my herd animals of phenomenal record. Neither do I have animals in my herd of phenomenal show-yard characteristics. I think you better get them from some other breeder." You know the faithful one, or the man who does things upon request, and among my last efforts I wrote to your Secretary of the American Guernsey Cattle Club. I said, "Mr. Caldwell, I am in a hole. I promised the Eastern Association that I would have these slides prepared and present them. The photographs did not come." So Mr. Caldwell helped me out. I am only saying this not in order to scold the members who did not reply to my request, but to give those members who did comply with my request the benefit of and thanks for what they have done so far.

I might say that the one object I had in mind was to determine if possible, if there was any relation between the type

of a dairy cow that was winning at the pail and the type of the dairy cow or the dairy sire that was winning in the show ring, and while I find more than a few of us who think we know certain things that we study from time to time, know that there was close relationship between the two, I think I can point out perhaps more differences than we might have imagined. Still another suggestion in reference to a number of these photographs. I want at the outset to admit my ignorance, for a number of these photographs came in only two days ago, and I immediately sent them to the photographer and had the plates made, and if I am not absolutely correct in my identification of the animals as they appear on the screen, the breeders will understand the situation and they will do their part, I hope, toward identifying the individual animals.

The first to comply with my request was Pencoyd Farm, and the animal that they represented, as I take it, as a typical show yard type was Jessie of Maple Lane, with a milk record of 12,304 pounds and 595 pounds of butter fat. There is something about Jessie of Maple Lane in her balance, in her symmetry, in her finish and in her color that appeals to me particularly, and I am sure that it appeals to the Guernsey breeders. But I am going to be prefectly frank to-day and give to you my own opinion of some of the weaknesses that I believe exist in Guernsey types, both from a utility standpoint and from a show yard stand-point; and I believe you will take it in the spirit that I wish to give it; and the first suggestion that I want to make is a little bit more attention with reference to the rump. We have a great many high rumped Guernsey cows, and it seems to me that we have been paying a great deal of attention to color, that you have been paying a great deal of attention to production, and now, if you can combine utility with a little more beauty and with a little bit more symmetry, I believe that the Guernsey cow will continue to lead.

The second representative is likewise submitted by Pencoyd Farm. The individual, as I think here identified is Lilac of Pencoyd, with a milk record of 12,674 pounds of milk and 609 pounds of fat; and, if my eyes do not deceive me, we still have a little plainness about the rump. I don't know how serious the Guernsey breeders as a unit consider this defect, but as long as we see it in a great many of the cows exhibited by the breeders themselves, I am going to ask the liberty of pointing it out. It is not a personal matter, it is only a matter of getting the Guernsey breeders together in a question of type. Also, I believe the next question of importance to the Guernsey breeders to consider is the question of origin. Constitutional vigor is absolutely essential for the long distance dairy cow, but we must, in the same time we are developing the digestive system of the cow, pay attention to the milk producing system, the mamary system, and then you must combine those characteristics under a frame.

Quaker Maid of Pencoyd, with a milk record of 10,425 pounds and 537 pounds of fat. I want to commend this individual as evidencing a smoothness about the head and neck, and evidencing perhaps more quality in her general make-up than any of the individuals that we have so far seen on the screen, and while I admire that knife-like line, I do like to see a straighter appearance about the back, and there is an udder that shows the characteristic usefulness.

We cannot appropriately speak of Guernseys from a local standpoint without bringing in the name of two prominent breeders, Mr. E. H. Gill and Mr. J. L. Hope. This photograph was supplied by Mr. Hope, the individual animal being Lady Lesbia, 13,582 pounds of milk and 787 pounds of fat. This individual would appropriately rank as a business cow, perhaps not be considered strictly as a show yard type, but notice that large muscle, that large, vigorous bright eye and that frame that you could not put flesh on if you tried. There is a characteristic distinction between a great many of our animals that are useful at the pail and the animals that are pleasing in their appearance and are admired in the show ring. If we can get together and combine utility with show yard characteristics, I believe we are going to conentrate and unify the aims of the Guernsey breeders; and I commend, and I think all Guernsey breeders and dairymen will commend, an individual dairy cow that shows her usefulness and function as is evidenced by this particular specimen.

Still another viewpoint of the same individual animal. I want you to notice the quality that is evidenced in the rear quarters (particularly the quality of her hind leg) that we see on that dairy cow. We pay some attention in judging horses to the cleanness of limbs and the quality they represent, but I think particularly that there is a shank that would look good on a thoroughbred, and if I would see just one point in any group of animals to determine quality, I think in a horse or cow, I would want to know the construction or fibre or cleanness of the construction of the shank; and then look at the attachment of this particular udder. It is commendable.

Another representative of Florham Farms,—Minuet of Paxtang, 10,218 pounds of milk, 535 pounds of fat. Mr. Hope, at what age was that record made?

Mr. Hope: At three years.

Prof. Minkler: I raise this question: How important or how much importance do the Guernsey breeders here present feel, or how seriously do they object, to the appearance of a shoulder such as is represented by this individual? Must we demand the refined, knife-like withers, or can we tolerate the trifle coarseness and the trifle weakness back of the shoulder that is evidenced here? Shall we put those characteristics of conformation ahead of the idea of production? Because here is an individual that has produced 10,000 pounds of milk as a three year old. Must we distinguish still further between this question of type and this question of utility?

Caprice of Haddon. She has produced to date as a two year old 9,450 pounds of milk and 479 pounds of fat, and in 303 days she has produced 10,828 pounds of milk and 537 pounds of fat, in her re-entry. I believe the statement has been made that certain bulls are sires of sires, and certain other bulls are particularly strong in the female classes, or the calves that they may be responsible for. We have here the development of barrel, the development of udder that we admire. Can we tolerate as much coarseness about the head, or does that heaviness show, as has been suggested, stronger character and more bodily vigor?

Mr. Phillips sent me four or five photographs, and in his letter he stated: "I am sending you the pictures of three daughters of Langwater Royal," and I want you to notice among others things their uniformity. How much attention must a breeder pay to weight and flesh-making characteristics in developing young animals? Is it a suggestion that is worth while, to consider that if a dairy heifer has the beauty and does put on flesh rapidly and willingly, when she is young, that that is an indication of her capacity as a unit for converting food into milk; or must we demand that a heifer show characteristic dairy conformation at the outset? We are fortunate in having on the screen representatives from Mr. Phillip's herd that show in my judgment both of these characteristics. How much attention does the Guernsey breeder demand of this item of refinement, and when do we want these feminine characteristics to show? We say that a breeding sire develops his masculinity in the greatest degree perhaps when he is three years old. He becomes more resolute, perhaps more vigorous, a little bit more masculine in appearance. How long can we wait for a dairy heifer to show these dairy characteristics of refinement, that we demand so often in a show ring, when we award the ribbons to matronly individuals?

(Another picture was thrown on the screen). Could anyone tell that this individual was sired by the same sire? Prepotency, the ability to perpetuate characteristics, regardless of the breeding in many occasions on the female side. Some of the strong points that we like to demand of a dairy sire—and I think Mr. Phillips perhaps is correct in calling the attention of the Guernsey breeders to the similarity of the two animals that are sired in this case by Langwater Royal—and if I remember Mr. Phillips' statement correctly, he stated that this heifer produced as much as 38 pounds.

Mr. Phillips: It was the other one.

Prof. Minkler: Is this the condition that we must have our heifers in at this age? I am asking you these questions and I am going to have you answer them a little bit later on.

(Another picture thrown on the screen). Here again we have just the opposite type,—an animal of correspondingly the same age; and yet here is an animal a little over 2 years of age.

Mr. Phillips: Excuse me, that is the age cow.

Professor Minkler: I beg your pardon. I thought if we could get a development of the dairy characteristics that are evidenced here at the age I supposed her to be, I might be able to bring a contrast. But I want to commend, regardless of her age, certain characteristics that stand out to me. There is a sort of barrel that I admire. There is an udder hung the way it should be hung, close to the end line, perhaps not as large as we might like to see it in certain periods of lactation. There are some things about her disposition that are commend able from every viewpoint, and general quality determines price to a certain extent.

Toma of Hillsted: 13,068 pounds of milk and 554 pounds of butter fat. I want you to notice particularly the depth of the body. Certain cows that seem appropriately built are slim waisted or slender waisted, but personally I prefer in a dairy cow that she get her capacity from depth of body, if it is at all possible, rather than from width of body; and while I like a certain combination of the two, a well sprung rib, I like and admire the depth of body and the condition of the udder that is evidenced in this cow.

A Voice: How much does that cow weigh?

Mr. Phillips: It is guess work,—I suppose she would weigh close to 1200. 96 days, 5,444 pounds of milk, 222 of fat. Re-test last month, another one this month, 77 pounds of fat last month.

Prof. Minkler: I am very glad you brought up that point. I was going to bring it up with the next animal on the screen. I wondered if it would be possible to strike an average of the approximate weight that we might reasonably expect a Guernsey cow to reach at maturity? We see in a great many of our show-rings females of different sizes and vastly different appearances in the same show-ring. Uniformity is fundamentally essential in any class or type and I believe that if the Guernseys in the show-ring are weak in any one characteristic, they are certainly weak in uniformity.

Pride of Gerar: In 42 days produced 1,890 pounds of milk and 76 pounds of butter fat. I wonder what Guernsey breeders think of this particular type? I understand that there is one Guernsey breeder here that admires this sort of type, but must we not demand more refinement, must we not demand more quality and less coarseness from the shoulder forward. But note, if you will, her capacity and her udder development; but if we can add a little bit more beauty with a little bit more refinement, it is my opinion that she would be improved.

(Another picture thrown on the screen). Not only do we have Guernsey breeders in New Jersey, but we have them down in Maryland. Mr. Shoemaker has been so kind as to send up this particular photograph. The specimen if I remember correctly is Glen Masher's Procris, 10,073 pounds of milk and 503 pounds of fat, this record being made at 2 years and 8 months. Is there anything about that frame that we would change? Is there anything in accord with the other specimens that we have seen which might suggest that we should trim that off in one way or another? Take the head, for instance, and getting the sort of refinement that we like—take the development of the mammary system there, and it is what we admire; but is it possible for the Guernsey breeders to improve the rear view of the Guernsey cow? Understand, I am only asking these questions.

Anton's Francis: Owned by Mr. Shoemaker, with a milk record of 12,555 pounds of milk and 696 pounds of fat. Balance in abundance and sweetness in the extreme—constitutional vigor and certainly an appetite, because a cow cannot produce 12,000 pounds of milk without an appetite,—quality at every turn, an animal possessing utility and beauty.

Rumeley's Rose: Also owned by Mr. Shoemaker, with 504 pounds of fat. If you will bear with me just a minute, I want to point out the difference between this type and the type of the indivuals on the screen a few minutes ago,—an altogether different head. Which one do the Guernsey breeders admire most, that appearance about the eye, that large muscle, that lean neck, knife-like wither, capacious barrel; and yet we have a rear view in this case that in my judgment is typical to a certain extent of the kind that we should try to perpetuate possibly; but look at that other. If you could see the rear attachment, do you think it would be commendable? And certainly we must commend the quality of the animals that are represented in these 4 pictures particularly, and in my judgment quality not only determines price, but it is the greatest index of breeding that we have in any class of animals. If you will show me a pig and let me pass on the quality and finish that is evidenced in that individual, I will tell you very frankly and very quickly whether or not that animal is a result of breeding or the mere result of mating.

(Another picture thrown on the screen). I thought possibly that it would not do to keep the Guernsey breeders' mind on Guernseys all the time. Some times people look at one breed of livestock so long and so contently and with so much satisfaction that they look at representatives of the other breeds with suspicion, and often-times with ridicule, and are not willing to give those animals the credit they deserve. Notice particularly the chiseling in that face, the neck, the withers, the top line, the rump. You could not put flesh on her with a blanket,—a very popular type among your Jersey breeders, proportionate in degree with function. I dare say there is a cow with a milk record above 12,000 pounds and she is a cow with evidence that she is going to milk it through an extended period. Is there anything about the Jersey from the stand-point of quality and straightness of line and chiseling that the Guernsey breeders could take advantage of?

(Another picture thrown on the screen). Dairy Maid of Pinehurst: Capacity—and a cow, if I judge correctly with a stupendous appetite—could not even wait for a bite while having her picture taken.

(Another picture thrown on the screen). Some one asked me some time ago if I could get together specimens of the Guernsey cow as well as representatives of the other breeds, showing if there was any similarity between production and type of the different breeds. I will ask you please to draw an imaginary line from this cow's withers down to the brisket, cutting off the fore-quarters; also draw an imaginary line from the hip bone down to the hock, cutting off those two ends, and see what a relatively large proportion of Spotswood Daisy Pearl is barrel and udder. Perhaps she evidences as little hind quarters as you often see in a dairy cow. There is nothing particularly refined about the head, there is an appearance that means business to a certain extent; but how

many, if they would see that cow in the stable would pick her out as an 18,000 pound cow, or one that would produce 957 pounds of butter fat? Would she win in any show ring?

A Voice: That depends on who judges. (Laughter).

Prof. Minkler: Is there a relationship between type, production at the pail, and winning in the show-ring?

I heard some one say one time that Rutila's Daughter was a very prominent breeder and that we owed to Rutila's Daughter a great deal of credit for the Guernsey of the present day. Then I asked myself the question,—is there any relationship between the type of Rutila's Daughter and the type of any other dairy cows in others breeds that have made similar records? And if you will notice particularly the hind quarters, her barrel and her head, I will show to you a representative of one of the other breeds that it is pretty difficult to tell them apart.

Jacoba Irene: Jersey cow, substantially the same type as Rutila's Daughter. The photographer has been skilful perhaps in taking these pictures, but I want to prove to you, if pictures will prove, that there is a similarity in type based upon performance; and if the operator will please put Rutila's Daughter back upon the screen again, I want to again draw your attention to the similarity in these two cows.

(Rutila's Daughter thrown on screen). Could you tell from that photograph that one was a Jersey and one was a Guernsey?

A Voice: Entirely different. (Laughter).

Miranda of Mapleton: We have heard a good deal about long distance cows. I want you to study that head. I have looked at it a great deal. That head and neck means a great deal to me. There is something about the expression that I can see that I cannot tell you,—that she is looking for something to make milk out of. Then I ask myself the question, is there any relationship between a high producing cow of the Guernsey breed and a high producing and famous cow of any other breed; and in looking around, in trying to get an animal resembling Miranda of Mapleton, I thought of Calantha Fourth Johanna. Look at Calantha Fourth Johanna, and bear in mind Miranda, and see if there is anything similar about the head, about the neck, about the triangular or angular appearance, and then compare their records and see if there is anything about this angularity of a diary cow after all?

(Another picture thrown on the screen). I thought that it might be well to point out at this time still another type. Sometimes people in the show-ring bring out Guernseys in high condition, carrying a great deal of flesh. Whether they are trying to imitate a grand champion winner at the show at Chicago I do not know, but if you will get the distinction between the typical beef animal and the typical dairy cow,—you will of course notice the diffierence, and I put this and two or three other specimens of the beef breeds on the screen for the benefit of those breeders who are in my judgment overemphasizing the question of flesh.

(Another picture). Baby Beef. Uniformity is something that Guernsey breeders might profitably copy.

(Another picture). When it comes to quality even the Jerseys do not have it all. If there is any engineer here who can draw straighter lines, as is evidenced here by the back, or in the end line, or in the brisket, he is an artist; and when a breeder can produce an animal that a mechanical man cannot find fault with on account of the angles, it is worthy of recognition. Can you not feel that silky, glossy coat of hair, that loose, pliable skin, that even switch, that clean bone. Notice again, the shortness of the leg, the depth of body and the cleanness of the shank. I would that I could emphasize the importance of this one characteristic quality.

(Another picture). Still another winner of Chicago on the food classes,—a head that shows quality.

We say that the show-yard fixes type. Let us see what they have done. It not only fixes type, but it instills enthusiasm.

(Another picture). Glencoe's Bopeep: A cow that has won twice at the National Dairy Show at Chicago. Her milking record, 13,121.70 pounds milk, 622.21 pounds of fat. Is that the type that the Guernsey breeder is to tie to? Is that the characteristic head we want to see on a Guernsey cow? Does she have enough symmetry, enough smoothness, enough balance, enough refinement? Does she evidence what we call breed character?

(Another picture). Dolly Dimple: A cow that has won at the pail in contrast with one that has won at the show-ring. Are we along the same lines, have we unified the type?

(Another picture). Selma of Pinehurst: Producers of animals perpetuate themselves perhaps not as readily as this particular cow, but there is something about that head that you find emphasized at present in some of our most prolific and pre-potent breeding matrons. And I want to cinch this one point. It is the dairy cow that persistently and insistently produces milk one year after another, and not the cow that makes a big record one year and does not do anything the next year; and I think we might appropriately take off our hats to such a cow as Miranda of Mapleton and Selma of Pinehurst, and animals whose value is based upon what they are able to do at the pail not one year, but year in and year out.

(Another picture). Dolly Bloom: Is there anything about type that governs production? Dolly Bloom is of a certain type. Dolly Dimple is of a certain type. Miranda of Mapleton and the other specimens that I have shown you have certain things in common. Is there any index that we can get at that would guide us? Would Dolly Bloom win in a show-ring?

(Another picture). May Rilma: This is one of the slides that Mr. Caldwell so kindly sent out, and you notice the remark that I take it your Secretary is responsible for, a remarkable producing Guernsey, with 14,764 pounds of milk and 772 pounds of butter fat in 267 days. What is her present record?

Mr. Caldwell: 862 pounds with 66 days to go.

Prof. Minkler: Will she do a thousand pounds?

Mr. Caldwell: 1070.

Prof. Minkler: Is she similar to the popular producing type or the popular show-ring type? Does she suggest still another type that you can appropriately tie to as Guernsey breeders?

(Another picture). Imp Itchen Daisy, 3d: Enough said I imagine on my part. Is that the sort of an udder that Guernsey breeders want? Or do we expect animals to produce sires, and can tolerate perhaps udders a little off type? I think we get it here when giving her credit for the sire that she has produced.

Is there anything about that type that suggests she is a producer of sires, in the extreme sort of a front end that you would like to see, remarkably long body and abundance of quality?

My Lady Baltimore: Still another type of Guernsey that some people are tying to. This is one of the slides as well that Mr. Caldwell sent to me. I don't know anything more about her than is given here. Is there anything about her head and neck that brings to your mind Miranda of Mapleton, Rutila's Daughter, or Colantha 4th's Johanna? Is there anything about that marvelous depth of barrel that we should pattern after? Is there any suspicion of her being high at the rump? Is that an udder possessing as much quality and as firmly carried up to the barrel as you would like to see? Yet she produces 13,000 pounds of milk.

YEOMAN: The type in judging Guernsey bulls, differs from year to year. This was the winner two years ago. Marvelous head and crest and shoulder and back and front end. Still, however objectionable that head may be, from my point of view at least, his breeding is evidenced by appearance and his quality.

HAYES CHERUB: There is the bull that won last year, an English bull if I am correctly informed. Are those two bulls of the same type? Is that as an impressive a fore end as we get in the other case? Does this picture do that bull justice?

GEORGE WASHINGTON OF FAIRFIELD FARM: Does George Washington of Fairfield Farm resemble most characteristically the type of Yeoman or the type of the last bull that was represented? Can we pay as much attention as we would like to pay to that straight line, that straight back? Is there anything in demanding of a bull or demanding of a cow that he or she have straight lines? Is there any relationship between conformation and function?

(Another picture). GLENWOOD GIRL 6th: 72 pounds of milk with a 63-inch udder, and this is the cow that Mr. Gill had in his mind on the Island of Guernsey when he saw the most famous cow on the Island—"My goodness, she looks just like Glenwood Girl the Sixth." Is this the old type of Guernsey or the modern type of Guernsey? Are we clinging to the type that has made the Guernsey popular or are we popularizing a type that appears to be popular? Oh for a barrel like that on all our dairy cows and an udder and refinement and function!

SLIDE OF BULL BENJANIN: Is this an old type or a modern type of bull?

He is one of the great sires, but I think in all fairness to Mr. Hill he has a perfect right to say what there is about Benjamin that impressed him while he owned him other than his performance? Is there anything in his conformation or in his type or the type that he perpetuated,that is significant?

Mr. Hill: I don't know that there is anything. He had one thing that I remember,—he had the most marvelous handling qualities of any bull that I had anything to do with.

Prof. Minkler: Is there not something about his expression and his masculinity and his vigor that indicates prepotency?

Mr. Hill: He was about 10 years old when that picture was taken.

Prof. Minkler: Age was kind to him. Let me make this significant statement. I believe that the greatest injury to the dairy industry from a breeding standpoint to-day is the slaughter of bulls and selling them at 3 cents a pound, when they are worth a hundred dollars a pound. (Applause). A man buys a bull calf because he can take care of him more easily than he can an old bull, and yet here is an old, faithful bull. You may have him in your herd, he is worth a hundred dollars a pound, and yet you sell him for 3 cents a pound. If we could get back to that fundamental basis of experience and the use of tested sires, and if this organization could sound an appeal against the slaughter of these useful and tried bulls, against the extensive use of our young bulls untried, I believe that they would accomplish a great deal toward the development and upbuilding of our dairy industry. Let us not send the old bulls to the shambles. Let us put them in grade Guernsey herds or grade herds; because if they are useful in a grade herd, then they are safe to try in a better bred herd; I heard just a few days ago this statement by one of the prominent breeders—"We had a grand old bull, but I did not like him. I say he is grand now because his daughters are coming along and we did not think he was so grand at the time we used him." Men, we must keep these old sires in service.

GOVERNOR OF THE CHENE: A little girl near the stable brought him out and held him, and I wish I could give you a picture of Mr. Gill looking at the Governor.

IMP. KING OF THE MAY: What has made King of the May famous? Is it his conformation? Is it his conformation or his performance? Some one suggests both.

IMP. MASHER'S SEQUEL: Is there any relation between the type of bull that they are using extensively on the Island and the type they are using here? I say this again, if we could prove this and not experiment on our herds, we would get valuable results. This bull question with me is an important one.

(Another picture thrown on the screen, representing a bull attached to a cart, entitled, "Tractability of the Guernsey".—If an old bull cannot do anything else, he can do this. Does he remind you of any bull, does he remind you of his sire, Glenwood's Maind-stay? If the old bull on your farm is not worth anything else but to cart around materials of this sort, he can earn his feed. Do not send him to the shambles.

(Another picture). We take up here a very important item with reference to udders of Guernseys. I am not going to be personal in my remarks, I am going to be general, but I am going to prove to you what a high standard at the showring means or give you an impression that the high standard at the show-ring, has a right and does good. Does this not represent a typical udder? It shows a most marvelous mammary vein. And this old cow, that we had in the station herd, lost three-quarters of her udder, but she produced 50 pounds of milk out of one teat.

(Another picture). How much attention can be paid to the development of fore udder and the development of hind udder, when we get them on the same cow? And then is it important that we pay attention to the levelness and the balancement of the teat? A straight end line in this case and a straight top line with a bulging udder gives you the appearance, and yet you ask yourself the question, is that bred there or is it hand made?

(Picture of a Holstein cow). Grand Champion at the National Dairy Show of 1913. Is it on account of her udder that she won? Is that the kind of an udder we would like to see?

(Another picture). Study the udders please for a minute or two.

(Another picture). The first cow to give 40 pounds of butter in 7 days. I don't know what she did in the other 340. I cannot recall her name,—she was one of the first to make one of those remarkably high records.

(Several other pictures were shown, while Prof. Minkler drew particular attention to the udders and the rumps).

MAY RISE IN HER SEVENTEENTY YEAR: I wanted to try and let you people imagine that you were at a show and looking for two things, udders and well developed hind quarters. Is there anything to the critism that has been made that the Guernsey breeders are not paying as much attention to the development of udder and hind quarters as they should? You all know May Rose. I think that picture, as stated there, was taken in her 17th year. It is the long-lived cow that is the useful cow. There is the type we must tie to.

IMP. HAYES ROSIE: You must go away with that sort of an impression in your minds,—chiseled in every point, quality at every angle, balance from every viewpoint, performance, show record, milk record,—a combination of beauty and utility in the points of a dairy cow.

LADY EMILY FOLEY: I take it from the date, 1884, when it was taken, that this was one of the very old cows. Am I right in stating she was one of the first cows to sell at that price, $1900?

Mr. Caldwell: Held the record at auction for a number of years.

Prof. Minkler: I ask what the record price for a Guernsey cow is at the present time, at public auction?

A Voice: $2600.

(Another picture). This cow was owned by one of your prominent members, and this cow has produced in four consecutive years 51,098 pounds of milk. Her name is Francis Milkmaid, owned by Mr. Shoemaker,—11,783, 11,725 again, 12,311 and 15,277. Does she belong to the old school or to the new school?

(Another picture). GLENWOOD GIRL: To give honor to whom honor is due, I wanted you to go away with the impression on your mind of a Guernsey of this type. What I have tried to say and what I have tried to show, is this, that there seems to be a variation in the type of the animals that win at the pail and the type of the animals that win in the show-ring. There seems to be a well founded criticism that the rear end of the Guernsey needs attention, in order that we may get a little more beauty in its setting and a little more symmetry of udder. And my final word is this: Do not sell useful bulls at 3 cents a pound. I thank you.

(The Chairman invited Mr. Hill to address the meeting).

Mr. Hill: I am sure I do not know what I can say. I have enjoyed listening very, very much to Mr. Minkler. He has been criticising us and I am going to start in by criticising him. Mr. Shoemaker and I were enjoying his talk very much, and when he got through Mr. Shoemaker said, "He did not say a single word about the color of a Guernsey cow," and he said, "I am going to roast him for it." Now Mr. Shoemaker may not get a chance and I do not mean to steal his thunder, but I will pass it on to him right way.

Prof. Minkler: I will refer you to the notes on color.

Mr. Hill: The other day, looking over the old scrap book and so forth, I came upon the record of Mr. Hope's herd, about 1894 or 1895, published in Hoard's Dairyman; and the Governor—all honor to his name—or whoever wrote that, (more likely Mr. Burchard) said, "We are very glad indeed the day has arrived when people are publishing record of Guernsey cows and they are not talking about the color of the milk they got." I want to go on record every time I have the opportunity of addressing any Guernsey breeders this year or any other year, in honor of particularly Mr. Codman, whom we all delight to honor for the time and effort that he has made not only in his own herd but every time he had an opportunity to speak to any of us, as you know by experience or ought to know, he would somehow or another talk about color.

Mr. Minkler was talking about the show type of the Guernsey cow as a commercial proposition, and it is a commercial proposition. Mr. Marsh has been mentioning—I have been with him three or four days—and about once an hour he would say, "Charlie, there is no use talking, they not only want records, but they want conformation with it and when you get it they will pay any price you want to ask." While that is true, I want to say just a word about this color proposition. When you increase the number of things you try for, by geometrical progression they become hard to get. If we have not anything else but symmetry and production, they can get that in some other breeds, as well as ours (not as well perhaps) but they cannot get this product in the color it gets from the Guernsey cow. I was reading the other day in the report published by your Guernsey Breeders' Association,—the old association here in Pennsylvania and New Jersey—and how many times in those early days were references made to the color of the milk of the Guernsey cow. It was what, without any question, started more parties in business in Philadelphia and has been the basis of it all these years gone by, and it is what is making the Guernsey cow notable in Waterloo, Iowa, or some town in Michigan or Oklahoma or Maine,—wherever you hear about some man who started in the milk business in town and tried to put all the other fellows out of business in about two weeks time. The remark was made that—it was not a remark either, it was something I saw in print yesterday—about the rich milk that came from a cow, the whole impression came because the milk was yellow. The very first Guernsey Mr. Marsh owned, he got at the National Dairy Show, where an auction was in progress. There was a three-year old cow owned by Mr. Taylor of Rhode Island being sold at the time he passed the auction block. He stopped and put in a bid and they said, "It is your cow." He ordered it shipped to Iowa and forgot all about it until she got there. He then put her in the hands of a gardener who would take care of the cow and supply them some milk for their own table; and in about 3 or 4 days they announced, both the gardener and also another man that Mr. Marsh had in his office to keep him posted about things, that they had a perfectly wonderful cow, there never was a cow that gave such rich milk as that. But that same impression prevails as I say in towns all over the United States where the Guernsey milk comes into comparison with other milk. We are prohibited by law to color milk. We can color butter, and we cannot talk about that, but when that is prohibited, white butter will be in fashion, and we won't be there. But as long as there is demand for milk and cream, there is going to be a premium on Guernsey milk, and I don't want any of us to lose sight of that fact, and lose this pigment that is inherent in the breed. If you would go into the market on the Island of Guernsey, and I could tell you the herds right now, I was thinking about it when some remarks of Mr. Phillips were made of being on the Island, and some breeders there have been talking to doing something else with their product rather than offer it for sale in one of their markets, because it lacked color in comparison with their neighbors' product. They have had to send their butter to England or some where else in place of selling that product where it is placed in the window and every man's name on the butter, and they know who made it. It is a commercial proposition that will be of value in the years to come, and we must not lose sight of it.

I was impressed as the Professor was showing those pictures and as we were looking at them, with the point that he brought out of the very great lack of uniformity that there is in the animals of the breed. It is not perhaps truthfully illustrated by the pictures shown of the animals. For instance, you commented on the difference between Yeoman and Hayes Cherub, as the two bulls that had led at two National Dairy Shows. There scarcely ever was a better show bull than Yeoman, but in commenting on the difference between those two bulls in the pictures, he said, "Is it a good picture?" and of course we can answer, those who have seen him, that it is not a good picture, but remember in the case of that particular animal that he was only three years old. Contrast that with the picture of Benjamin, nine years old, contrast them with the two animals of Mr. Phillips that were shown. You started to speak of an old cow as a heifer, then you brought up the question as to whether our heifers should look like Mr. Phillips' heifers, or be half as fleshy as that; but that is a very, very pertinent question, and I am glad that the professor asked it and I was very much impressed in visiting a herd this week in seeing how they are impressed with the fact that heifers cannot get too big at the time they drop their first calves. They are feeding their heifers there, nothing but alfalfa and ensilage, up to the time they get three or four months in calf, and they are removed from the heifer barn to where they are later to be cows.

One or two points of interest from that herd out there I want to bring to you as news items. You saw by the February journal that Jehanna Chene had beaten Dairymaid of Pinehurst by a couple of pounds. They carried her along in January, and she has increased that lead. If I understand

aright, this is her first calf, but as you stood in the barn and looked and looked at her, you saw not only a wonderful producer, but one of the most enormous cows that the breed has yet produced. One of the most beautiful things was to see the man who tended her—two stalls away he had petted Spotswood Daisy Pearl and Jehanna Chene was at once jealous. He said, "What is the matter? You come over too." And that cow tried to climb that box stall and come over where that man was. I saw him go three times in that stall and kiss that cow, and if you had seen that cow snuggle up to him, you would say it was something else besides grain that made records. As to Spotswood Daisy Pearl there was a great deal of talk about her breeding propensities being ruined by the record, and it was a fact that Spotswood Daisy Pearl did not get any calf for a long while, but you will be glad to know that she did last June, and there is every prospect that she will re-enter with over 900 pounds of butter fat this year and drop calves ten and a half months apart.

One other fact that particularly impressed me out there and that is worth our making note of, and that is that the bull known as Governor First of the Chene, that was sold to Mr. John C. Higgins of Delaware City, when I purchased the herd for Mr. Barber several years ago, that bull was there, and we took him along with twenty-two of his daughters, and the bull proved impotent, he never sired another calf.

Pre-potent sires are showing up all the time. They have been ever since I knew anything about Guernseys. So many people have said, "I know I have got the bull, I just know that heifer is perfectly marvelous." I have in mind two bulls used in one herd. In both instances the owner was just so sure he got the bull that he was seeking for, and it proved that he didn't have anything.

At least three experiment stations have gone to work at this time to study the question of the pre-potency of the dairy bull. At three stations they have got two men at work on it, doing nothing else. They are studying prepotency in other lines, and in poultry perhaps they can study it more quickly, but the idea in mind is to see if we can determine in some way or other what constitutes prepotency in a dairy bull. We don't know now, there is no question about that; but we can keep the old bull until we do know. In my town, three Guernsey bulls have gone to the shambles at three cents when there are five breeders that would help those men sell their bulls if they would only let them know. Perhaps in one of those three herds I will hear one of the owners say, "I have got the most marvelous bunch of cows from that bull that I sold for three cents a pound." The very best work that the professor said was, "Do not do it, they are worth one hundred cents a pound."

Prof. Minkler: Will you let me have just one word. I want to tell Mr. Hill and Mr. Shoemaker this one point, that the color of the milk is of far more importance than the color of the nose. (Applause.) Keep up the reputation of the Guernsey from a standpoint of color, I admire that, and the thing to do as I see it to-day, is to get a little bit more uniformity in its conformation.

(The Chairman invited Mr. Scoville to address the meeting.)

Mr. Scoville: I am always very much interested during these discussions about type. It seems to me there is no one thing that we need to study any more than this question of type, and I have for a long while felt that we were exposed to a peculiar danger in this connection from the fact that we have placed so much emphasis on our Advanced Register work. As I have so repeatedly said when people come to the farm and spend more time in the office looking at the photographs and records than they do in the stable looking at the animals, they are almost sure to make a bad buy. We cannot lay too much emphasis on that tendency, which is so easy or so apparent for a lot of people, to let the printed matter tell the story. They think if they can get the lines and if the advance record is satisfactory that there is the dam or the sire that they want. That is because that thing that we call animal sense comes to people generally only after a considerable effort and many of us unfortunately never acquire it, but there is no question that you cannot breed unless you get that. That is what I understand Prof. Minkler to mean when he talks about breeding for symmetry, breeding for something that will be of true type, that will fill your eye, be beautiful as well as useful, and if you go around the country and see the big performers you cannot escape the conclusion that it is absolutely necessary for us to keep pounding away at this question of type in order that we shall not split up into as many different types of animals as there are females. Professor Minkler says he would not work for uniformity—this is just to show the complication on the question—and then he tells us that we need not work for uniformity in the matter of the color of the nose. In other words, black noses are of no importance, although it is part of the uniformity scheme. You cannot go to one extreme or another, but fight for a middle ground, maximum amount of beauty with the maximum amount of utility.

The President: We should like to hear from our Secretary, Mr. Caldwell.

Mr. Caldwell: Mr. President and Members of the Association: I am indeed glad to be here with you to-day to meet you all again. I think possibly my proper sphere would be more in talking about the uniformity of records than it would uniformity of the cow, at least from my daily experience, but I could not help thinking while Prof. Minkler was showing up these pictures of two things. One is that it is a blessing that we are finding out that so many of our large producers are pretty well scattered in the breed and are cropping out where we possibly have least expected them. Is not that an encouragement, that there is a great deal in the foundation of the Guernsey upon which we can expect to build? The other was a remark that one of our very prominent breeders made, that he was very, very glad he had taken up the breeding of Guernseys, for he did not believe any other breed of cattle gave such a field to work in as he had in the Guernsey. It was all before him, and with the foundation that the breed was showing in her capabilities, he had his field for work, to bring forward and possibly bring together this beauty and utility.

I suppose we must have an ideal in life to work for, an ideal with the Guernseys, and this much debated question of the black nose or the cream colored nose, remember, it gets but a very small point in the ideal that we have held up, and when we find a cow that is scoring 100, or when we have reached that ideal, let us try to lift that ideal up just a little bit higher.

It is certainly gratifying to see the work that this Association is doing. The other day I was thinking over how the Guernsey breeders are associating themselves together for the forward movement of the breed. Last week, out of about ninety breeders in our little Rock-bound State of New Hampshire, we succeeded in getting nineteen together to form the New Hampshire State Guernsey Breeders' Association. There is a Maine, New Hampshire, Massachusetts, Connecticut, New York, two here in Pennsylvania, Ohio, Indiana, Illinois, Iowa, Wisconsin, Michigan, Minnesota, I believe—Minnesota, if it is not organized, it is taking steps towards bringing forward the organization—and the Southwestern Guernsey Association. Let us have the good work go on and put the Guernsey where she belongs.

(The report of Treasurer Hollingsworth was read and Mr. Tyler and Mr. Shenk were appointed by the Chair to act as an Auditing Committee.)

Mr. Gill: I remember a remark Governor Hoard made at the National Dairy Show some years ago. He said, "I am sorry to see the Guernsey producing cow go one way and the Guernsey show cow go another way," and that might add to the complications we have had presented here, in our determining on an ideal Guernsey cow, because we all know that as we add a characteristic, as was suggested by our President, we add a difficulty, but I believe the suggestons that have been made at this meeting will be helpful to us in our Guernsey breeding work.

Upon motion duly seconded, it was voted that the Association be authorized to buy another cup for next year on the same terms.

The committee having the matter in charge recommended that Mr. Hollingsworth's compensation be increased from $25 to $50. Mr. Hollingsworth stated that his salary has heretofore been nothing, but that he thought $50 was too large. A motion, however, was made that the Association adopt the committee's recommendation fixing the salary of Mr. Hollingsworth at $50, and upon being seconded was duly carried.

The new president of the association, Mr. Lardner Howell, was presented to the Association.

Mr. Howell: I appreciate this honor very much. It is a great day in my life to be President of the Eastern Guernsey Breeders' Association. I received the very best impressions from the members of the Association. It is a useful association and I feel that we want to, if we can, continue the great good it is doing. I know when I first started in, not one of the men that I was thrown with wanted to take advantage of me, and that made me very loyal to the members of the Association and the good that they are trying to do, and I wish to again repeat, I appreciate very much the honor of being your President.

Mr. Phillips: I feel that we have enjoyed this meeting very much. We have enjoyed having visitors, and above everything have profited by the talk that Prof. Minkler has given us. He has gone to no little trouble in preparing this address, and I think about as little as we can do is to give the Professor a rising vote of thanks.

(The members of the Association rose to signify their thanks to Prof. Minkler.)

Prof. Minkler: Mr. President, I assure you I appreciate the courtesy that has been extended to me.

After Luncheon.

Mr. F. G. Benham: I do not think I can say too much for the Guernsey cow. There is no question but that what we have beaten all the other dairy cows on quality and on color, and it is my opinion that we do not want to get away from color and production. A cow that will produce 500 pounds of butter fat and 10,000 pounds of milk looks awfully pretty to the average farmer, no matter if her back lines are not just exactly right, and the average farmer, as well as the average business man, is watching the returns. That is what we all seem to be pulling for, for legitimate returns for the labor and money invested, and I do not think we want to get away from the production and quality proposition. When we get that, then I think we can take up the show line part of it, but I think that the quality of the milk and the economic returns are the very strong points in the Guernsey breed. I am very glad indeed to be with you, I am glad to congratulate you on having the best Guernsey cow in the world, the best cow of any breed in your state.

(The President then invited Professor Hayward to address the Association.)

Prof. Harry Hayward: I purposely chose the seat near the foot of the table in the hope that I would escape, and yet here I stand. I have been very much impressed with what Mr. Benham has said about the quality of the milk and the color of the milk of the Guernsey cow. Much has been said about the conformation of the Guernsey cow, but it strikes me there are always going to be two lines of effort in the breeding of Guernseys. I know of men, wealthy men, who are looking for satisfaction and get their fun, their recreation, their diversion, in breeding Guernsey cattle. Those men avoid showing purposely, they do not want to take their cow into the show ring. There is no fun for them in competing with other breeders in the show ring, and I appreciate that point of view. They do get a lot of fun, they do a whole lot for the breed by keeping that cow at home and running her for A. R. work, and in that way try to compete with their fellow breeders. For those men it does not make any particular difference whether the cow has her black nose or whether she is down in the back, so long as she is producing the milk and the butter fat, they are perfectly satisfied, and it seems to me that that type of man and that class of men should be encouraged in their work, just as much as the man who goes in the show ring. I do not believe we can ever get uniformity in the show ring, because it is difficult, if not impossible, to get judges whose ideas or ideals are the same, We can never hope for uniformity. To bring it down to a practical basis, how many of you men would follow the ideals laid down by more than one or two judges in the whole country, and you know how heterogeneous the judges even of our large fairs are even in this country, and how can we follow any type laid down that way? If the thing was to go to a vote would the most of you be inclined to think you were breeding from a family or individuals that were making better milk records? As Mr. Benham says, the cow that will make 500 pounds of fat and 10,000 pounds of milk in a year, looks awfully good to a farmer. It looks awfully good to those men who are not, strictly speaking farmers, those men who are farming for the pleasure they get out of it, and it seems to me it is a question we have to settle individually for ourselves, whether we shall go in for the one line or into the other because it is not possible—I do not believe it is possible at least—that we shall have the show animal or the animal that attracts the greatest number of judges, at the same time break the records for milk and butter production.

(The President called on Prof. Bishop of National Farm School.)

Prof. Bishop: There is just the one thought that has come into my mind while we have been talking about types and production. I wonder whether we should find eventually that there will be a certain type come about in connection with these high producing cows? There are not, I think, a great many families in which we shall find high producers. My belief is that all breeders recognize the fact that they are dependent upon a very, very few animals for the building up of high producing herds or high producing families. Is it possible that, as we develop more and more of these high producing animals, we shall find they will be limited to a certain number of families, those families are generally very few, and in connection we shall find a certain type going with them to which we adjust ourselves. We recognize that in some cases the Guernseys do not have quite the type of fore udder we see in some of the other breeds, but at the same time, we recognize the fact that the Guernsey production stands high. Then the main question arises, is it necessary that we shall have just that type of udder which is connected with some of the other breeds, in the Guernsey, or even if we find that udder is a little bit sloping in front, we have a different type to

adjust, high producing type, and after all what we are looking for is the animal that will produce the most money at the end of the year.

The President: We are honored in having in our membership Miss M. M. Vaux, who has a very valuable herd, and we would like to call on Miss Vaux. (Applause.)

Miss Vaux: I think it is rather an unfair advantage to take to make me talk to-day, as I do not know that I am such an expert on the subject of Guernseys, but, if there is one thing that I have had success with in connection with Guernseys, it is in the highly colored product and the richness of the product. I was speaking to one of the gentlemen here to-day about an occurrence that happened soon after we started our Guernseys at Bryn Mawr. My man was stopped in the road one day by an inspector of our county who wanted to know if he understood the penalties that were imposed for coloring milk, and said he could not understand why we had colored the milk the way we had, and wanted us to understand if we were not going straight with the milk, we were sure to get caught. Of course, I am told that some of our competitors in the neighborhood say that if it had not been for us they would not have to try and endeavor to bring up the color of their milk, because we have set the standard on that main line for all the milk, and all these other people who raise Ayreshires are feeling our competition. Be that as it may, we have a waiting list for everything we have to sell, and in one line particularly, sick babies, if there is any baby that is not doing well, sooner or later, we get that baby to feed on Guernsey milk. They may tell you a lot about milk not being well for babies, but we can show you a whole lot of babies that would have died if it had not been for our Guernsey milk. I have about seventy Guernseys at the present time. We are getting lots of heifers, about two-thirds heifers and one-third bulls, and they are all pretty much of the same type and they are all doing very well. Of course, ours are all thoroughbreds, and I do not care about mixing up. I have fault to find with some of our friends who will mix up sometimes and get a black and white cow, and want to know why I do not increase the herd and why I cannot take on more customers. I have sometimes asked them what they expected me to do. I do not know of any other method to increase the supply but to have a real good pump, but they did not seem to think that answered their requirements. We do not make certified milk at all. Our custom comes from the people in the neighborhood who are at liberty to come and see the way we do it. We do not keep the bacteria down to a certain amount. In fact, I am told it is a bad thing not to have some bacteria, because the children's digestive apparatus becomes atrophied, and if they then happen to take milk with bacteria, they are pretty sure to get sick; so the consequence is it is a better thing to have a few bacteria. (Laughter and applause.) The consequence is we keep our bacteria down below 10,000, and we wash our bottles, scald them and scrub them with hot water. Unfortunately, we have never had money enough to put in an up-to-date plant for bottling and sterilizing. That we hope to have some day. The people come from all around the neighborhood to see the cattle and to see the way we arrange it.

There is a funny thing that happened to a woman, who insisted that she could not do with the food for her baby unless she had it from a certain cow and unless it was delivered twice a day, both morning and night. It was impossible for the morning's milk to be suitable for the baby at night, she must have afternoon's milk, and we told her that we could not afford to deliver one quart milk in the morning and one quart in the afternoon, and so she said she would send her colored man a mile over to the farm in the afternoon for the milk. The first day she came herself. She had a black muff as big as this (indicating her muff) with long black hair. Inside the muff she had the bottle, an opened bottle that she carried over in the muff herself to be filled with milk to be carried back to the baby. The baby thrived all right on the milk, but she sent the colored man over. I don't know how they cleaned the bottle, or how they sterilized it, but fortunately the baby was not hurt with the germs he got in it.

I don't know that there is anything else I have to say to-day. We have lots of funny experiences. Another baby we have had. About one Sunday a year ago we started serving, Sunday morning, and after the milk had gone up early in the morning it was brought back to the farm at 10 o'clock, the parents of the child coming back in a big automobile with this lone bottle of milk and they said there was no cream lying on the milk, they were not able to see anything. They supposed it had cream in it, but the nurse said there was no cream on the milk for it had not risen. We asked if the child was not thriving, and she said it was perfectly well, and our man said, "If you keep on driving around the country with that bottle of milk, there never will be cream rising on it." She did not really know that you had to keep milk still in order to have the cream rise on it.

The President then invited Mr. V. E. Fuller to address the Association.

Mr. Fuller: I did not know that I would be called upon. I listened with a great deal of interest to remarks made about the Guernsey cow, some claiming that she has some defects, and I am sorry to say she has, but I do not think the people are giving credit for the wonderful progress that has been made in the improvement and outward conformation of the Guernsey cow in the last three or four years. I do not believe that there is any particular breed, so far as outward conformation is concerned, comparable in its progress, with the progress that has been made in the Guernsey. One point has not been touched upon by any, as it appears to me. It seems to me it is one of the weakest features of your breed, and that is a lack of uniformity in the type and power of transmission. You do not compare in that respect either with the Jersey or with the Ayreshire. The Holstein and the Guernsey, according to what I have seen, are lacking in uniformity, and I believe you will have to put up with a certain amount of inbreeding before you will be able to transmit that uniformity of type which is desirable in any breed of cattle. I understand you will have, or practically have now, the champion cow of any breed, both in butter fat and in butter. I was particularly delighted to notice the stress that was laid by many of the speakers upon color of skin—because that is one of the great characteristics of your breed, this one, leads to the improvement of the breed. I am sorry to see it is often disregarded by judges in the show ring. I have seen judges go clean through large numbers of cattle, stood by their side, watched them, and I have never seen them look to see the color of the eye, the type of the eye, in fact, looked to any color, and I have gone afterward and looked some of the animals over that were placed first, and where there was very little discrepancy as to quality between two, and the order ought to have been reversed if the true characteristics of the breed had been considered. That is in my opinion one of the strongest features, and I do not think that you can afford in any way to disregard that characteristic. I believe on the contrary, that such association as this ought to try and impress upon their breeders the necessity of maintaining that one characteristic which is possessed by your breed and by your breed only, or possessed by no other breed. I think as far as that is concerned that if you even step on the foot of the judging powers, you should insist on this; and I think that one reason for that is that we have too many professional judges and too few practical judges. (Applause.)

(Continued on Page 49)

Guernsey Sale at West Salem, La Crosse Co., Wisconsin

On Friday, March 20, Messrs. C. D. Griswold, H. W. Griswold, A. R. Lewis and A. I. Stubbs of West Salem, Wis., offered at Public Sale 65 Registered Guernseys, who brought a total of $18,525 with an average of $285 per head. Buyers were present from the states of Illinois, Michigan, Minnesota and Pennsylvania.

The highest prices paid were for Bonite of Fairview 22776 and Imp. Polly 33069, who sold for $600 each.

Following is a list of animals and buyers.

Princess of Chestnut St. 25057, W. A. Franklin, Town, Hill, Pa. $290.00
Imp. Little Nell of Q. V. 23229, Theo. Werder, Ashland, Wis. 220.00
Moss Rose of Bellview 42893, Albert Lueders, Reedsburg, Wis. 185.00
McLean's Little Gem 25648, Theo. Werder, Ashland, Wis. 170.00
Maud's Yellow Bessie 32512, S. L. Dudley, West Salem, Wis. 205.00
King Bell 4th 22279, Orin Fletcher, Bangor, Wis. 225.00
Miss Lenfestey 39691, Karl Byington, Merrill, Wis. 260.00
Novine II 34175, Fred Patterson, Harrisburg, Ill. 250.00
Belle Duchess 27313, Theo. Werder, Ashland, Wis. 305.00
Jessie Fulton 33823, Peter Hiam, Ferryville, Wis. 235.00
Holden's Monogram 26459, J. M. Halderson, Holmen, Wis. 260.00
Belle of Willowdale 37253, Tom Kilen Westby, Wis. 310.00
Fanny Masher 42973, Theo. Werder, Ashland, Wis. 305.00
Naomo Bell 42979, Ben Bell, Camp Douglas, Wis. 230.00
Lady Mar of Arwood 33414
Jewel's Dame of Fairview 40876, Mr. Pritchett, River Falls, Wis. 300.00
Wilton Lad 16651, John Knudson, West Salem, Wis. 185.00
Sheila of Snowdoun 25228, Lynn Hurst Farm, Hillsboro, Wis. 335.00
Pride of Hoosac 29733, Fred Patterson, Harrisburg, Ill. 240.00
Glenola's Nellie 37620, Wm. Ziegler, Norwalk, Wis. 205.00
Nina II's Golden Queen 40536, Theo. Werder, Ashland, Wis. 205.00
Katonah's Sunbeam 33433, H. W. Whitehead, Rockland, Wis. 235.00
Dean of Hillhurst, 34433, O. W. Lehmann, Chicago, Ill. 310.00
Maisie of Valley View 42209, O. S. Goodwin, Battle Creek, Mich. 275.00
Katie's Princess Alex 24759, Adolf Nuttlemann, West Salem, Wis. 255.00
Katonah's Polly 33435, R. F. Wilson, Wasau, Wis. 265.00
Bell Hopeful III 32980, Orrin Fletcher, Bangor, Wis. 305.00
Naomi of Harriton 26169, O. W. Lehmann, Chicago Illinois. 275.00
Imp. Lady of Vaux Belets 39643, M. J. Humphrey, Bangor, Wis. 255.00
Eastern Maid 20787, George H. Silverwood, Edgerton, Wis. 165.00
Billy France's Honeymoon 32491, C. W. Lehmann, Chicago, Ill. 425.00
Lady Bella of Katonah 23927, Clifford Capener, Baraboo, Wis. 355.00
Imp. Postevine of Isle 36295, Geo. H. Silverwood, Edgerton, Wis. 175.00
Imp. La Signorina III 26698, M. R. Pritchett, River Falls, Wis. 290.00
Rosalie of Elmlawn 40425, Henry Erickson, Cashton, Wis. 275.00
Flower of June 25882, Chas. Tomfohede, Aspin, Wis. 305.00
Jessamine of Clovermead 37653, B. F. Wilson, Wausau, Wis. 300.00
Chilmark's Sweetheart 24806, James Marsh, Lewiston, Minn. 185.00
Brightsome 33380, Carl Faldet, Iola, Wis. 305.00
Alpha 33379, Fred Patterson, Harrisburg, Ill. 310.00
Robert's Boy of Salem, Harry Jewett, Bangor, Wis. 190.00
Olie of Oswego 37103, W. E. Hubbard, Norwalk, Wis. 400.00
Imp. Fan II of Bas Sejour 10797, R. F. Wilson, Wausau, Wis. 300.00
Queen of Rosedale 18765, E. H. Bente, Elkader, Ia. 290.00
Polly's Dairymaid 37596, K. O. Gaarder, Holman, Wis. 450.00
Allenwood Duchess 42704, O. S. Goodwin, Battle Mich. 305.00
Giddy Folly's Twin Sister 42882, Peter Hiam, Ferryville, Wis. 215.00
Judge Paul's Gypsy 38189, Fred Patterson, Harrisburg, Ill. 250.00
Imp. Julia's Maid III 7824, Chas. Tomfohede, Aspin, Wis. 275.00
Yeksaden 27948, Will Jones, Waukesha, Wis. 350.00
Ester Perkins 28094, S. L. Dudley, West Salem, Wis. 325.00
Imp. Charmante's Pride II 6833, D. D. Tenney, Minneapolis, Minn. 330.00
Bull Calf, Peter Dengel, La Crosse, Wis. 105.00
Heifer, J. C. Hol, Des Moines, Ia. 200.00
Bull, D. Trimbell, West Salem, Wis. 120.00
Wynette 27088, W. A. Franklin, Town Hill, Pa. 310.00
Manoa's Lillie 32499, O. W. Lehmann, Chicago, Illinois. 475.00
Branwen 27091, W. A. Franklin, Town Hill, Pa. 350.00
Spotsdale of Fairview 21315, W. A. Franklin, Town Hill, Pa. 375.00
Bonite of Fairview 22776, J. M. Halderson, Holman, Wis. 600.00
Chimes Rilma 40789, O. S. Goodwin, Battle Creek, Mich. 465.00
Imp. Polly 33069, O. W. Lehmann, Chicago, Ill. 600.00
Bells Bob Rilma 25209, O. W. Lehmann, Chicago, Ill. 525.00
Bull—Van Dorn, C. Wallo, Stoddard, Wis. 120.00
Heifer, M. J. Wrolstad, Northland, Wis. 290.00
Bull—Glenwood Ben Bell, Camp Douglas, Wis. 125.00

Annual Meeting of the Eastern Guernsey Breeders' Association

(Continued From Page 48)

I think that if your association will say to these different fair associations, "We insist upon having our breed judged by a man who is a breeder of that breed, and not by a so-called professional judge." (Applause.) I have stood in the ring and I have seen some of the most outrageous things done by the so-called professional judges, the expert judges, that if a breeder had done it, he would have been hauled over the coals by his brother breeders and not have left it to the papers to haul him over the coals. I think it is the duty of every association to insist that the men who judge their cattle shall be the breeders of those cattle, and it stands to reason that a man who has made a study of that one particular breed all his lifetime is far better equipped to judge that breed than one man who has made a try at a whole half dozen breeds and has never got one right. (Applause.)

WHAT A
DE LAVAL
CREAM SEPARATOR
SAVES
over any other separator or creaming system

Quantity of cream that no other separator will recover completely, particularly under the harder conditions of every day use.

Quality of cream as evidenced by De Laval butter always scoring highest in every important contest.

Labor in every way over any gravity system, and also over any other separator, by turning easier, being simpler, easier to clean and requiring no adjustment.

Time by hours over any gravity system, and as well over any other separator by reason of greater capacity and the same reasons that save labor.

Cost since while a De Laval cream separator may cost a little more than a poor one to begin with it will last from ten to twenty years, while other separators wear out and require to be replaced in from one to five years.

Profit in more and better cream, with less labor and effort, every time milk is put through the machine, twice a day or 730 times a year for every year the separator lasts.

Satisfaction which is no small consideration, and can only come from knowing you have the best separator, with which you are sure you are at all times accomplishing the best possible results.

Easily proven—these are all facts capable of easy demonstration and proof to any user or intended buyer of a cream separator. Every De Laval agent is glad of a chance to prove them by a De Laval machine itself—without the slightest obligation on your part unless entirely satisfied.

If you don't know the nearest De Laval agent, simply address the nearest main office as below.

DEWEY'S
READY RATION

Guaranteed Analysis

25 per cent. Protein
7 " " Fat
9 " " Fibre
50 " " Carbohydrates

Composition:

Eagle Distillers Dried Grains, Choice Cottonseed Meal, Old process Linseed Oil Meal, Winter Wheat Bran and Middlings, Pure Hominy Feed, Malt Sprouts, ½% Salt.

Dewey's Ready Ration gives satisfaction. Every dealer to whom we have sold it has repeated on his order after a sufficient length of time had passed to give it a test. There has not been a single complaint as to its quality since we began making it. This we consider as high a recomendation as any feed could have. Dewey's Ready Ration practically sells itself, and you may know that it is a mighty good feed to do this. Ask your dealer for Dewey's Ready Ration, or drop us a line and we will send you a sample and full particulars.

We also put out Three D Grains (Dewey's Distillers Dried Grains.) The highest and best quality of Distillers Dried Grains are put out under this brand. We can load mixed cars consisting of mill feeds, corn, oats, corn goods, distillers dried grains, cotton seed meal, oil meal, hominy feed, etc. Get our prices before placing your order elsewhere.

Thick Cream

The advantages of thick cream over thin cream are many and very important.

Thick cream contains less milk, consequently, less souring elements and therefore will keep sweet longer.

Thick cream is less in bulk and therefore more easily and cheaply transported.

Thick cream causes less loss of butter fat in churning.

Thick cream leaves a greater quantity of the skim milk at home to feed to calves and pigs.

Thick cream brings a higher price—many creameries give from **two** to **five cents more** per pound for butter fat from thick cream than from thin cream.

At a demonstration of cream separators at the Iowa Agricultural College, January 8th, 1914, the

UNITED STATES
CREAM SEPARATOR

separated cream that tested 47 per cent. butter fat. The next nearest competitor tested 33 per cent. butter fat and the second nearest tested 26 per cent. butter fat.

The United States is the only separator that can separate thick cream and separate clean. Others, in attempting to equal it, clog or leave cream in the skim milk.

The United States Separator has a record of 65 per cent. butter fat and made perfect separation, as shown by the skim milk test and holds

The World's Record for Close Skimming

in 50 consecutive tests run for 30 days with 10 different breeds of cows.

UNITED STATE DEPARTMENT OF AGRICULTURE
Bureau of Animal Industry
Washington, D. C.

December 20, 1913.

Mr. Thomas F. Ryan,
Oak Ridge, Va.

Sir:—In accordance with your signed agreement with this Bureau, the regular annual retest with tuberculin was applied to your herd of cattle by Dr. C. E. Lindburg of this office upon Dec. 12 and 13. As a result of this retest your entire herd of 65 cattle was regarded as free from tuberculosis.

Very respectfully,
R. W. HICKMAN,
Chief Quarantine Division.

Economy in Dairy

The problems of dairying are not at all mysterious or difficult of solution. It is a question of obtaining a cow that will give the most milk for the feed consumed, and in supplying that cow with feed which will make milk. These, together with good care, as care is ordinarily understood by the man who is successful in handling live stock, will make the dairy herd profitable and highly successful.

Sire *Jigger of the Glen* (15740)
Dam *Wood Ford's Aeda* (30184)
Born—Sept. 10, 1911
Dark fawn with white markings.
Breeder and owner:
J. W. Alsop, Avon, Conn.

48635 **Wood Ford's Bessie**
Sire *Box of the Glen* (15745)
Dam *Wood Ford's Katherine* (30185)
Born—Sept. 21, 1911
Fawn with white markings.
Breeder and owner:
J. W. Alsop, Avon, Conn.

48636 **Wood Ford's Adeline**
Sire *Jigger of the Glen* (15740)
Dam *Lady Belle Marshall* (30177)
Born—Nov. 8, 1911
Dark fawn with white markings.
Breeder and owner:
J. W. Alsop, Avon, Conn.

48637 **Wood Ford's Elvira**
Sire *Jigger of the Glen* (15740)
Dam *Wood Ford's Constance* (26193)
Born—Nov. 11, 1911
Dark fawn with white markings.
Breeder and owner:
J. W. Alsop, Avon, Conn.

48638 **Nora of Big Spring Farm**
Sire *France's Jewel's Champion* (17970)
Dam *Imp. Nora VI. of les Houards* (21046)
Born—March 8, 1911
Dark fawn with white markings.
Breeder and owner:
Miss Willie Lee Inman, Leesburg, Va.

48639 **Marguerite of Oakwood**
Sire *Ouida's King* (9009)
Dam *Lord Mar's Lily of Oakwood* (37233)
Born—June 26, 1913
Light fawn with white markings.
Breeder and owner:
L. S. Meyer, Springfield, Mo.

48640 **President's Bijou of Springfield**
Sire *Blanche Daisy II.'s King* (19106)
Dam *President's Bijou of Lewison* (35877)
Born—Sept. 17, 1913
Red fawn with white markings.
Breeder and owner:
F. H. Denny, Sewickley, Pa.

ASHLAND'S VIOLET OF LYNDON HEIGHTS 22045

2501 Ashland's Violet of Lyndon Heights 22045

Sire Ashland of Lyndon Heights (10079).
Sire Imp. Prince of Lyndon Heights (8320).
Dam Pride of Ashland (13410) A. R. 162.

Dam Imp. Violet of Lilyvale II. (15172) A. R. 257.
Sire On Guernsey Columbia (R. G. A. S. 1185 P. S.) A. R.
Dam On Guernsey Violet of Lilyvale (6408 G. H. B.).

Breeder C. R. Myer, New Brunswick, N. J.
Owner Frank A. Hotchkiss, Millerton, N. Y.
Born Nov. 23, 1906. *Calved* Nov. 9, 1912. *Served* July 1, 1913.
Requirement for admission: 360.00 lbs. butter fat.

Official year's record: 9086.50 lbs. milk; 525.74 lbs. butter fat.

Bethany, W. Va.

The Agricultural Guild

Offers for sale **at moderate prices** a few bull calves **good enough to head choice herds,** and at low prices. Bulls that will improve most herds. In herds belonging to the members of the Guild are found the following bulls :

Imported Border Raider

He is a show bull of very high quality, which he impresses on his calves. He carries 27 1-2 per cent. of the blood of May Rose II.

Dairymaid's Glenwood of Pinehurst 10548

His full sister is the second highest producing cow of the breed. His three tested daughters averaged 467 pounds of fat as two-year-olds.

Imp. Pride of Day 1849 P. S.

He was a King's Cup winner on the Island. His full sister produced 583 pounds of fat as a two-year-old. His calves are uniformly good.

Stranford's Glenwood of Pinehurst VII. 17392

This bull furnishes the best combination of the Selma, Dairymaid, Stranford Princess and Glenwood blood to be found. His calves are very choice.

Besides these great bulls, our herds contain sons or grandsons of Governor of the Chene, Masher's Sequel, Galaxy's Sequel and King of the May.

With the best of bulls, and over one hundred officially tested cows, we are in a position to breed Guernseys intelligently.

We are Breeders, not Dealers

We offer for your selection choice young bulls backed by good records. We price them worth the money.

We veal all bull calves that are not reasonably sure to improve the dairy stock of the country. We guarantee satisfaction.

All our Herds are Tuberculin Tested

WALTER A. COOK, Manager, Box 114, Tinley Park, Illinois

Ledyard Bay Guernseys

Young Bulls and Bull Calves for sale from cows with big records and sired by Old Faithful 14947 and Ledyard Bay 2d 19299.

Old Faithful is a large bull with good back and well sprung ribs, giving him great feeding and dairy capacity. In breeding he is backed by the cream of the Helendale Herd.

Ledyard is full brother to Azucena's Pride 2d, holder of the following records:

12633.30 lbs. milk; 706.46 lbs. fat as a 2½ year old.
16203.90 lbs. milk; 855.70 lbs. fat as a 4 year old.
Champion Record for the class.

It is a notable fact that the sire and dam of Ledyard Bay 2d are direct descendants from such noted animals as Lord Stranford, Sheet Anchor, Rutila's Daughter, Lucretia, &c.

Ledyard Bay 11074, the sire of Ledyard Bay 2d, has now eight daughters in the Advanced Register that average 520 lbs. fat, all but two with first calf. I have ten more. We wonder what they will do when tested.

Write for my Sales List and Folder.

Millerton - - - - - New York

Fills Your Silo Quickly

With Less Power and Labor

You can operate this machine with a 4 h. p. gasoline engine. It's the lightest running blower type of ensilage cutter made—The *throwing, blowing, lifting force* carries the ensilage in a steady full stream rapidly up into the highest silo without waste of power. The ensilage packs perfectly and keeps sweet and succulent. The

Papec Ensilage Cutter

is easy to set up and take down. Simple in construction, not easy to get out of order. The entire frame is one solid piece of semi-steel. The bearings are always in line, run smoothly and will not heat. The feeding mechanism is geared to the main shaft—always gives you the desired length of cut. THE PAPEC ENSILAGE CUTTER is not chain driven but has heavy gears which transmit all the power. It cuts ensilage perfectly and swiftly—as fast as you can bring the corn to the machine.

Write for Illustrated Catalog. Send today for this book. It shows how The "Wonderful Papec" cuts ensilage with less power, time and labor.

PAPEC MACHINE COMPANY,

Box 37 Shortsville, N. Y.

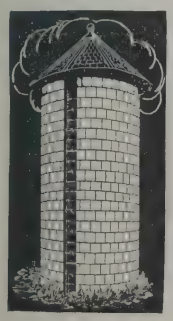
FOR SALE. **Several Choice Heifer Calves and a few May Rose Bull Calves.**

Write for Particulars.

EDWARD A. WALTER,



WALWORTH, WIS.

Walworth is on the C. M. & St. R. R. R., two hours ride from Chicago.

Guernseys Deserve Good Ensilage

To keep ensilage fresh, sweet and succulent from the time the silo is filled until the last forkful is fed, you need to protect it from heat, cold and moisture. The

NATCO IMPERISHABLE SILO

is built of vitrified clay hollow blocks which contain two dead air spaces. The non-porous quality of these blocks and their glazed sides exclude all air and moisture. They make a silo wall that is

Weatherproof, Decayproof, Fireproof, Verminproof

The "Natco never needs painting—no hoops to tighten—no continual repair bills. It lasts for generations and keeps ensilage in perfect condition *always*. Attractive in appearance—an asset to your permanent farm buildings. *Any mason can erect it.*

Write today for illustrated book No. V. describing the construction of this better silo—mailed free.

National Fire Proofing Company

Donald of Ellenwood 16329

One of our herd bulls, is certainly a splendid individual. His pedigree shows such individuals as Glenwood's Main Stay 6067, Mainstay 3789, Glenwood Girl 6th 9113, Sheet Anchor 2934, Manager 3393, and other famous A. R. blood. He resembles very much Old Sheet Anchor. Our other herd bull, Glenwood's Main Stay 24th 12664, who is sire to Donald, has proven himself a worthy sire.

About half of our cows have been admitted to the Advanced Registry with creditable records. Their blood traces back to such ancestors as Divan 5846, Pat of Haddon 3919, Sheet Anchor's Rutila 9170, Glenwood Boy of Haddon 4605, Glenwood's Champion 15639.

Write for price list and descriptive breeding of young bulls from A. R. cows. We are also breeders of select Berkshires. Visitors are welcome.

Here's a Safe Guide for You When Your Cattle Get Sick.

Many and many a time your animals get sick, and you would like to treat them yourself—You may have this greatest of all live stock books to aid you.

DR. DAVID ROBERTS'
PRACTICAL HOME VETERINARIAN

It covers every disease, makes the symptoms plain. And it is written by Dr. Roberts, the National Veterinarian, who has been Official Veterinarian year after year at the great Live Stock Shows and is called to all parts of the country to treat valuable animals. It is

A 184-Page Cloth Bound Book

fully illustrated. You can get it at most drug stores where Dr. Roberts' live stock medicines are also to be had. You should not fail to get it and keep it as a permanent guide and reference book. It will be sent direct on receipt of 25c. if you do not find it at your drug store. Ask the druggist or send for it today and be ready for emergencies Medicines sent direct where druggists do not keep them in stock. Address,

Dr. David Roberts Veterinary Co.,

4057 Wisconsin Ave., - - Waukesha, Wis.

Mortality Insurance

FOR

HORSES and CATTLE

I can insure your stock under a policy that covers the animals anywhere in the United States of America and Canada, against all risks and hazards as well as their trans-shipment from one point to another.

Write me for full particulars, rates, etc.

Molassine Meal

MADE IN ENGLAND

Unique--Distinctive--Superior

It is made by a *specially prepared process* **which produces a feed absolutely unlike anything else in the world.**

For 20 years it has watched imitators come and go, but today Molassine Meal holds the field as the one and only feed of its kind that will produce the results claimed.

It is today being fed and recommended by Agricultural College graduates, who having carefully educated themselves in the theory of farm problems, now find Molassine Meal in every day practical farm life produces most satisfactory results.

Insist on having Molassine Meal, as nothing else will take its place.

If your regular grain dealer will not supply you, write us--in fact, write us anyway, for we are quite sure we can improve your feeding ration.

Why

You can get better results

from your regular high protein ration by using it?

Because no other feed in the world is made by this special, patented process. It is absolutely different from any other feed.

3 lbs. of Molassine Meal with 9 lbs. of Protein Ration will produce more than 12 lbs. of Protein Ration.

Unique—Distinctive—Superior

A PERFECT FOOD FOR YOUR HORSES, COWS, PIGS AND SHEEP AND POULTRY

You will find Molasine Meal being fed today by Guernsey cow owners who want results.

Look for this Trade Mark on every bag

"MOLASSINE MEAL" is put up in 100 lb. bags. Ask your Dealer for it or write direct.

Send for our latest Feeders Book---it is free.

Let Us Help You With Your New Barn

If you expect to build a barn, or if you intend to remodel the one you have, the most profitable step you can take *first* is to get in touch with *James* Barn Plan Service.

We are not only known throughout this and other counties as the *originators of sanitary barn equipment ideas,* but thousands of *James* barns are giving efficient service every day because of their construction—proving that the *JAMES* reputation rests upon knowing how to *build* barns as well as how to equip them.

James Barn Plan Service

Is at your command—right now. All you need to do is write us a letter or postal, or use this coupon, and by return mail we'll tell you exactly how *JAMES Barn Plan Service* can help you.

We publish a valuable booklet called "Helpful Hints on Barn Construction." Just tell us when you expect to build or remodel, and how many cows you want to take care of, and we will send you a *free* copy, postage prepaid. Do this today and get the *right* start in your barn work.

Imported and Home bred in calf heifers. Also, bull calf, "Glenwallen of Wyanoke, 25362", dropped April 28, 1913. A good, thrifty individual with plenty of "Redink" in his breeding. Also, 4 grade in calf heifers, sired by Beth's Glenwood of Pinehurst—very promising.

EDWARD S. HARMER **Moorestown, N. J.**

CORK BRICK make Safe, Durable, Sanitary, Comfortable Stall Floors For Cattle and Horses

Do away with cold, hard, slippery stalls by using Cork Brick floors. Cork Brick, the one perfect stall floor material, combines all the advantages of wood and concrete with none of the disadvantages. You'll have healthier, thriftier, better looking animals if you floor your stalls and runways with

ARMSTRONG CORK BRICK

SAFE: Insure your stock! Many valuable animals have been crippled and lost because of slippery stall floors. Cork Brick are never slippery, wet or dry.

SANITARY: Cork Brick absorb less moisture than any other flooring in use. They do not retain poisonous and germ-laden acids and unhealthy odors. The surface of Cork Brick is smooth, joints are tight. Urine and manure do not effect it. Easily cleaned in no time. No lime or other disinfectants are needed.

WARM: Save your cows from rheumatism, garget and other udder troubles. Don't let them lie on cold, clammy, hard floors. Cork Brick maintain warm, even temperature the year around. Some users save 50% on bedding. The brick require no artificial heat even in coldest weather.

EASY UNDERFOOT: No sore hoofs, "bunchy" joints or stiff muscles. Cork Brick are resilient and elastic. For livestock it is almost like standing on turf.

DURABLE: Cork Brick neither splinter like wood, nor chip and crumble like cement. Their resiliency and toughness give long life in service. They stay "put" and there is practically no limit to their wear.

EASY TO INSTALL: in old or new barns. Any intelligent workman can lay Cork Brick. Use either cement or wood base. Cork Brick make old barns new

Dr. David Roberts of Waukesha, Wis., says: "It is very essential to keep the teats and udders in healthy condition, protected from cold and damp floors. There is not an animal in my herd with a defective teat or udder, which speaks well for your Cork Brick floor."

We have hundreds of testimonials just as emphatic in their praise of Armstrong Cork Brick.

SPECIAL TRIAL OFFER: Here's our special offer to those who wish to try Cork Brick before completely equipping their barns. Send your name and address with money order for $4.00 and we'll ship immediately 66 brick—enough to floor one stall 3 ft. 6 in. x 5 ft—freight prepaid—to any point east of the Rocky Mountains, with full directions for laying. Four brick cover one square foot. This is a limited offer—made to convince you. $4.00 settles the stall floor problem for all time.

FREE SAMPLES of Armstrong Cork Brick sent on request, with beautifully illustrated booklet telling the whole story. Don't delay. Write us now.

The UNADILLA Beats Nature

In anticipation of doubling the feeding value of the 1914 crop, and receiving for your labor all that you are entitled to, order a UNADILLA SILO forthwith. It will perform wonders with corn. Nutritious, succulent silage in the ration, both winter and summer, enables one to dispense with tne expense of half the hay and mill feed. This saving, plus the value of the increased milk yield, will equal the cost of a UNADILLA the first year. Do you know of a surer way, excepting the raising of pure-bred Guernseys, to make your money return a

100 PER CENT. DIVIDEND

Write for catalogue illustrating the time-tried and practical features that have given the UNADILLA a national reputation for being the best built and most convenient Silo in use. We are sales agents for the celebrated

PAPEC PNEUMATIC ENSILAGE CUTTER

Illustration shows a Papec filling a 60 ton Unadilla on the Moore Villa Guernsey Farm in Otsego county, N. Y. Get Unadilla-wise and Papec-wise before ordering a Silo or Cutter. Discount on May and June delivery orders.

OFFERING OF IMPORTED GUERNSEYS

My recent importation consisted in large part of heifers not bred. A selection of twenty-five can now be offered that are safely in calf to the undermentioned

MAY ROSE BULLS

and the resulting progeny should prove highly desirable since heifers and service bulls alike, are of the most popular breeding

Imp. Itchen May King 25174

SIRE—Imp. Itchen Red Raider 27342, by Imp. Moss Raider 22155 out of a full sister to Imp. May Rose King.

DAM—Itchen Verbena 5501 E. G. H. B. by May Day 1132 E. G. H. B., who sired the renowned Itchen Daisy III 15630.

This young bull is a superb individual—a worthy son of a famous sire and his extended pedigree shows five crosses of May Rose blood, through the best channels.

Don Bernardo of Linda Vista 20617

SIRE—Jethro's May King of Linda Vista 14591, own brother to Rose of Langwater 24204 (King of the May-Hayes Rosie) who holds third place in Class F with record of 12966.50 lbs. milk—669.89 lbs. fat and third place in Class D with record of 15008.20 lbs. milk—751.62 lbs. fat.

DAM—Rutila's May Rose 24946 who holds fifth place in Class E with record of 11415.75 lbs. milk—655.93 lbs. fat by Imp. May Rose King 8336.

This cow with her dam and grandam were the three best cows bearing this relationship, that I have ever known.

The Great Herds of all time have built up by the use of Great Sires

We are building up a great herd at Woodend Farm

To this end we have added **Three Great Sires.** The first of these is

May Rose King 2nd

Sired by the great May Rose King, son of May Rose 2nd, and out of Imp. Secret's Primrose by Golden Secret, who is a grandson of May Rose 2nd. The union of the blood of May Rose King, with that of a daughter of Golden Secret, is the most potent May Rose breeding possible. May Rose King 2nd is a **show bull**, and a sire of show animals as well as producers. One of his sons was 2nd as a two-year-old at the last National Dairy Show, another was first in yearling bulls at Brockton in 1912. Three of his sons now head five herds. His first daughter to be entered in the A. R. made 448.69 lbs. at 2 years, 5 mos., two others now in test promise to do as well or better. We will show you his picture later, we will also tell you of our other new sires. We always have fine bull calves by first-class and A. R. sires and out of A. R. cows. Come and see them; if you cannot come, write for list. If you are interested in anything listed, we will send his picture and more particulars.

Sailor Boy 2858 P. S.

First Prize R. G. A. S., Whit. 1912
The King's Cup, August 1912.
First Prize, Guernsey Farmers' Show, 1913.

Sailor Boy is considered by Island critics to be the best and handsomest bull which has left the Island of Guernsey. He excels over all his Island brothers in breeding, form and vigor; he is a bull of great scale and finish, he is very long, deep through the heart, with strong hindquarters and loins, fine withers, neat head with fine incurving horns, and a magnificent switch, these important qualities blending into one perfect whole. His prize winnings on the Island are proof of his superiority, as he was given the Cup offered by His Majesty, King George V, for the best bull on the Island of Guernsey. He should be able to win in any company. His pedigree is strong enough in Advanced Register and show ring records to guarantee his usefulness and his dam Valentine III 7514 P. S. who won third prize R. G. A. S. Whit. 1913, completed her Island Advanced Register test on February 5th, 1914, with a record of 15,476.12 lbs. milk; 783.04 lbs. fat, equal to 913.54 lbs. butter. She carried her calf seven months and twenty days during this test, freshening on March 15th, 1914. This is the highest A. R. record made on the Island of Guernsey and we believe it to be the highest record of the breed for a cow carrying her calf for this length of time while on test.

Mr. Phillips believes that Sailor Boy is the greatest sire ever offered at Public Auction and he takes pride in giving American breeders the opportunity to buy the best the world produces at his annual sales.

FREDERICK PHILLIPS

Villa Nova, Penna.
Frie Baton, Guernsey

THE IMPORTATION FOR OUR

ANNUAL SALE

THURSDAY, MAY 14, 1914

will be headed by

Sailor Boy 2858 P. S.

1st Prize Guernsey Farmers' Show, 1913

SIRE--BILLY'S FANCY 2205 P. S., Fourth Prize R. G. A. S., Mich. 1909.

DAM—VALENTINE III 7514 P. S. She has just completed her Island, Advanced Register test with a record of 15,476.12 lbs. milk, 783.04 lbs. fat, 913.54 lbs. butter; and carried a calf during seven months and twenty days of the test.

We claim for "SAILOR BOY" 2858 P. S.

1. That he cost more money than any other bull previously imported.
2. That no bull, combining his show-ring and butter quality, ever offered at public auction, had for a dam a cow who produced 15,476.12 lbs. milk, 783.04 lbs. fat on Advanced Register test.
3. That no bull of his qualifications has ever been imported or sold in this country.

Among the FEMALES to be offered are

MAY KING'S POLLY OF THE FRIE BATON

1st Prize R. G. A. S. Whit 1913
1st and Special, W. U. A. Show 1913

Langwater Guernseys Are Producers

LANGWATER Dorothy 27944, has established a **precedent** for the cows of the Guernsey breed by making a record of 16099.7 lbs. milk and 781.51 lbs. fat as a three and one-half year old and **carrying** her **calf** seven months while doing so.

This is not only the highest record of the breed for a cow carrying her calf this length of time while on test, but it places Langwater Dorothy seventh among the Advanced Register cows of the breed as a milk producer. Langwater Dorothy is a daughter of King of the May and stands first in milk production and second in butter fat among his daughters.

Langwater Dorothy 27944

2 year old record: 13022.7 lbs. milk; 649.78 lbs. fat.
3 1-2 year old record: 16099.7 lbs. milk; 781.51 lbs. fat.

Coming Guernsey Events

Don't Forget Them

May 12—Guernsey Breeders' Dinner and Conference, Hotel Imperial, New York. Speaker, Prof. T. L. Haecker, Minn., on The Relation of Food to Product in Milk Production.

May 13.—Annual Meeting of The American Guernsey Cattle Club, New York.

Public Sales of Guernseys.

Frederick Phillips, Villa Nova, Pa. May 14. (See pages 1-18-19 and back cover).

Waukesha County Guernsey Breeders' Association, Waukesha, Wis. May 20. (See pages 8-9 and 37).

The Annual Meeting of The American Guernsey Cattle Club

Will be held at Hotel Imperial, Broadway & 3d Sts., New York City, on Wednesday, May 13, 1914, at 10.30 a. m.

Besides the regular business of hearing the reports of the year's work, the election of officers, &c., the following special matter will be presented:

To see if the Club will vote to change Section 8 of the By-Laws so as to read:—

SECT. 8. TRANSFERS.

Every change of ownership must be recorded upon the records of the Club.

It shall be the duty of the seller to file with the Secretary the necessary application for such transfer on the regular forms furnished by the Club.

It is forbiden to transfer to any other person than the actual purchaser. Sellers doing so lay themselves liable to the penalties imposed by the Constitution and By-Laws.

Buyers are warned that the transfer must read direct from the person from whom they purchase the animal.

In case of the neglect or refusal of the seller to make application for a transfer, a record of transfer may be made by vote of the Executive Committee on satisfactory evidence of sale and delivery.

No transfer shall be cancelled except in case of error or by vote of the Executive Committee.

The original Certificate of Entry on which there is a copy of the sketch of the fawn and white markings as filed at time of registration of the animal must accompany the application for transfer. No record shall be made on said certificate except at the office of the Club by direction of the Secretary.

An application for the transfer of a female in calf must state the date of service and name and number of the service bull.

Transfer Fee, in all cases, $1.00. The Club looks to the seller for the payment of all transfer fees.

Failure to comply with these provisions for transfer may be deemed an infraction of the By-Laws, and the offender will be subject to such penalty as is within the power of the Club.

Opportunity will be given for consideration of matters relating to the welfare of the Club and its work.

Guernsey Breeders' Conference.

In accord with the custom of the last two years, a special conference or gathering of Guernsey breeders will be held at Hotel Imperial on Tuesday evening, May 12, 1914.

This being the evening prior to the Annual Meeting, it is felt that a great deal of good can be accomplished for the breed and make the occasion of much interest and aid to breeders by having an opportunity for the discussion of matters of interest.

The following program has been arranged.

At 6.30 o'clock, arrangements have been made for those in attendance to dine together at the Hotel. A special menu and accommodations have been provided.

Immediately following the dinner, or at 8 o'clock, Prof. T. L. Haecker, of Minnesota, will address the meeting. Prof. Haecker needs no introduction to Guernsey breeders. A prominent breeder, speaking of his work says:—"By his investigations of dairy problems he has contributed more to humanity than any other living man. Ten years' experimentation at the Agricultural Station by Prof. Haecker, which resulted in his discovery that dairymen for hundreds of years had been feeding their cattle too much, and the scientific feeding schedules worked out by the expert, have revolutionized the dairy industry in America."

All breeders of Guernseys or those interested in the breed are invited to attend.

List of Advanced Register Sires.

In this issue will be found the list of Advanced Register Sires corrected to March 1.

It was hoped and expected that the list of Producing Dams would appear at the same time. We regret this is impossible. We expect to be able to publish same next month.

Our Cover Illustration.

The picture of Golden Cherry 5118 of the English Guernsey Herd Book, appears on the cover of this issue. See page 38 for description.

Ravenscroft Coronation 25173

Owned by F. W. Roebling

Oaklands Farm, located at Trenton Junction, N. J., and owned by Mr. F. W. Roebling of Trenton, N. J., is one of the Guernsey breeding farms established during the last few years. The buildings and appliances are all designed in accordance with the latest ideas regarding sanitation, ventilation, light, pure water, perfect drainage and roomy quarters. The farm consists of 250 acres, which although cultivated for over 200 years is now in the highest state of cultivation.

The herd of Guernseys consists of 52 imported cows and heifers of fine quality, a number being in the A. R. class and ten now under test for qualification. The head of the herd is "Ravenscroft Coronation," the bull shown at the head of this article. Owners and breeders will find much of interest in the remarks following.

"Ravenscroft Coronation" was dropped March 17, 1911. He is light fawn in color and prettily marked, and has a level back, straight rump, deep body, and is an exceptionally choice individual.

Upon referring to his pedigree it will be noted that he was sired by Hayes Royal III, imported a year or more ago by Mr. Frank S. Peer, on order of Mr. I. C. Blandy, proprietor of Follyland Farm, Greenwich, N. Y., Mr. Blandy having commissioned Mr. Peer to purchase for him the best English bred bull obtainable.

Hayes Royal III won first at the Royal and Royal Counties shows in England in 1909. He, in turn, was sired by Itchen Royal, 1756 E. G. H. B. Itchen Royal won second at the Royal Show, first and reserve at the Royal Counties, and third at Tunbridge Wells in 1906; third at the Royal, first at the Bath and West England, first and reserve at the Royal Counties, third at Tunbridge Wells, and first at Uxbridge in 1907.

The dam of Hayes Royal III is Hayes Olive IV 6552. She is a great prize winner, having won first, third and second, respectively, at the Royal, Bath and West England and Royal Counties in 1906, with V. H. C. at the Royal Counties and second at Tunbridge Wells in 1907.

Itchen Royal was sired by the noted May Rose Bull, Golden Secret, a bull too well known to require much comment. He has five or more daughters in the Advanced Register, and also three daughters not in the Advanced Register, but having A. R. progeny. Of these three, Imp. Grace of Lilyvale III, 18925, is the dam of the May Rose cow, Queen of the Roses, with an A. R. record as a two-year-old of over 10,000 lbs. of milk and 511 lbs. of butter fat, and a 3½ year-old record under re-test of 12,233 lbs. of milk and 604.94 lbs. of butter fat. For some time Queen of the Roses held third place in Class D.

Another granddaughter of Golden Secret, Itchen Lily V, 23540, is the dam of Langwater Hope, 27946, the leader of Class F, with a record of over 15,000 lbs. of milk and 773 lbs. of butter fat.

The dam of Itchen Royal is Royal Rose, in turn sired by Active Lad, the sire of Daisy's Gem, 3341 E, who is the dam of Mr. Ames' Imp. Itchen Daisy III, perhaps one of the greatest show cows, producer and re-producer in this country today.

The sire of Hayes Olive IV, Coronation King, has two daughters in the Advanced Register, viz: Maid of the Vrangue, A. R. 913, and Hayes Imperale II, A. R. 1122.

The dam of Hayes Olive IV, i. e., Hayes Olive, was a noted prize winner; won second at the Royal Counties in 1904 and first at Tunbridge Wells the same year; also first at B. D. F. A. in 1905.

The sire of Coronation King, Harley of Chitral, is an A. R. bull, having two daughters in the Advanced Register, (A. R. numbers 310 and 421), also three daughters not in the Advanced Register, but having A. R. progeny, and besides the son, Coronation King, in the Advanced Register, he also has another son, DeWet II, R. G. A. S. 1518 P. S.

Harley of Chitral was the sire of Loyal of the Hunguets, who has two A. R. daughters, (A. R. numbers 136 and 827). Loyal of the Hunguets is also the sire of Itchen Jewel, the sire of Imp. May Rose King, who, in the judgment of a number of prominent breeders, is regarded as the greatest Guernsey bull ever imported into this country.

Succeeding with Guernseys

By Chas. H. Jones

Paper Read Before the Farmers Week, Mass. Agricultural College

I have been asked to speak to you in reference to "Succeeding with Guernseys." Before I can intelligently discuss that question, we must consider first who it is that wishes to succeed with Guernseys. In other words, who, among the various classes of farmers and dairymen should be interested to undertake the breeding and development of the Guernsey cow?

From my point of view, and as a result of my observation, I should say that every class of people but one that keeps cows should have Guernseys. Those who wish to produce milk at the lowest possible cost without regard to quality can probably do better with other breeds, but the moment any question of quality, or any condition of competition in the sale of products arises, or any factor enters into the proposition which has to do with the real value of the product, then the claims of the Guernsey cow must receive attention.

Let us consider for a few moments the different classes of people likely to own cows. We will first discuss the man of means interested in the development of thoroughbred stock, and anxious to have a high class herd of large producing cattle. He must, of course, take Guernseys. So far as I can see, there is no other choice open to him. In the first place, he desires the best and most attractive products. He wants milk and cream and butter of the very best appearance and quality for his own use and to interest his friends.

When quality of product alone is considered, I have no doubt you will all concede that it is a question only between the Jersey and Guernsey cows. These Channel bred cattle produce milk richer in butter fat and solids than any other breeds. As between Jerseys and Guernseys, there are certain points of difference, which, considered from the point of view of the "well-to-do" breeder, must prove entirely convincing. The Guernsey milk and the Guernsey cream, as is well known, have a color entirely unequalled. The most experienced judges have determined that the rich, yellow color carries with it a delicacy of flavor not to be found in the milk of the Jersey.

Another very important consideration is the fact that the Jerseys have been bred and developed for many years by numerous skillful and experienced breeders, and the breed seems to have reached about the limit of its development. It would require a man of considerable audacity or very exceptional experience who would undertake to start the breeding of Jerseys at this time, with the expectation of outdoing the achievements of those great masters of the breeder's art who have placed the Jersey breed where it stands to-day. On the other hand, the Guernsey is only at the beginning of its career. The type of the Guernsey cow is by no means fixed, to the same extent as is that of the Jersey, and the productive capacity of the Guernsey has by no means reached its limit. Possibly some of the enthusiastic advocates of the Jersey will question this proposition, but an impartial examination of the facts points clearly to this conclusion.

Let us examine for a moment the records of the two breeds, as shown by the official register of each. Mr. Edmund Sears of Wayland, has recently tabulated the performance of the best three cows of each breed for all the classes of the Advanced Register, and a comparison of the breeds according to his figures is very suggestive.

In Class A, representing cows five years of age or over, the Jersey records exceed the Guernsey records by a very small margin.

In Class B, representing 4½ to 5 years of age, the Jerseys are ahead in the production of butter fat, but the Guernseys are ahead in the production of milk, making this class about a stand-off.

In the younger classes, the Guernseys simply out-distance the Jerseys, exceeding their records for milk and butter-fat by very large amounts, and the high records of the Guernseys in these classes have only been recently made.

These figures point unmistakably to this conclusion, namely, that the Guernseys are just beginning to come into their own. The feeding and development of the Guernsey cow offer, therefore, a better field for the exercise of intelligence and skill than any other breed, and considering the market price to-day, offers a greater reward for successful effort. The American Guernsey Cattle Club is co-operating with breeders and assisting them in their labors in a most satisfactory way. The Advanced Registry system for yearly tests, first established for this breed, gives every breeder an opportunity to exactly measure the production of his animals. This, of course, is the basis of successful breeding, and the publication by the club, of all the noted sires and dams of the breed with their progeny, furnish invaluable data. Every other important item of information necessary for guidance can be obtained through the publications of the Club, or through correspondence with the Secretary, so that you will see that many of the difficulties in the pathway of successful breeding have been eliminated for the owner of Guernsey cattle.

For these reasons, the Guernsey cow must have the preference in the mind of any one who wishes to undertake the breeding of cattle, with the hope or expectation of making improvement in the standards already established. The field is a wide one, and is now occupied by relatively few, but is so interesting and so much is being accomplished that I look to see this class of breeders become more numerous to the permanent advantage of the breed.

When you consider the Guernsey cow from the point of view of the general farmer, there seems to be no answer to the statement that she possesses superlative advantages for him. If he desires her product for his own use, he can certainly get nothing better. If he uses a part of his milk and cream and sells the remainder, there can be no question that the selling quality of the Guernsey product is far ahead of that of any other breed. I have spoken before of the superior color and flavor, and wish to emphasize the fact that in dollars and cents, this is extremely important to the producer. I could easily quote you many instances to show that where Guernsey products have once been introduced, the dairy products of other breeds have no standing in the market, and no show for sale until the Guernsey product has been entirely exhausted.

To the farmer who raises milk exclusively to sell, this additional Guernsey quality makes a strong appeal. While it is possible to obtain from a mixed herd of grades milk of sufficient quality to meet the requirements of the law, it has been demonstrated over and over again, in official trials, that

the Guernsey cow can produce butter fat cheaper, considering the cost of feed, than any other breed, and to the dairyman who desires to produce good milk at a low cost, the native cows with a proportion of the herd thoroughbred Guernseys probably ensures the necessary quality at the lowest possible cost.

It may occur to some of you that the present price of the thoroughbred cow is so great that the average farmer should undertake to get his quality in some other way. I believe we shall see, as we proceed, that this is not the case, that in this instance, the peculiar unusual condition exists, namely, that the highest quality can be obtained at the lowest cost, and I repeat what I said at the beginning, that as I see the situation, only the dairyman who is undertaking to produce the greatest quantity of milk at the lowest cost, with all considerations of quality left out, can afford to ignore the Guernsey breed.

It is conceded, I believe, that the Holstein will produce more milk than cows of any other breed, but in the case of one well known herd of thoroughbred Holstein cattle, the product so frequently falls below the required legal standard that the market for the milk is very restricted, and but for his pride in the breed, I have no doubt the owner could add to his establishment a herd of Guernseys to his great profit and advantage. If, therefore, it seems desirable for practically all classes of farmers to breed Guernseys, we may now proceed to consider how to succeed with them.

I do not know that I am qualified to speak with authority on this point, but I have been a breeder for twelve years. I have visited and inspected the herds of all classes of breeders, and have given the subject the most earnest and careful consideration. There has grown up in my mind, as a result of this experience, a very clear and a very strong conviction, and that I shall express to you, and shall give you briefly the reasons for the faith that is in me. A man will succeed as a breeder of Guernsey cattle if he will be sure of just one thing—and that is—that his herd is protected from disease. In this opinion, I probably do not agree with many authorities on this subject. I read in "Kimball's Dairy Farmer" of February 1, a description of the qualities essential in a successful breeder. These I will read to you.

"The successful breeder must have a clear, concise conception of the type he wishes to establish, and with this ideal constantly in mind must cheerfully give unlimited time and thought to the characteristics of the animals he wishes to produce. He should have a clear understanding of the "scale and points" or characteristics that go to make up the perfect animal. He should not only be a careful and impartial critic of his own herd, but should also take advantage of every possible opportunity to study the greatest individuals of the breed. He must be a man of courage and strong convictions, but big enough to admit the possibility of mistakes when made. He must be a close observer and a careful student of cause and effect. He must be steadfast in his purposes and not seek one ideal to-day and another to-morrow. Above all else, he must enter into the spirit of the game with an earnestness and enthusiasm that will make the work a matter of joy and pleasure rather than of labor."

Obviously, this gentleman has set a very high standard. Perhaps all of us who desire to raise cattle will not measure up to it, but he was speaking of the qualities necessary to success with other breeds. It is undoubtedly true that all the qualities he describes will be found useful in breeding Guernsey cattle, or in any other walk of life, and the possession of them will tend to make the success of the breeder greater, but I maintain that as conditions are to-day, these good qualities are not essential. They are undoubtedly useful in a great degree, but the ordinary farmer can succeed in breeding Guernseys without a "clear and concise conception of type," without "high ideals," without "giving unlimited time," without "a clear understanding of the scale of points," without "being a careful and impartial critic," etc., etc., etc.

I am talking to-day about a breed of cattle that possesses so many excellent qualities, and possesses them in such an abundant degree that any common farmer, busy with his daily work, and with no great amount of idle money or idle time can breed successfully, and by that, I mean profitably, if he will safeguard himself in only the one essential thing, that one thing being, as I have said, the health of his herd.

Nearly every farmer is a fairly good judge of cows. Such judgment is a most valuable asset, but it is not essential. I have seen men succeed without it. The principles of intelligent breeding are becoming better and more generally understood, and they greatly help the breeder in the development of animals of large productive capacity, and correct type, but they are not essential. You can successfully raise Guernseys without knowing anything about them. If you have once secured your healthy herd, you will, without doubt, soon be interested enough to inquire into these other things, and you will find the time necessary to give to it, and you will find added satisfaction and profit in doing it, but you must first be sure of the health of your herd. Without that, you can do nothing. With it, you are sure of success. We have seen some men of enthusiasm fail as breeders of cattle, but so far as I have learned, their failure was due primarily to their neglect of this first and only essential condition.

Now you will make a great mistake if you imagine, from what I have said, that the Guernsey cow has any tendency to disease, or is in any way more likely to be unhealthy than other cows. Such, I believe, is not the fact. The reason why health is so essential is a plain business reason. It is simply this. The Guernsey cow and the Guernsey calf are so valuable that when you lose an individual from any cause, you have lost so much money that you have made a large hole in your profit. I hope all of you heard Dr. Rich this morning tell about tuberculosis and contagious abortion. These are the enemies you must avoid or overcome. Your cows must have their calves in due season or your herd will not increase. If a thoroughbred Guernsey cow aborts, you have lost a large sum of money, anywhere from $100 to $500. If a common, native cow aborts, you may be out possibly $25.00. You see the difference. If a Guernsey cow reacts under the tuberculin test, you are a loser to the extent of from $300 to $1000, while the reaction in a common or native cow means only a loss of perhaps $50.00. So, if your operations are to be successful from a business point of view, these diseases must never gain a foothold in your herd. The protection of the health of your animals is not difficult if you know what you are about. You can keep free from disease much easier than you can get rid of it, so like many other evil things, you must be sure it does not get a foot-hold in your establishment.

The thoroughbred cow should never be mixed up with the grade herd unless you know the grade herd is free from disease. **Thinking** they are all right will not save them. You must be **sure** of it. If we have opportunity later, I shall be very glad to talk with you about the easy and practical way of looking after the health of your cows. The necessity for protecting the health of your animals does not mean a material increase in expense. Costly buildings are not required. I have recently built two small barns, each to accommodate seven cows, and the total cost for all labor and material was $300 each, and they are as comfortable in all weather, and as sanitary as any that could be desired.

To such of you as are considering the breeding of Guernsey cattle, let me say that if you have a grade herd on your farm in buildings long in use, don't buy thoroughbreds to put in with them. The common and contagious diseases of cattle are so prevalent that somewhere, hidden away in the old structure will be the germs that may prove fatal to your

plans. Build a new, cheap barn in some convenient spot on the other side of the house, or in such a locality that the two herds can be kept entirely separate, and where the cattle will be safe from any infection lingering about the old building.

Of course, you have in mind that the common and dangerous diseases of cattle are not developed spontaneously by any conditions, clean or dirty, sanitary or unsanitary. They are spread by germs of the particular disease, disseminated in various ways, but chiefly by actual contact.

If I have now emphasized sufficiently the necessity for health, it will perhaps make my point of view in regard to essentials somewhat clearer if I tell you, by way of illustration, of a recent occurrence that came under my notice. A small farmer in a neighboring state of very limited means, and I may say frankly, a man of no especial qualifications either in skill or in industry or ability, bought in 1908 two thoroughbred Guernsey heifers, and a yearling bull for $300. He has kept them and sold their product in connection with the product of his common cattle, and a few weeks ago, made up his mind, for certain reasons, to sell out his cattle and dispose of his farm. His herd consisted, at that time, of 14 thoroughbred females and one aged bull. He had kept all females ever born on the place and had sold some six or eight bull calves during this past five years at $50.00 apiece. One of the heifers which he bought at the start was a fairly good one, the other, very ordinary. The bull was distinctly second class. He was able to get for his herd when he decided to sell $3200 in cash. As they had paid their way by their product, you can see that he had realized a very substantial profit from his original investment. This I call succeeding with Guernseys. This is not a very full measure of success, but no one could call that experience a failure. The price at which he was able to dispose of his herd was a low one, because the quality of the herd was not very high. No records of production had ever been kept, and of course, no tests had ever been made. There were several very good females, some fairly good ones, and some distinctly poor; but such a herd of Guernseys will bring that money quickly at the present time.

To my mind, this incident justified my claim that the breeding of Guernsey cattle will be successful with only the health of the herd protected. In this case no expert knowledge of breeding, or even superior judgment of stock, contributed to the result. He just bought three ordinary animals and let nature take its course. You can readily understand that if contagious abortion had entered this herd, the owner would not have had fourteen females at this time, and the product of the herd would not have paid its way. Or if, when he came to sell out, a number of his herd had reacted and been thrown back on his hands, in that case, he certainly would have failed. But being sound and healthy, although of ordinary quality, a very liberal margin of profit was obtained by the owner, and I believe his thoroughbred cattle turned him in as much cash as all the rest of his place, including the tools and stock. But of course, there are all degrees of success. I hope none of you would be contented with such a result as this.

Any man contemplating the breeding of cattle who had any experience as a breeder, or any skill and judgment in selection, or even a pencil and paper with which he could write down a few figures, would have realized that if he had obtained a better bull at the start, the value of the herd would then have been very much increased. The price actually paid was $125 each for the heifers, and $50 for the bull.

If he had bought a bull for $150, the extra $100 would have been paid him back each time one of his cows had calved. That is, a bull calf which he sold for $50 would have been worth as much as his sire. A heifer calf worth $100 or $125, would have been worth at least $100 more if the offspring of a really good bull. The old saying that the "bull is half the herd" is literally true in regard to thoroughbred Guernseys and is, I believe, rather a conservative statement. With a bull of high quality, carefully selected, instead of $3200, this man's herd would have been worth $4200 to $4500 with actually no more cost or care during the years of their development. Perhaps from this we may justly conclude that after the one essential has been provided for, the first consideration that should claim the attention of the breeder is the bull for the head of his herd.

The best bull you can select is the one you want. The price must, of course, have some relation to the size of your herd, as a man with two cows could poorly afford a five thousand dollar bull, but broadly speaking, the best bull you can find is the cheapest for you in the end, no matter what he costs. With the proper number of females he will pay the extra cost in a year or two in the increased value of the calves. But how to select the best bull. There may be some difficulty about that. Ideas and standards differ, and now we begin to see what our friend in the "Dairy Farmer" meant by having a " clear, concise conception of the type you wish to establish," and the other good things he said we needed.

I am only going to tell you one man's way of figuring out this problem. Try to get a bull to correct the most obvious faults in your cows. I had some good looking young cows, but they were small producers, and one of them had a poorly shaped udder. Production was most important, so I undertook to increase that first. I found one of the largest producing cows of the breed and bought her bull calf. The sire of the calf was also from a large producing dam, so I closed my eyes to everything else and took him home. He was not a handsome calf, and but for his breeding, I should never have looked at him twice. But long-legged, slab-sided bull calves sometimes develop into good looking mature bulls. This one did, and his heifers went a long way toward confirming me in the belief that the dam of the herd bull has a very powerful influence on the production of the heifers which he produces.

After the production had been improved, it seemed to me important that the udders of the herd should be brought more nearly up to correct proportions, as there is no one feature that has a greater effect on the appearance and attractiveness of a cow than the size and shape of her udder. This time I looked for the cow having the best shaped udder to be found in the breed. She was a young cow, and not a very large producer, but extremely well bred. I overlooked the lack of production for the sake of the other.

I obtained in the heifers by this bull the udders desired, but the production in nearly every case declined somewhat from the production of the dam.

Perhaps just at this point, I may properly say a word about the relative importance of pedigrees and individuality in making selections. Again, I must warn you that I have no claim to being an authority on this subject, and I am only expressing the results of my somewhat brief experience. In buying calves, either bulls or heifers, a year old or under, while there are many points which give you a clue as to the final development of the animal, I must admit that I am not sufficiently trained as a judge to picture correctly to myself the result of the years of development. So in buying animals of this age, I depend very much on the pedigree, and if you are familiar with the ancestry for several generations, you can get a pretty fair idea of what your calf is to become. In buying mature animals, pedigree is to my mind considerably less important. You have before you the finished product. Is it what you want? You must have some ideas as to the type and quality needed in your herd, and now individuality must take first place.

We could easily occupy the entire afternoon in discussing the various types of Guernsey cows and bulls. Some lean very strongly toward the show type; others consider production everything and care little for symmetry and dairy conformation. In mature bulls, I must say that I prefer what is commonly called the dairy type. The animal with the silky hide, the loose, open structure, with good length from the hip bone to the pin bone, and good length and capacity of the body as a whole. If with this, you can get the neat, thoroughbred looking head, the fine grace and general symmetry of conformation, you are very fortunate.

Of course, I am well aware that bulls of another type, viz., the closer coupled, pony built bulls, are apt to win in the show ring, and many of them have proved excellent sires. I believe no one will claim to know exactly what physical characteristic it is that enables a bull to impress upon his female progeny the large production which is, after all, the chief aim of the breeder. I have noticed many times a relation between the size of the rudimentaries on the bull and the size of the teats on his heifers. I think it most often happens that a bull with well developed rudimentaries will sire heifers with good sized teats, and I have never yet owned a Guernsey cow with a well developed udder and good sized teats that could not be made with proper care and feeding, to produce a generous flow of milk.

In selecting mature cows, the good points are so well known and so quickly recognized by farmers and breeders that it would be useless for me to attempt to dwell upon them here. I can only say that in breeding thoroughbred Guernsey cattle, a cow with a badly sloping rump, a low tail setting, or with a pendulous udder, poorly developed in the front quarters is a thing to be avoided. No self respecting breeder will acquire an animal of this sort, and if it happens to be born into his herd, will take the earliest opportunity of getting rid of it. Carelessness in regard to these very obvious faults has held back the development of the Guernsey type, and under conditions as they now exist, they should be ruthlessly weeded out.

Now just a few words about the feeding of young stock. Many of our thrifty New England farmers have been brought up with the idea that young cattle should be kept over the winter on the least quantity and the poorest quality of fodder that can be made to sustain life, and all the time for growing and development which they should get was in the spring and summer when they could forage for themselves. This habit must be corrected, and an entirely new and different lesson learned if you are to reach any high degree of success as a Guernsey breeder.

The Guernsey in its proper development is a large cow. A good shaped cow, weighing 1200 pounds is worth a great deal more money than a good looking cow weighing 1000 pounds, and every breeder should strive to so feed and develop his young stock as to keep it constantly growing at its maximum rate, to the end that his heifers, when ready to drop their first calf, should weigh over 1000 pounds, and if possible, 1200 in every case.

Such of you as are familiar with the large producers of the breed know very well that they were cows of great capacity. In fact, it is so obvious as to need no emphasis by me, that the small and delicate mechanism cannot reach the same volume of production as a much larger and more powerful one. You measure the power of an engine by the size of the cylinder and the length of the stroke, and speaking in a general way, the production of your cow is dependent on her capacity to eat and assimilate large quantities of provender, so no theory of economy or any other theory should lead the breeder of thoroughbred stock to neglect any means at his command to increase the size and capacity of the young stock which he produces, and to develop it to its full maturity at as early an age as possible. The breeder who wishes to develop high-class heifers should forget the old time notion that a little bran with the roughage is all the grain heifers need. A heifer coming on towards two years old and with calf should receive a generous grain ration, properly balanced, of course, to produce the rapid and healthy growth of the body, but liberal in amount. The habit of heavy feeding is an important element in the development of young stock, and should be encouraged from a very early period in the life of the animal.

The feeding of young stock suggests the problem of feeding milch cows for production. Volumes have been written on this subject by men with vastly more knowledge and experience than I shall ever have, but as we are talking about plain and simple things to men who may undertake to become breeders and feeders of Guernsey cows, I may properly endorse a few general principles. The best ration for a dairy cow is, in my judgment, a very liberal one. In feeding for milk alone, the accepted rules in regard to weight of ration in proportion to weight of cow, and amount of milk produced are probably all right, but that is not a **breeder's** ration. If you wish the fullest development of body and production (and that is where your profit will be found) you must provide the feed with a generous hand.

Of course, the necessary ingredients to produce the different elements needed to build up the body and produce the milk are well understood, but there are so many things resulting to your advantage if your cow gives a large flow of milk, that you may well be liberal in providing her ration. Prof. McLean gave much useful information on this subject in his talk on Tuesday morning, and you will do well to get his ideas thoroughly into your mind.

Of course, you all know that the extremely high tests made by the cows of any breed have been obtained by the great skill of the feeder in inducing the cow to eat a very large quantity and still maintain her health and appetite. Such feeding is a fine art that we should not undertake to discuss at this time. No man who has not had years of practice and experience can ever be competent to undertake such feeding miracles as these. All I mean to suggest in this connection is that you will be wise to deal liberally with your Guernseys, as you will find that they, in return, will deal bountifully with you.

Now just a word to the farmer who thinks he hasn't the time to bother with pure bloods or hasn't the capital to invest, or who, for any reason, decides not to start breeding them. If he can make as much money on his farm in some other way with the same amount of effort, I don't know how he will do it, but if he won't undertake the task, there is one further suggestion I should like to make, and that is, to buy a pure blood Guernsey bull to grade up his native cows. The high grade Guernsey is, next to her pure bred sister, the most useful and valuable animal the dairy man can include in his herd. Her production is large, the quality of the product very high, and the animal herself in such great demand that she is equal to cash in the bank. It costs no more to raise a calf by a registered bull than by a scrub, and every heifer sired by him has an added value of $25.00 the moment it is dropped. Isn't that worth while? Can you make money any easier?

Guernsey Jottings

Willing to Help The Farmer.

Following is a copy of a letter in which the owner of Brookmead Farm offers the farmers in Chester, Montgomery and Delaware Counties, Pennsylvania, free service from a pure bred Guernsey bull. We hope as many of the farmers who can will take advantage of this opportunity to improve their herd:—Published in the West Chester Local, West Chester, Pa. Gentlemen:

I feel that a great improvement in the Dairy Cattle of Pennsylvania can be made by breeding Grade Cows to Pure Bred Bulls, especially of the Guernsey Breed.

I am breeding at "Brookmead Farm" near Devon, Pa., entirely pure bred Registered Guernsey cattle, and I have as my herd bull "Garcon de Rouvets" 16995, by Ramee Sequel 10463, A. R., a son of the great bull Masher Sequel 14462, A. R. Garcon de Rouvets' dam Imp. Clara of the Rouvets 18531, A. R. 1345, has a record of 10232.5 lbs. of milk and 521.7 lbs. of butter fat.

I have at my farm a young bull by Garcon de Rouvets "Archie of Brookmead 23018" out of Kellynchia 5th 23088, A. R. 2369, which made an Advanced Registry record for me of 9,596 lbs. of milk and 417 lbs. of butter fat. He has fine conformation, great bone and is a splendid individual. He was shown at the Allentown Fair in 1913, where he won Second Prize.

In order to encourage the Farmers of Chester, Montgomery and Delaware Counties to breed to a pure bred sire, I am willing to allow any farmer in these counties to bring his cow or cows to my Lanser Farm, where Archie of Brookmead will stand without charge. Lanser Farm is on the Devon State Road about a mile west of New Centerville.

Will you kindly publish this letter in your paper, giving it as much prominence as you can, as I am greatly interested in trying to improve the breeding of dairy cattle in Pennsylvania as much as possible.

The Barron Co. Guernsey Breeders Association.

The Barron Co. Guernsey Breeders Association held their annual meeting, March 6. After the usual business and election of officers, Mr. E. F. Luther, supervisor of all the county representatives of the state, talked on the benefits to be had from breed associations. Mr. Frank D. Otis, county representative, talked on more and better cows.

The following officers were elected for the ensuing year: President, Wm. Halveson, Rice Lake, Wis.; First Vice President, C. J. Orn, Barron; Second Vice President, W. H. Sullivan, Barron; Treasurer, Archie Nelson, Barron; Secretary, Wm. Bartlett, Barron.

WM. BARTLETT, Secretary.

A Prematurely Bred Heifer.

Pac. Dairy Review:—A few days ago, while I was away from home, the only heifer I got last spring came in heat, jumped the fence and was served by my neighbor's scrub bull. The heifer was a registered Guernsey and only ten months old. Of course, I would not have had it happen for a hundred dollars. What can I do about it? If she is in calf, and if nothing can be done, I shall have to butcher her for in my mind a heifer is ruined if she has a calf before she is 26 months old.

I have to keep my bull locked up or he would be in my neighbor's place continually, but the neighbor does not seem to mind when his bull gets through the fence and into my place. What is the law in regard to letting a bull run in a field? K. L. E.

Gilroy, Cal.

The heifer, having trespassed upon the property of the owner of the bull, relieves him of any responsibility for damages. Had the bull jumped into the field where the heifer was confined, the law would have allowed compensation for damages. There is little to be done to correct the misfortune. A skilled veterinarian might be able to safely induce an abortion. We are inclined, however, to the belief that our inquirer is needlessly alarmed over the ruination of his heifer. It is, of course, bad practice to breed a heifer at so young an age, but it is not an unusual thing for them to have the first calf at 20 months and many a good cow has passed through this experience. Being a valuable animal, we would take the chance. We would give her good care and liberal feed to induce growth and breed her late so as to give her a good rest prior to having her second calf. In this way, the damage may be overcome, and she may surprise you after all.

Words of Praise for the Guernsey.

The American Guernsey Cattle Club:

Would you care to send me a little Guernsey literature to give to the men who visit our herd? I believe I could put it to very good use for the Guernsey, myself and the farmers who take heed to it. We have a new barn as up to date as we could build it, and have visitors every day who are interested in or thinking of dairying. This section of Indiana is just beginning to take interest in dairying. We have some good Guernseys to show our visitors, having a few pure breds, and a few weeks ago bought a carload of high grade cows and heifers in Waukesha Co., Wis. Several of the grades test around 6% as fresh cows, and one fine looking cow tested 7% one week after calving, and is gaining steadily in milk over her average of the first week, which was 29 pounds per day.

We can only say words of praise for the Guernsey, for the reason that we think she is the best of the dairy breeds, and that it is to our benefit to have more Guernsey breeders in our county. P. J. L.

Report of Guernsey sale March 19, 1914, held by G. B. Helmuth, Millersburg, Ohio.

The sale was held on the farm with a great attendance and interest shown by the public. The weather conditions were against us, cold and snow all day; however, the stock was picked up quick at a good moderate price, and the buyers not supplied.

We had a large attendance of Pennsylvania and Ohio breeders; however, the stock went mostly to parties just starting in business.

1.	Elsie Glenwood 39157, sold to Eli J. Raber, Fredericksburg, Ohio.	$240.00
2.	Jonas C. Yoder, Millersburg, Ohio.	150.00
3.	Eli J. Raber, Millersburg, Ohio.	182.50
4.	Jonas C. Yoder, Millersburg, Ohio.	180.00
5.	Siman J. Miller, Grantsville, Md.	180.00
6.	W. A. Boorn, Middlefield, Ohio.	235.00
7.	E. J. Gough, Pataskala, Ohio.	200.00
8.	C. Conkle, Clarks, Ohio.	115.00
9.	W. A. Boorn, Middlefield, Ohio.	175.00
10.	C. Conkle, Clarks, Ohio.	200.00
11.	C. Conkle, Clarks, Ohio.	275.00
12.	E. F. Steiner, Orrville, Ohio.	137.50
13.	Calvin Millen, Millersburg, Ohio.	75.00
14.	A. C. Bamsire, Smithville, Ohio.	167.50
15.	A. C. Ramsire, Smithville, Ohio.	125.00
16.	W. H. Story, Dalton, Ohio.	207.50
19.	W. R. Wagner, Hartville, Ohio.	250.00
20.	A. C. Ramsire, Smithville, Ohio.	300.00
21.	A. C. Ramsire, Smithville, Ohio.	205.00

23.	G. A. Marks, Louisville, Ohio.	242.50
24.	J. A. Wells, West Salem, Ohio.	267.50

Some sixty head of grades sold from $60 to $160 each.

English Guernsey Cattle Society.

A meeting of the Council of the English Guernsey Cattle Society was held on Wednesday, March 18, at 12 Hanover Square, London, W., Mr. W. H. N. Goschen, President, occupying the chair. There were also present Mr. E. W. Amos, Mr. G. Titus Barham, Mr. G. F. Ferrand, Col. E. A. Fitzroy, Mr. John C. Forster, Sir. Henry F. Lennard, Bart., Mr. D. Michie, Mr. Godfrey Oakey, Mr. F. H. Norman, Mr. H. Fitzwalter Plumptre, Mr. Spencer Trower, Mr. A. W. Bailey, Hawkins, Mr. P. R. J. Grinham(Society's Milk Record Inspector) and the Secretary, Mr. R. F. Ling.

A letter of regret expressing inability to attend was read from Mr. J. F. Remnant, M. P.

The Council examined the proof of the Annual Report and Balance sheet, which was considered most satisfactory, and the Secretary was directed to issue same to Members of the Society in due course.

It was reported that the number of entries received for volume 30 of the Herd Book totalled 871, this being 203 in excess of those received for the previous volume.

The Council confirmed the action of the Sub-Committee in offering additional prizes at the Royal Agric. Society and Somerset County Agric. Shows.

A vacancy on the Council caused by the death of Col. Edward St. Aubyn, was filled by the unanimous election of Mr. D. C. Haldeman of the Rookery, Downe, Kent.

The following sixteen New Members were elected.

Aitken, Sir W. M., Cherkley Court, Leatherhead, Surrey.
Bevan, Hon. Mrs. David, Burloes, Royston, Herts.
Courtney, Charles, Garston, Sparsholt, near Winchester.
Courtney, R., Garston, Sparsholt, near Winchester.
Curtis, William T., Fitznells, Ewell, near Epsom, Surrey.
Eaden, J. F. Little Shelford, Cambridge.
Gardner, John, Priory House, Stroud, Gloucs.
Griffiths, William & Co., Ltd., 35-39, Hamilton House, Bishopgate, Londl , E. C.
Hambly, William, Cutlinwith, St. Germans, Cornwall.
Jacka, J., Trewidden Farm, Penzance, Cornwall.
King, N. W. R., Poles, Ware, Herts.
Lambert, H. Biddulph, Deanhill Farm, West Dean, Salisbury.
Miskin, Mrs. Edith L., Greenfields, Frindsbury, Rochester, Kent.
Mitchell, E. & Sons, Penzance, Cornwall.
Moss, Mrs. Evelyn M., Wintershill Hall, Bishops Waltham.
Valletort, Viscount, Cotehele House, St. Dominick, Cornwall.

Various communications were read and dealt with.

It was decided to hold the General Meeting of Members in the Showyard of the Royal Counties Agric. Society at Southsea on the first day of the Show.

MILK RECORDS COMMITTEE.

Sir Henry F. Lennard Bart., occupied the chair, there being also present Mr. G. Titus Barham, Mr. John C. Forster, Mr. D. Michie, Mr. H. Fitzwalter Plumptre and Mr. P. R. J. Grinham (Inspector).

Various details in connection with the working of the Society's Milk Records were discussed and dealt with.

The Committee examined the completed records to date, and same were passed for inclusion in the next volume of the Herd Book.

EDITING COMMITTEE.

Mr. John C. Forster occupied the chair, there being also present Mr. D. Michie, Mr. E. W. Amos and Mr. Spencer Trower.

The Committee examined those entries received for Volume 30 of the Herd Book requiring special consideration, and the Secretary was instructed to communicate with the various owners.

The date of closing the entries for Volume 31 was fixed for January 15, 1915, with late fees to February 1, 1915.

Imp. Galaxy's Blanche 35241
Sire Imp. Galaxy's Sequel 16904.
Dam Blanche III of The Houges Magues (R. G. A. S. 7993 P. S.)
Bred by A. LePatourel, Island of Guernsey Owned by F. J. Sherman, Ballston Spa, N. Y.

The Misuse of Type

By Dr. Eugene Davenport, University of Illinois

BREEDING to the accepted type, whatever it may be, is a commercial necessity if the breeder expects to sell his animals, and this he must do or speedily go out of business. However, that is no reason why the breeder should not thoroughly understand what is actually involved in conformity to type.

Type is the result of long-continued selection toward some definite end. If the basis of selection has been utility, then the type will be useful; if the basis of selection has been something aside from utility, then the resulting type will by that much fail of being the most useful. In other words, as long as utility is the only basis of selection, progress in the breed is possible, at least until we reach the physiological and mechanical limits of development; but whenever an accepted type becomes the standard of selection, progress ceases, except as we may breed up inferior strains until they approach this standard.

Cast in still other langauge, type is a good stick for the novice to lean upon; it is a fatal crutch for the breeder who really desires to do much with the breed he handles. Nearly all progress in animal breeding has been made by men who have ignored the accepted type and boldy set forth upon their own voyages of discovery. It is true that many such men have paid dearly for their boldness by commercial failure, for whoever undertakes to improve a breed quite independent of accepted type must have a long pocketbook and plenty of patience. The commercial hazard involved in breeding for utility regardless of accepted type is what has rendered a great deal of our breeding nothing more nor less than a continual revolving about a fixed center.

Type should be regarded like creeds in our churches,—not as the last word upon the subject, but as the best present expression of our convictions. With such a conception of type the breeder can direct his operations year by year without becoming so fossilized and fixed in his ideas as never to be able to depart from what was once the accepted standard.

Type is chiefly useful as a standard for discussion and as a convenient yardstick for measuring current operations. It is also useful in judging in the show ring or whenever snap judgment must be rendered upon the value of an individual. It is one of the most valuable indications of the probable character of an animal whose performance is not known: it is practically worthless when that performance is known.

Much is said in defense of type from the standpoint of beauty, but this is a matter which needs analysis. Beauty and utility are practically the same thing so far as the technician is concerned; that is to say, the breeder of draft horses admires weight and size, and while he talks about action, what he means by it would be ridiculed by the admirer of the roadster for the saddler. The dairyman,much as he may talk about lines of conformation, admires most of all the well-formed udder, the capacious paunch, and that appearance of eye and mouth which indicates good feeding qualities. None of these would appeal to the artist, who, we must assume, is a good judge of beauty.

It seems not to have occurred to many writers on this subject that what the layman regards as beauty among animals is quite distinct from what the breeder regards as beauty. For example, the breeder talks much about form and action,—very little about color; to the artist, on the other hand, and to the layman generally, color is the first consideration among animals. Mr. Suddenly-Rich insists that his team shall be matched as to color whether they move alike or not; whereas the horseman cares little for color and everything for action.

The artist from time immemorial has pictured horses impossible in form and still more impossible in action. Until Senator Stanford made his classic study of the horse in action and until the modern day of rapid photography, the artist invariably pictured the horse with both hind feet far to the rear and both forelegs extended in such a manner that it would be impossible for him to take another stride without falling to the ground; yet this was the artist's conventional conception of a horse in motion. was it artistic? The artist would have said, Yes, but the horseman would have said, No.

So commonly has this false picture of the horse been rendered that horsemen generally have properly poked fun at nearly all the old-time pictures and statues of their favorite animals. Where can you find in any of the older works a horse with the action of Remington's or the poise of the recent statue of Colonel Castelman's favorite saddler? By this we see that true beauty is not far from utility.

Because of this oneness of utility and beauty the breeder need not distinguish to any great extent between the two. The beauty he has in mind is the beauty of usefulness; anything further than this can easily be acquired, and unsightly angles can be polished off after we have secured a degree of usefulness which we have not yet produced in any of our domestic animals.

Again, it is to be remembered that our own ideals of beauty are exceedingly artificial. If the decree goes forth that the tail of a cow must reach her hock, then to the breeder who is thus enjoined all cows look ugly whose tails are even an inch or two short of the prescribed standard,—a matter which would be noticed by no one else except one whose attention had been called to this particular point. It is such artificial standards as this which the breeder should resist, and his resistance should be strong enough and persistent enough to prevent their fixing his ideals of type as standards for selection.

We are entering upon a new era in animal breeding. The old-time breeder posed as a kind of wizard, working by methods that were hidden and by standards which he carefully concealed. The modern breeder understands perfectly well that breeding is not a wizard's work, but that as we come to understand its principles better, it is almost a statistical problem in the handling of biological characters.

Lady Jane Bay 7982

The Only Guernsey Cow with Six Advanced Register Daughters

Owned by J. A. & W. H. Gould

Lady Jane Bay

A very interesting family of cows sprung from Lady Jane Bay 7982, the only cow in the Guernsey breed with six advanced register daughters, is found on Prospect Hill Farm, Essex, Massachusetts. Messrs. J. A. and W. H. Gould, the owners of the farm and developers of the family started breeding Guernseys in Aurora, New York, in 1898, and later became interested in producing certified milk, and in order to obtain a better market moved to North Reading, Massachusetts, in February, 1907. They raised enough feed that year to feed their stock until the middle of August, and are now carrying sixty head the year round on that farm. Two years ago, they purchased the farm they are now on, and moved their certified business and pure bred cattle to the new farm, still maintaining the farm at North Reading, however. At Essex, they built one of the finest cow stables in New England accommodating one hundred head of cattle, and are now selling nine hundred quarts of certified milk and fifty quarts of cream a day to a fancy trade along the North shore.

To return to the breeding side of the business and to the family of Lady Jane Bay 7982, she was born March 6, 1894, on the farm of S. L. Hoxie, Leonardsville, New York. She was sired by Earl of Mansell 3379, and out of Lady Bay 7903. She was sold at one year of age to B. J. Dodge, of Verona, New York, along with two other heifers of about the same age. It is interesting to note that though she was a black nosed heifer, Mr. Dodge, in order to procure her, had to pay five dollars more for her than for the other two light nosed heifers that he bought at the same time. Mr. W. H. Gould purchased her in 1902, when she was eight years old, and because of the fact that one quarter had been injured, she was never tested. She lived to be seventeen years old when she became lame, and generally broken down with age, and was killed to keep her from the misery, which an animal that had served as faithfully as she had, surely did not deserve.

During her life she produced eleven heifer calves (only nine recorded) and three bull calves. Her first calf was Lady Bay of Verona 9767, A. R. 214, by Onondaga Boy 3942, with a record of 9245.70 pounds of milk and 508.48 pounds of butter fat made at six years and eight months of age. She was the dam of four heifer calves and four bulls, one of whom is Ledyard Bay 11074 A. R., owned by Otto W. Post, Ensenore, New York, the sire of eight advanced register daughters whose records made as two year olds, with the exception of two average 521 pounds of butter fat, and among whom is Azucena's Pride 2nd 24957, A. R. 1469, who with a record of 16,203.90 pounds of milk and 855.70 pounds of butter fat holds the world's record for a four to four and a half year old animal.

Her second calf was Onondaga's Bay 10868, A. R. 323, by Onondaga Boy 3942, with a record of 8884.20 pounds of milk and 439.90 pounds of butter fat made at six years of age. She was the dam of four heifers and four bull calves, among whom was the cow Onondaga of Ledyard 15230 A. R. 775, with a record as a five year old of 6700 pounds of milk and 365.94 pounds of butter fat, and Onondaga's Ledyard 9655, the sire of four advanced register daughters.

Her third calf was Betty Bay 12129, A. R. 474, also sired by Onondaga Boy 3942, with a record of 8293.6 pounds of milk and 420.76 pounds of butter fat as a six year old. She produced only two heifer calves and one bull, and died in November, 1912.

Her fourth calf was Dorothy Bay 12828 A. R. 475, sired by Amber Boy 5628, with two advanced register records, one made at five years and two months of age of 6942.9 pounds of milk and 361.24 pounds of butter fat, and the other at nine years and seven months of age of 9755.5 pounds of milk and 483.13 pounds of butter fat. She was the dam of Dorothy Bay 2nd 30503 A. R. 2110 by Rutila's Gold Basis 7982, with a record of 6755.00 pounds of milk and 422.07 pounds of butter fat made as a two and one half year old.

Her fifth calf was the bull Chief's First 7365, sired by Yvette's Highland Chief 6360, and her next calf was a bull also, Cyrus of Verona 7961, by the same sire as Chief's First. Her third bull calf appeared the following year in John Bay 10400, sired by Cottie's Echo 10157.

Her eighth calf was Lady Jane Bay 2nd 23246 A. R. 1221, by Rutila's Gold Basis 7982, sire of nine advanced register

Lady Bay of Verona 9767

Lady Jane Bay 5th 39097

Lady Bay of Verona 3d 36531

cows and four advanced register sons. She has an advanced register record made as a three year old of 7315.48 pounds of milk and 426.42 pounds of butter fat, and is the dam of Ann Bay 30505 A. R. 2109 with a record of 5917.6 pounds of milk and 349.46 pounds of butter fat made as a two year old, and one other heifer.

Her ninth calf, Lady Jane Bay 3rd 30502, sired also by Rutila's Gold Basis 5625, has a record of 7409.70 pounds of milk and 429.62 pounds of butter fat made at two years of age. She is the dam of one two year old heifer.

Her tenth calf, Lady Jane Bay 4th 30508, was sired by Twang of Ledyard 14539, and is the dam of one heifer, Ada Bay 38755.

Her eleventh calf Lady Jane Bay 5th 39097, sired by Rutila's Gold Basis 5625, was born March 27, 1910, and is now making a nice record with her first calf.

Her twelfth calf, Lady Jane Bay 6th 39098, sired also by Rutila's Gold Basis 5625, was born September 12, 1911, and is a very promising individual.

Five of the above cows and two heifers not in milk are still on the place. Many of them have been shown and have been first prize winners in strong classes at leading fairs. This striking example of what can be obtained through careful selection and devotion to the interests of the Guernsey breed should encourage every breeder to develop not individual animals at the expense of families, but good strong individuals which will head strong families and thereby greatly aid in popularizing the breed.—H.

Ravenscroft Coronation

(Continued From Page 23)

It is thought that he has to his credit more A. R. daughters with exceptionally creditable records than any other bull of the breed.

Hayes Olive's sire, Merry Anton, has three daughters in the Advanced Register, also one daughter and two sons not in the Advanced Register, but having A. R. progeny.

Merry Anton was sire of May Day, he in turn being out of old May Rose II. It will be noted that in following back the sire's pedigree of Ravenscroft Coronation that he traces twice to old May Rose II.

The dam of Ravenscroft Coronation is Itchen Pearl III. She is a full sister of Itchen Pearl IV, A. R. 883, and Itchen Pearl IV is the dam of Langwater Pearl, A. R. 1528. The sire of Itchen Pearl III, Golden Secret already referred to.

The dam, Itchen Pearl, besides being the dam of Itchen Pearl IV, is also the dam of Itchen Pearl II, A. R. 1825, and Itchen Pearl VI, A. R. 1823. She, in turn, was sired by May Day 1122 E. May Day, as has before been stated, is a son of old May Rose II, and he had in England a number of daughters of exceptional merit; probably but three of these daughters were ever imported into this country. One of these it is impossible to locate, although there is an item in the English Herd Book stating her importation.

The second one, Itchen Daisy III, referred to in this letter, is dam of that wonderful bull, Imp. King of the May and Florham Daisy, A. R. 792, also Langwater Dairymaid, 1460. a cow that as a two-year-old made 11,782 lbs. of milk and 631 lbs. of butter fat.

The third daughter of May Day imported into this country was May Day Pearl 15195, she being the dam of Spotswood Daisy Pearl, A. R. 790, and it is doubtless superfluous to say that Spotswood Daisy Pearl is to-day the record cow of the breed, with over 18,600 lbs. of milk and 957 lbs. of butter fat to her credit.

Daisy Pearl, the dam of Itchen Pearl, is also the granddam of Spotswood Daisy Pearl; so it will be noted how close the blood lines of Itchen Pearl run with those of the present worlds champion Guernsey.

Daisy Pearl, in turn, was sired by Active Lad, 653, and Active Lad is also the sire of Daisy's Gem, the dam of Itchen Daisy III. It will be seen that Active Lad also appears in the pedigree of Ravenscroft Coronation, as the sire of Royal Rose.

Taking it all in all, individual after individual, making up the pedigree of Ravenscroft Coronation, one fails to see where there is a single weak spot in it, going back even to the fourth and fifth generations, with constant improvement as the individuals in the pedigree come in closer relationship to him.—R.

Statement of Ownership

Management, Circulation, etc., of the Guernsey Breeders' Journal published monthly at Peterborough, New Hampshire, required by the Act of August 24, 1912. Editor and Business Manager, William H. Caldwell, Secretary and Treasurer, Peterborough, N. H.; Publishers and owners, The American Guernsey Cattle Club, Peterborough, N. H. Incorporated under Special Act Connecticut Legislature. No Stock ever Issued. No Indebtedness.

Sworn to and subscribed before me this 2d day of April, 1914, E. W. Jones, Notary Public.

Breeding Young

By Norton Downs, M. D., Three Tuns, Pa.

I have always been a believer in breeding animals young, and I can see no logical argument why this should not be done. I was a very interested student in obstetrics for some time, in Leipsic, Vienna, London and Berlin, and for some years was connected with the teaching staff in this subject at the University of Pennsylvania which gave me considerable opportunity to observe this interesting subject in the human race. I have never seen any ill effects whatsoever, either in the mother or child, when the woman had her children while young in life and was properly cared for before, during and after her confinement. I have bred dogs young and with excellent results. I have bred horses young with like results, and now having turned my attention to cows, I breed them young too. The natural time for animals in their natural state to breed is while young. There are but few mammalians wherein this does not take place. The argument that domestic animals are not in their natural state is naturally true, but why they should not be bred in such a state when nature's laws are willing to be obeyed, I think is an error. The reasoning that is held out by the very large number of breeders is that by allowing an animal to reproduce before she is fully mature is that her growth is retarded, if not stopped, or that her offspring is weakly or under-sized or more pronounced evidences of faulty development. I dispute this. The wild animals that I know, which breed in captivity, as for example those confined in our Zoological Gardens in Philadelphia, both those born wild and those born in captivity, are bred when their proper season comes around without any evidence of any retrogression in their offspring

What woman is mature at sixteen or even twenty? She continues to develop until she is past forty, and yet I maintain that her children born when she is under twenty are quite the equal to those born after that age. To illustrate my findings on this question, I present the following facts.

Viola of Hoosic Reg, No. 24421.
Guernsey Cow.
Born April 10, 1908.
Sire Cragstone of Hoosic.
Dam, Naomi.
1st—Bred June 5th, 1909—To Heartily.
Calved Mar. 13, 1910..
Fordhooke Olivia.
2d—Bred June 27th, 1910—To Justice.
Calved April 7th, 1911.
Bull calf. Sold.
3d—Bred June 15, 1911—To Justice.
Calved Mar. 21, 1912.
Fordhooke Viola I.
(Bred Aug. 21, 1913.—To Sequel.)
4th—Bred June 7, 1912—To Justice.
Calved Mar. 22, 1913.
Bull—Fordhooke Aaron.
5th—Bred May 7, 1913—To Justice.
Calved Feb. 12, 1914.
Bull calf. Died of endemic diarrhoea, few days old.

It will thus be observed that this cow has had her fifth calf two months before she was six years of age.

Now let us consider the weight of these animals, upon accurate scales, taken one week ago, and I find that this cow weighs 1025 lbs.; her first calf, now nearly four years old, weighs 1050 lbs.; her third calf, now coming two years, weighs 715 lbs.; and her fourth calf, not yet ayear old, weighs 470 lbs.

Now to farther examine her productiveness, my records show that she has produced yearly, between six and eight thousand pounds of milk and the butter fat tests show 4½% or better.

And now farther—Her first Calf.
Fordhooke Olivia.
Born March 13, 1910.
1st—Bred April 7, 1911—To Justice.
Calved January 12, 1912.
Fordhooke Olivia II.
2d—Bred April 3, 1912—To Justice.
Calved Jan. 6, 1913.
Fordhooke Olivia III.
3d—Bred May 6, 1913—To Justice.
Calved Feb. 12, 1914.
Fordhooke Olivia IV.

Here it will be observed that this animal has had her three heifer calves and was yet within a month of being four years of age, while the weight of these calves does not demonstrate any diminution in size. Her first calf (bred Nov. 13, 1913 to Sequel) weighs 805 lbs.; her second calf, two months older than a year, weighs 375 lbs.; and her last calf weighs 120 lbs.

This cow has also proved a good milker, being the equal, if not the superior, of her mother.

None of these animals has received in food or attention any advantages over the rest of the herd, all receiving the same treatment even those entered for Advanced Register. I will be greatly surprised if any one can pick out, either by size, conformation or healthfulness in appearance, any of the above stock from the rest of my herd. Here is a cow, therefore, not yet six years of age, that has produced directly or indirectly, eight offspring, three bulls and five heifers, in presenting these facts to your readers, I do so with the hope that they may prove interesting and illustrative of the views I have long held, however they may differ from those of other Guernsey breeders.

Valentine III 7514 P. S.

(See Picture on Title Page)

Head of the Island Advanced Register

Valentine III 7514 P. S., (picture on title page) is at the head of the Island Advanced Register, having produced 15,475.87 lbs. milk, 783.04 lbs. fat during her test. She added greatly to her record by carrying a calf during seven months of the test, a record rarely, if ever, equalled by a cow of this enormous production. She is dam of the splendid bull Sailor Boy 2858 P. S., winner of first prize R. G. A. S. Whit. 1912; King's Cup Aug. 1912; and first prize Guernsey Farmers' Show 1913, an excellent record and a further credit to his dam.

Sailor Boy has been purchased by Mr. Frederick Phillips, and will be at the head of his annual importation of Guernseys.

My Lady Baltimore II.

My Lady Baltimore 11, 21165, the young old cow. When she finished her record of 13470.50 lbs. milk and 608.76 lbs. fat she was 15 years, 6 months and 10 days old. She is again in calf.

An example of Guernsey usefulness at an age when most cows have long since passed over the "great divide." An example of the ideal "dual purpose" cow—a breeder and producer at the pail.

My Lady Baltimore 2d 21165
Sire Fernwood Lily's Son 3931 Dam My Lady Baltimore 7829

An example of the cow that "breeds on," she has two A. R. daughters, Princess Baltimore 281185, with a record of 14954.7 lbs. milk and 658.98 lbs. fat and Princess Pomara 21189, with a record of 12621.3 lbs. milk and 651.98 lbs. fat. Another daughter is now under test. Two others have not yet freshened.

Princess Baltimore is the dam of Princess of the Chene and Susan Chene both now under test.

Princess Pomara is the dam of Julie of the Chene and Governor's Princess Pomara, both now under test.

My Lady Baltimore II was sired by Fernwood Lily's Son 3931, that sired Mara, A. R. record 9125.9 lbs. milk and 438.15 lb.s fat.

Friesolette A. R. record 10527.4 lbs. milk and 473.69 fat.

Golden Paula, A. R. record 9835.7 lbs. milk and 531.42 lbs. fat.

Emerita II, A. R. record 10976.3 lbs. milk and 599.99 lbs. fat.

Lily Emerande, A. R. record 11976.3 lbs. milk and 572.39 lbs. fat.

Average of the six records 10,986.76 lbs. milk and 537.40 lbs. fat.

Average age of the six cows 13 years, 1 month and 20 days, at the beginning of their tests.

Fernwood Lily's Son was full brother to Bonny Boy II and Lily's Bonny Boy, all three being by Bonny Boy 1097 and out of Imp. Fernwood Lily 1468. A cut of Imp. Fernwood Lily shows a very beautiful cow, with an especially good shaped udder.

Bonny Boy II, 3427 sired Paxinosa 4454 whose son Divan sired Dolly Bloom, A. R. record 17297.5 lbs. milk and 836.21 lbs. fat.

Lily's Bonny Boy 2676 sired Lily Ella with a record of 12282.7 lbs. milk and 782.16 lbs. fat and Lilyita, 12812.7 lbs. milk and 710.5 lbs. fat.

Lily Ella was the dam of Lily Ella's Jeweler 5417, six of whose daughters qualified for the A. R. and five of whose sons, including Fantasia's Jeweler, sired A. R. cows.

Fantasia's Jeweler 7259 sired our cow Murne Cowan, A. R. record 16729.3 lbs. milk and 845.1 lbs. fat. Under re-test she indicates the ability to make a larger record. She is the dam of Sweet Maria, A. R. record 12542.5 lbs. milk and 682.86 lbs. fat. Fantasia's Jeweler was full brother to Belle Vernon Jeweler.

Belle Vernon Jeweler 9396 sired eight cows whose records average 10451.6 lbs. milk and 514.57 lbs. fat. One of these, Cottina, now under re-test is making a record which will materially increase this average.

Further evidence that the old cow inherited her abilities is shown by the fact that her half sisters are reproducing through their offspring the good qualities of the family.

Emerita II, is the dam of Governess of the Chene and Rita Spotswood, both now under test.

Golden Paula's daughter, Golden Paula II, was never given an opportunity to make an A. R. record but her daughter Pauline Spotswood is now making a good record and is in turn the dam of the Champion three year old heifer of all breeds, Jehanna Chene, 16079 lbs. milk and 864.67 lbs. fat.

Fernwood's Hyacinth, 21163 produced 3677.0 lbs. milk and 187.5 lbs. fat in 184 days from half her udder (the other half is entirely destroyed) at 13 years and 1 month old. She, in turn, is the dam of three A. R. cows.

My Lady Baltimore II is today the picture of health and bids fair to last for several years to come.

Has any other cow of any breed made a record to equal this, age considered?

ANNA DEAN FARM, Barberton, Ohio.

READY FOR DELIVERY

Volume 28, of the Herd Register

Including Bulls, Nos. 24001 to 27000 Cows, Nos. 43001 to 48000

A. R. Nos. 2101 to 2500

Alderney News

States Annual Bull Show.

This, perhaps the most important show of the year, and the first, was held Wednesday, April 1. From time immemorial the show has been held on this day. The venue was the old brickfield, kindly lent by Mr. W. H. Mignot. Farmers now take a keen interest in their stocks. It pays them to do this, and the male animal is of the greater importance. On Wednesday's decision much depends.

Class I brought three animals into the ring. Old Colonel 95 came in the pink of condition, and is certainly a bull of some repute. He shows well, and has the points necessary for breeding. Nelson of the Cacheliere 174 is also a fine made animal, full of colour, and is the son of a really fine cow.

In Class II, Governor of Balmoral 151, out of Beauty 492, easily came first. For his age he certainly looks well, being long in body, short-legged, and well nurtured. Prince II of Tamworth 175 promises well in the future. He has the points which when developed will make him a valuable animal. He comes from one of the finest strains in the Island. Vincent of the Cacheliere 182 is a very likely animal, strong in points, yet not so well nurtured as he might be. If given care and feeding, he should make a really valuable bull.

In Class III only two bulls were shown, and these were not sufficiently promising for any encouragement to be given to the owners to keep them.

Class IV brought out an interesting bunch of animals. Raymond of Blaye Farm 191, out of a very likely cow; Lord of the Isles 185, out of the Mabel strain, and Nelson II of the Cacheliere 184, being the choice.

The Committee seemed to pay great attention to the dams, provided of course their sons were worthy of that attention, and on the whole their judgment was certainly sound.

The awards were as follows:—

CLASS I.

(Three years and over).

1, Colonel 95 (Mr. A. LePoidevin); 2, Nelson of the Cacheliere 174 (Mr. P. Gaudion).

CLASS II.

(Two years and under three).

1, Governor of Balmoral 151 (Lieut. C. G. Fellows); 2, Prince II of Tamworth 175 (Mr. J. Sebire); 3, Vincent of the Cacheliere 182 (Mr. P. Gaudion.

CLASS III.

(One year and under two).

No awards made.

CLASS IV.

(Six months and under 12).

1, Raymond of Blaye Farm 191 (Mr. W. P. Duplain); 2, Lord of the Isles 185 (Mr. Wm. Odoire); 3, Nelson II of the Cacheliere 184 (Mr. H. Mignot).

The Judges were Messrs. H. Odoire, W. Mignot, N. Renier, and J. T. Simon (States mebers); J. B. Simon and N. Simon for the R. A. A. S. The President of the Committee was Mr. N. W. Gaudion.

GIFT OF A CATTLE TROUGH.

Article VI asking that permission be granted Mr. N. Barbenson to erect a cattle trough for the public use on property belonging to the States at the Rose Farm bend of the Grand Val road, and to make other improvements thereat, at Mr. Barbenson's expense, was agreed to.

CATTLE.

A further consignment of cattle was sent to Guernsey on Thursday, mostly from the York Villa and Tamworth farms. Messrs. P. Gallienne and Cyril McKane, of Torteval, were the purchasers.—Guernsey Press.

Guernsey Meeting at Downingtown, Pa.

A very interesting and instructive Guernsey Meeting was held in the Opera House, Downington, Pa., on the evening of April 8, 1914, under the supervision of the Eastern Guernsey Breeders' Association. This meeting was to give the Farmers of that section an opportunity to learn of the merits of the breed. The weather was not favorable, but the Meeting was largely attended and a great deal of interest manifested. Prof. Harry Hayward, Director of the Delaware College of Agriculture, spoke; after which the slides prepared by the American Guernsey Cattle Club were shown, all of which were received with a great deal of interest and the Eastern Guernsey Breeders' Association is to be congratulated on the success of the Meeting, from which much good should come.

M. T. PHILLIPS.

ADVANCED REGISTER RECORDS COMPLETED AND APPROVED TO APRIL 15, 1914.

Jehanna Chene 30889, A. R. 2588, owned by O. C. Barber, Akron, Ohio. Record:—16186.70 lbs. milk; 863.36 lbs. b. f. 3 yrs. 5 mos. old.

Waukesha Guernsey Sale

The Guernseys for the Fifth Annual Sale of the Waukesha County Guernsey Breeders' Association have just been selected by a committee representing this organization. The animals secured for the annual event compare very favorably with those of last year, and we hope will do considerable in extending the fame of Waukesha County and the Guernsey cow. There are several cows, which have large official records. The entire offering with very few exceptions, consists of animals which are not only good individuals, but strongly bred in the better families of the breed. To give an idea of the lines of breeding we might mention a few of the sires which are represented in the pedigrees, May Rose King, Glenwood's Stranford, Lord Waukesha, Princess Jewel, Strong Anchor, King of the May, Governor of the Chene, Lord Yeksa, Rhea's King of the May, and others which are noted.

The 1914 Sale will be conducted on the same plan as the 1913 sale of this Association, and there are several unique rules, which will be in force. The Association guarantees every animal in regard to health, and the consignors are responsible to the Association. There is also a rule which absolutely prohibits any by-bidding, and prevents consignors from bidding on each others animals.

The breeders of Waukesha County are continuing their effort to further the reputation of their annual sale by selling some animals through this sale, which could not be secured at private treaty.

We extend a hearty invitation to breeders from all parts of the country to attend one of the big Guernsey gatherings of the year, which will be held at Waukesha, on May 20, 1914.

GAVIN MCKERROW, Secretary.

Glenburnie Guernseys

A Few Choice A. R. Cows For Sale

To Guernsey Breeders:—

Glenburnie Guernseys have demonstrated their ability as producers. Every cow old enough has qualified for the Advanced Registry, most of them with high records and three of them in one year admitted to the "Blue List." Up to the present time, I have sold no choice cow, but I have reached the limit of which my farm is capable. Inasmuch as some must be disposed of I now offer for sale three or four from the following list:

Name	A. R. Number	Class	Milk lbs.	Fat lbs.	
Indian Belle	22275	A	11797.20	490.92	
Oneida Belle	24985	E	11183.30	572.94	
" "	Re-entry	B	14000.	700.	estimated
Cayuga Belle	29774	G	9820.55	469.27	
" "	Re-entry	G	5102.10	232.17	113 days
Glenburnie Belle	2 yr. old heifer beginning A. R. Record.				
Glenellen	24984	E	9431.00	515.04	
"	Reentry	B	6029.90	305.32	143 days
Glenburnie Girl	2 yr. old heifer milking 40 lbs. a day.				
Brightness of Glen Glenburnie	30742	G	10080.00	553.28	
"	Re-entry	D	13300.00	720.00	estimated
Brightness 2nd of Glenburnie.	2 yr. old heifer now beginning record.				
Imp. Granny 7th	34947	F	9081.85	437.58	
" " "	Re-entry	E	5118.80	233.22	111 days
Imp. Glory 2nd	34946	C	10314.60	554.31	

In this list are two or more representatives of three different families,all of them good individuals and high producers, and two imported cows of high rank, one of them a daughter of Golden Noble 2nd The quality of these cows, proved by their performance, justifies high prices—from $1000 to $3000 each according to the selection and family grouping. I invite inspection at any time, and will consider a proposition for any combination that suits the buyer.

My farm is situated three miles from Peekskill and about one hour from New York City on the New York Central R. R.

I have two Bull Calves for sale, sired by King Masher 11084, out of Indian Belle and Glenburnie Belle. Price $250 and $150 respectively.

JAMES E. RUSSELL

Box 96, Peekskill, N. Y.

New York City address: Columbia University.

Bob Rilma 16141

Bulls in Service

Imp. Holden IV. 12179 A. R.

On sires side a direct descendant of Governor of the Chene through Golden Hero of l'Etiennerie.

Two daughters of Holden IV recently sold at auction for a total of $4200.00. Sire of Miranda of Edgewater 30970, A. R. 2363. Record 14617.30 lbs. milk. 730.49 lbs fat. Class E.

Gay's May King 19731

Sire May Rose King II 13130 A. R.
Dam Gold Dome's Lady Gay 28325
Now on official test

This bull was shown at all the leading Guernsey shows in the Middle West last season and defeated every bull in class he showed against.

FOR SALE

Bob Rilma's Superior 27337

Dropped Aug. 29, 1913

Bob Rilma 16141. Jr. Champion National Dairy Show 1912. Only living son of May Rilma 22667.
Barmouth of Pencoyd 1059, A. R.
May Rilma 22667, A. R. Record cow of breed. Will make between 1000-1100 lbs. fat in a year.
Bell Daisy of Sarnia 35668. 1st Prize National Dairy Show, 1912.
Imp. Galaxy's Sequel 16904, A. R. 16 daughters in list.
Imp. Patricia of Sarnia 40235. A half sister of Hayes Rosie.

Holden's Glenwood Boy

Dropped Oct. 4, 1913

Imp. Holden IV 12179, A. R. Own brother to Imp. Ninette of the Prevosts 22713, A. R. 879. Record: 646.4 lbs. fat. Was a noted prize winner, 1911, 1912, 1913.

DES MOINES, IOWA

Golden Cherry 5118 E. G. H. B.

The picture which forms our cover illustration this month is that of the English Guernsey, Golden Cherry 5118. It is generally supposed that she was bred on Alderney, but she was registered in the R. G. A. S. herd book as 2124 F. S., and owned by H. M. Ozanne of Lilyvale. She is now owned by Mr. Hambro in England. She has an interesting record as a prize winner, and is also said to be one of best type Guernseys of the present day.

PRIZES WON.

3d prize 2d class cows R G. A. S. Whitsuntide 1901.
H. C. Tunbridge Wells 1901.
1st prize B. & W. E. Bristol 1903.
2d prize Tunbridge Wells 1903.
2d prize B. & W. E. butter test 1903, 1 lb. 13¼ oz. butter.
2d prize Tunbridge Wells 1905.
R. & H. C. R. A. S. E. Park Royal 1905.
H. C. Milk Yield Park Royal 1905.
1st prize B. D. F. A. Islington 1909.
2d prize B. D. F. A. Islington 1910.
1st prize B. D. F. A. Islington 1912.
Reserve B. D. F. A. Islington 1911.

Her daughter, Hayes Golden Cherry 2d 6164 E. G. H. B., was sired by Coronation King 1556 E. G. H. B. She won
H. C. B. & W. E. Nottingham 1905.
1st prize at Croydon 1906.

Her daughter, Hayes Golden Cherry 3d, 6900 E. G. H. B., was sired by Hayes Royal 1674. She won
3d prize R. A. S. E. Lincoln 1907.
1st. prize B. & W. E. Newport 1907.
2d prize Royal Counties Maidenhead 1907.
2d prize Tunbridge Wells 1907.
1st prize Hastings 1907.
2d prize Tunbridge Wells 1908.
1st prize Chichester 1908.
1st prize B. D. F. A. Islington 1908.
1st. prize B. D. F. A. Islington 1908.
2d prize Sussex County 1910.
1st prize B. & W. E. Bath 1912.
1st and special prize R. C. Guilford 1912.
2d prize butter test B. & W. E. Bath 1912.

She was purchased in the spring of 1913 by W. W. Marsh and died at his farm of blood poisoning in the fall of 1912.

Hayes Golden Cherry 4th 6901 was sired by Coronation King, out of Hayes Golden Cherry, a daughter of the old cow. She won
Reserve and H. C. R. A. S. E. Lincoln 1907.
2d prize B. & W. E. Newport 1907.
V. H. C. R. C. Maidenhead 1907.
1st prize Tunbridge Wells 1907.
Reserve Hastings 1907.
3d prize Tunbridge Wells 1907.

Looking Backward

DURING the past year, few months have passed when changes were not made in our list of Class Leaders. New names have had the honor, temporarily of appearing, only to be replaced by new claimants. Of the thirty-five composing this honor roll, only eighteen cows, just one half the number, have been able to continue throughout the year, most of them in varying positions, so far as rank is concerned. There are fourteen new names in this April list that were not there last year.

This is encouraging to new aspirants for honors, for what is possible with one is with another. It is the head of the class that is most difficult to dislodge and three of the number (really four) have a lead of over one hundred pounds ahead of their nearest competitor. With three thousand records to compete with, the difficulty and the honor steadily grows. On the other hand, with the increasing number who are entering cows, it is practically certain that among the thousand now under test there will be a fair proportion of winners. A cow recently started in Ohio has just broken the Guernsey record for milk production in a day, a week and a month. More expert knowledge in selecting, breeding and feeding, the natural result of Advanced Register work, is bound to show results in larger records.

The writer has long felt that one of the most important factors in the production of high records has not been given due importance and credit. The cow and the feed are absolutely essential, but the most powerful engine and the highest grade coal would accomplish little without the skilled engineer. After all, it is the faithful, intelligent man on the job for three hundred sixty-five days and nights (Sundays and holidays) cooperating with the cow, watchful of her comfort, wishes and whims, who is deserving of praise, and whose name should be known in connection with every large record. We know the trainer who drove the winning horse across the wire. Is less skill needed to handle a record making cow?

We are all justly proud of the great record made by Capt. E. B. Cassatt's cow May Rilma 22761, and it is a great honor to have bred and to own such a maker of history among dairy cattle. The man who has had immediate charge of May Rilma throughout the long year is known to but very few. It is fitting that he should be introduced by Capt. Cassatt, and we take special pleasure in quoting from his letter of April 8, in which he writes as follows:—"We have thus made the world's record for one

The Advanced Register of Guernsey Cattle

SPECIAL NOTE This list contains the latest credits and totals for the several cows entered in The Advanced Registry work so far as same has been checked up and verified at the time the list is put to press.
Any omissions or back credits given signify that either data has not been received in time, or was held up pending verification. In such instances they will appear in next list published.

year in butter-fat, and I hope the cow will improve this by ten or twelve pounds during April.

While of course it is the cow herself that has done this wonderful thing, the most important of human assistance she has received during her record is the devoted, painstaking and intelligent care exercised by Albert Van Tuinen, our head dairyman, who has had entire charge of her with but very little interference by either Mr. Colgan or myself.

It is to him, therefore, that ninety-nine percent of the credit is due, and I am glad to accord it to him.

In any publicity that may be given the feat, it will be not only just and fitting, but extremely gratifying to me that the full measure of praise be given to Albert Van Tuinen."

At another time it is planned to call attention to some of the men, known to but few, who have been closely identified with and carried notable records through to a successful finish.

TRANSFERS OF GUERNSEY CATTLE.

From March 10 to April 10.

Adonis's Glenwood of Sunnyside 28390, C. A. Balcom to William Swartz, Latchie, Ohio.

Alexander of Millegrove 28338, S. L. Woodward to Carl Gaut, West Newton, Pa.

Alice's Guernsey Boy 28355, H. C. McCamon to T. E. Brinker, Lisbon, Ohio.

DE LAVAL CREAM SEPARATORS

are the cheapest as well as the best

LOOK AHEAD!

DON'T TRY TO SAVE $10.00 TODAY if it means a loss of 25 cents a day for all the years a cream separator may last you.

THAT'S JUST WHAT YOU WILL do if you buy a cheap or inferior cream separator simply because its first price is a little less than that of the De Laval.

WHEN A PRUDENT MAN BUYS A cream separator he knows that what he is really paying for is not just so much iron, steel, brass and tin, whether it is called a separator or not.

WHAT HE WANTS IS A MACHINE to perform a certain service, and he must be sure of the machine doing the work for which it is intended as thoroughly and with as little effort as possible on his part.

THOUSANDS OF BABCOCK AND other tests have proved that the De Laval skims closer than any other cream separator under any conditions, and particularly under the harder conditions always experienced at times.

JUST THINK WHAT A LOSS OF AS little as 10 cents worth of cream at each skimming means to you in a year—twice a day for 365 days—over $70.00, and with as many as ten cows the cream losses alone from an inferior separator usually amount to more than this.

CREAMERYMEN, WHO ARE DEpendent on their separators for business success, have long since found out the difference between De Laval and other separators, with the result that De Laval factory separators are almost universally used the world over today.

DE LAVAL SEPARATORS ARE identical in all sizes, for one cow or a thousand, and the differences between separators are just the same with the smallest machine and the largest. They mean as much relatively to the little as the big user.

THEN THERE IS THE SAVING IN labor because of the easier running and greater capacity of the De Laval over other machines and the less care required in cleaning and adjustment, worth at least 10 cents a day.

AND THERE IS THE INDISPUTable fact that a De Laval machine lasts from ten to twenty years as against an average of from two to five years in the case of other separators, or five times the average life of competitive machines.

THESE ARE THE REASONS WHY De Laval Separators are cheapest as well as best, why thousands of other machines are yearly being replaced with De Lavals and why their use is rapidly becoming as universal on the farm as in the creamery.

IT SHOULD BE REMEMBERED, moreover, that if first cost is a serious consideration, a De Laval Separator may be bought on such liberal terms that it will actually save and pay for itself, as many thousands of them have done.

These are all facts every De Laval local agent is glad of the opportunity to prove to any prospective buyer.

If you don't know the nearest De Laval agency simply write the nearest main office, as below.

Composition:

Eagle Distillers Dried Grains, Choice Cottonseed Meal, Old process Linseed Oil Meal, Winter Wheat Bran and Middlings, Pure Hominy Feed, Malt Sprouts, ½% Salt.

Dewey's Ready Ration gives satisfaction. Every dealer to whom we have sold it has repeated on his order after a sufficient length of time had passed to give it a test. There has not been a single complaint as to its quality since we began making it. This we consider as high a recomendation as any feed could have. Dewey's Ready Ration practically sells itself, and you may know that it is a mighty good feed to do this. Ask your dealer for Dewey's Ready Ration, or drop us a line and we will send you a sample and full particulars.

We also put out Three D Grains (Dewey's Distillers Dried Grains.) The highest and best quality of Distillers Dried Grains are put out under this brand. We can load mixed cars consisting of mill feeds, corn, oats, corn goods, distillers dried grains, cotton seed meal, oil meal, hominy feed, etc. Get our prices before placing your order elsewhere.

Thick Cream

The advantages of thick cream over thin cream are many and very important.

Thick cream contains less milk, consequently, less souring elements and therefore will keep sweet longer.

Thick cream is less in bulk and therefore more easily and cheaply transported.

Thick cream causes less loss of butter fat in churning.

Thick cream leaves a greater quantity of the skim milk at home to feed to calves and pigs.

Thick cream brings a higher price—many creameries give from **two** to **five cents more** per pound for butter fat from thick cream than from thin cream.

At a demonstration of cream separators at the Iowa Agricultural College, January 8th, 1914, the

UNITED STATES

CREAM SEPARATOR

separated cream that tested **47 per cent.** butter fat. The next nearest competitor tested **33 per cent.** butter fat and the second nearest tested **26 per cent.** butter fat.

The **United States** is the only separator that can separate thick cream and separate clean. Others, in attempting to equal it, clog or leave cream in the skim milk.

The **United States Separator** has a record of **65 per cent.** butter fat and made perfect separation, as shown by the skim milk test and holds

The World's Record for Close Skimming

in **50** consecutive tests run for **30** days with **10** different breeds of cows.

UNITED STATE DEPARTMENT OF AGRICULTURE
Bureau of Animal Industry
Washington, D. C.

December 20, 1913.

Mr. Thomas F. Ryan,
Oak Ridge, Va.

Sir :—In accordance with your signed agreement with this Bureau, the regular annual retest with tuberculin was applied to your herd of cattle by Dr. C. E. Lindburg of this office upon Dec. 12 and 13. As a result of this retest your entire herd of 65 cattle was regarded as free from tuberculosis.

Very respectfully,

R. W. HICKMAN,
Chief Quarantine Division.

OAK RIDGE GUERNSEYS

19 Cows in Advanced Registry

13 are American bred (1 with first calf) and average 9,892 lbs. milk; 481.3 lbs. fat.

6 are imported (2 with first calf) and average 8,863 lbs. milk; 465.8 lbs. fat.

The 19 average 9567.3 lbs. milk; 476.2 lbs. fat, equal to 556.2 lbs. butter.

These records were all made by us within the last three years, and by cows that are today working in our herd.

OAK RIDGE, VIRGINIA

THERE IS NOTHING

That adds more to the appearance of the head of an animal than to have a pair of

SYMMETRICAL HORNS

If you wish to go into the show ring and WIN attention to this one point may mean the difference between success and defeat. It is unnecessary to have an ugly horn on your cattle you can train them by using a

Herrick Horn Trainer

They are now in regular use by the most successful breeders and exhibitors all over the country.

$1.50 each; $6 for a Set of Four Sizes

L. F. HERRICK, 405 Main St., Worcester, Mass

Efficiency of the Dairy Cow.

The dairy cow can often be brought up to a high degree of efficiency by some very simple means. The persistency of the milker will pay well for all the extra time spent. Try to make the cow think she has not given enough, and she will set about to make it up next time. A little milk left in the udder will make her think she is giving more than she is expected to, and at the next milking she will not have quite so much for you. There is a great difference in the per cent of butter fat in the first and the last milk drawn. The first will sometimes be as low as 1 per cent, and the last has been known to run as high as 12 per cent. It pays to work for the strippings. The manipulation of the udder will often result in the increase of a pound of milk. This is usually done after the milker has secured all the milk he can, by taking the teat in the hand and pushing the udder up close against the body, repeating this about three times with each quarter. Then take each quarter in turn between the hands, with the hands close to the body, and rub down. The extra milk secured at a single milking may not pay for the time, but it will stimulate the cow to give that much more at the next milking without extra work. Here is where the profit will come in. We all know that a cow with which the calf is allowed to run will very soon adjust the flow of milk to the needs of the calf, and it is equally true that the dairy cow can and will increase the milk flow if encouraged by the milker. Get all the strippings.. It will pay.—E. P. Clement, Country Agriculturist, Colorado.

Where the Dairy Heifers Go.

The writer recently spent a day at the Union Stock Yards at Chicago. On the day I called, there were over 3800 calves on the market. Of this number of "veals", I estimated that from 35 to 40 per cent were heifers. More than one-half of these heifers showed a very pronounced dairy type in general characteristics. Hundreds of these calves showed strong Holstein, Guernsey, or Jersey color markings, and very many of them from their outward appearance would have been much admired on any farm where pure-bred animals only are produced. I could not refrain from contrasting these little heifers, which showed that they carried a lot of good blood (education), with the thousands of sorry looking scrubs that I have seen in pastures and dry lots in various parts of the country.—H. T. Morgan in Live Stock and Dairy Journal.

Raise More Cows.

We say to dairy farmers that there was never a time in the world's history when the market prospect was as encouraging for the raising of cows to sell as now. The demand is ahead of the supply and is likely to continue so. What is very significant is that cows are decreasing in the dairy districts of the East. So much so, indeed, that Boston is obliged to send 400 miles for her milk in some cases, while there is a falling off in the supply and the number of cows in the nearby sections of New England.

But right along with this increase of demand for cows runs a demand equally insistent that they be well bred cows. Not pure-bred, but cows from registered sires of the dairy breeds. That is the market demand. Any farmer can see in which direction the wind lies by noting that the buyers don't want his Shorthorn or Devon grades, nor indeed his native cows even if they are good ones. Just why a farmer will persist in raising such cows in face of the strong demand for Holstein, Ayrshire, or Guernsey grades for market milk purposes is amazing.

But for the man that notes the signs of the times, who exercises good business, as well as dairy, sense, and provides himself with a sire of strong dairy prepotency, there is no better business today than the raising of desirable cows. There is no prospect of a falling off in the demand. The indications are all the other way. With good corn ensilage, pasturage, and clover or alfalfa hay, a heifer can be raised cheaply and well to cow age. It is a good chance to turn your grass, coarse fodder and all, into good money at a profit.—Hoard's Dairyman.

The Guernseys as a dairy breed are fast becoming popular in Indiana. The number of breeders have more than doubled since 1911, which indicates that the Guernsey with her excellent qualities and superior records are rapidly being recognized. This, with the interest that is being taken in the herd testing associations organized by Purdue throughout the state, is a sure indication that Indiana dairymen are waking up along the lines of herd improvement. The demands for pure bred bulls of the four main dairy breeds, namely Ayrshire, Holstein, Jersey and Guernsey, are increasing gradually. This followed by a more liberal use of the scales and Babcock tester, will insure greater prosperity and success for these dairymen.—Ind. Farmer.

August Krumheuer & Son's Herd Sold at Auction.

The dispersion sale of the Guernsey herd belonging to August Krumheuer & Son of Fort Atkinson, Wisconsin, was considered very satisfactory by both sellers and buyers. Although the weather was extremely cold a large crowd of Guernsey breeders was present. Several states were represented, but most of the herd remained in Wisconsin.

The eighteen head of pure-bred animals brought an average price of $288.88 apiece. Weven, a three-year-old granddaughter of Starlight's Escelsior, topped the sale at $435.

This entire herd was the progeny of one cow, Miss Koshkonong. Her daughter, Miss Normandy, over ten years old, and six of her daughters were sold in the sale for $1,975. Unfortunately, a 5-year-old daughter of this cow, sired by Starlight's Excelsior, and the best cow in the herd, died a few days prior to the sale. The sale of this family is a demonstration of the value of a good foundation cow.

None of the animals sold had A. R. records, but they were well grown, and in good condition. A number of grade cows were sold, the highest price for grades being $170.—Hoard's Dairyman.

For the farmer who has a good store of ensilage and alfalfa hay, there is a chance to make a good profit by going to the Chicago Stock Yards and selecting a nice bunch of those heifer calves and raising them for future cows. He would need to keep the breeds separate, for they would sell better. Mate them with a first-class sire of their own breed when 16 to 18 months old and make a business of turning off a nice bunch each year the same as the beef men do with steers. Such a heifer, if tuberculin tested, will sell at a steer price when bred and the cost of her feed will be very much less. Hundreds of men in the West are looking for just such chances.—Hoard's Dairyman.

Dr. Park Weed Willis, with offices in the Empire Building at Seattle, is building up a fine young herd of Guernseys on his farm near Redmond. Dr. Willis has secured one of the best sires that money could buy and his crop of calves shows that he has started right. In a future issue we will give the details concerning the sire of this herd and the pedigrees of some of the foundation animals. He has three or four good young bulls to offer for sale just now and those in need of one should write him at once. The front cover of this paper carries the picture of two of these calves, sired by Imported Sequel of Sarnia.—Pacific Dairyman.

The Value of Color.

For a long time, argument raged regarding the relative nutritive values of dark and light colored eggs. Chemists tested carefully, and their conclusions were that there is no essential difference. Recently we read of a farmer who was convinced that yellow corn is more nourishing than white, and that the yield varies. Chemists again decide that there is no difference in the nutrition each contains. There is no nutritive difference between a red apple and a green one. The color of a cow does not affect her milk-giving qualities.

Nevertheless, color does have a decided value. The color of the cow or the hog is an index to the initiated as to the animal's ancestry and breed. But the chief value of color to the producer is in the way it affects sales.

Everybody has some feeling regarding the color of his food. Else why does butter coloring have a market. Some people prefer a white egg for breakfast; others believe the brown ones are "richer." To some yellow corn looks more nourishing than to others. The chickens with yellow legs stand a better chance than the one with a blue tinge to its limbs.

Fortunately, tastes vary. In England, the red apple is a favorite. In Germany, a green apple is preferred. In England, red celery of large size markets higher than the bleached celery so popular here. The farmer who seeks the highest development of his business must study his market as well as his land and stock. If your customers would relish milk from a brown cow better than a white one, it is an item to be considered. People pay for their peculiarities of taste.

We do not sell our products to chemists but to people with whims and notions. Some like one color and some another. Study them and find out what will sell to the best advantage, and you may make the pigment cells of real value to you.

You cannot take something from your soil and leave it as you found it. That sounds absurdly true, but a good many farmers try to do it. They believe that by some strange alchemy, rotation of crops will restore fertility. Crop rotation is very important, but the fact remains that if you subtract, the result is less than the original sum. You have to feed land, just as you have to feed a cow, it is is to produce steadily. In some parts of Europe the soil has been tilled for hundreds of years, and it produces more now than it did at the beginning. In fact, some authorities say that land should be worked for at least two hundred years before it can be expected to reach its proper condition. Stock furnishes the simplest and best way of returning fertility to used land.—The Rural Spirit.

Holstein—Guernsey Cross.

C. R. Pierce Co., Wis., writes: "Please let me know what the results would be in crossing Holstein cows with a Guernsey bull."

There is no authority on dairy cattle today whom we know of who recommends crossing breeds. It is a point upon which all judges seem to agree, that the different breeds should not be crossed. One of the chief reasons for it is that, when a cross is made, the result will be a mixture for generations and no improvement is secured in production or vitality. There is much lost and nothing gained. When common cows are used for foundation stock, bred to a pure-blood dairy sire, the common stock ceases to show after the second or third cross and the grades come to have all the appearances of the breed of the sire. There is something gained in appearance and in quality. Now, in such a case as that suggested, breeding Holstein cows to a Guernsey sire, both breeds are strong and both will transmit their color and the result is something that is neither a Holstein nor Guernsey. It would not be so bad if this ended with the first cross, but it does not. A mixture of the two colors will crop out at almost any time in later breeding. A man who is satisfied with just a "cow" will not care what the color is, but a man who is breeding Guernseys wants cows that will pass for Guernseys and if he is breeding Holsteins he wants cows that will pass for Holsteins. Yes, but some one will say: "when you cross the Holstein with the Guernsey or Jersey won't you get the large quantity of milk given by the Holstein and the richness of the milk given by the other breed?" Why is it not just as apt to work the other way: milk with the per cent of fat of the Holstein and the quantity of the other breed? No, we would advise either to keep on with Holsteins or to sell all and keep only Guernsey cows with the Guernsey sire. —The Farmer.

List of Advanced Register Sires

Corrected to Mar. 1, 1914

Advanced Register Sires. The following list of Guernsey Bulls contains all those who are the sire of two or more females in the Advanced Register.

The list shows the number of sons and daughters that have been registered to each Sire given in the list as they appear in the Herd Register of the American Guernsey Cattle Club. All of the progeny which are in the Advanced Register will be found arranged alphabetically either in the list of A. R. Sires or Producing Dams respectively, with the dates regarding them given in detail.

The names of those who are not imported, but are registered in the herd book of the English Guernsey Cattle Society or the Royal Guernsey Agricultural Society (Guernsey and Alderney branches) appear in Italics.

Ace of Hearts 7119, A. R.
Sire, Honey Dew's Comus 5658; Dam, May of Maple Glen 4th 7864.
Born Sept. 30, 1900. Bred by C. C. Taylor, Lawtons, N. Y.
Sold Dec. 6, 1901 to S. P. Boles & Son, Colliers, W. Va.

Progeny.	Record Lbs. Milk	B. Fat
